

J. Cabrinha

The art of making kites is a centuries old craft. At Cabrinha we put our own high tech spin on this craft by incorporating the most cutting edge technologies and materials available today. Yet, despite the fact that our kites are built with such exact tolerances and precision, each and every kite we make is still built by hand by the most experienced kite craftsmen and women in the world. The craft of making kites that fly perfectly is one half science and one half art. Starting with the conceptual design and ending with the final quality control sign-off, each step of the build is a hand touched, hand crafted kite.

KITE OVERVIEW

SWITCHBLADE PERFORMANCE FREERIDE / CROSSOVER

Rider Profile: The discerning rider who will crossover from freeriding to freestyle to surf on any given day. High performance, versatility, and build quality are at the top of their list.

DRIFTER SURF KITE

Rider Profile: For surfers who want the absolute best kite for surfing and surf freestyle.

RADAR VERSATILE FREERIDE / CROSSOVER

Rider Profile: A simple, versatile performance kite with incredible relaunch capabilities.

CHAOS FREESTYLE / WAKESTYLE

Rider Profile: For riders who need the highest performing technical freestyle kite.

VELOCITY FREERIDE / RACE

Rider Profile: For riders who want the ultimate power source for racing or high end freeriding.

CONTRA PERFORMANCE LIGHTWIND

Rider Profile: Any rider looking to extend their game into the light wind arena.

C-SHAPE KITE ADVANTAGES

- + FAST TURNING
- + POWERFUL UNHOOKED
- + KITE LOOPING

KITE TECH

Double Ripstop

Developed specifically for kitesurfing. Highly durable and low stretch in warp and weft. Excellent recovery on the bias. All Cabrinha kites are 100% 2DR Double Ripstop.

SPRINT Airlock Valve

Single point rapid inflation of the kite. The large one-way Airlock valve quickly feeds air into all of the struts from a single location. Directly connects to the hose, no adapter needed. Once inflated you can lock off each strut independently.

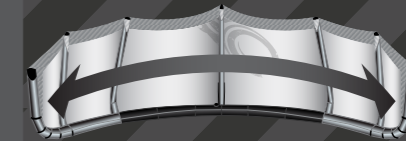

Modern Craftsmanship

Kites are carefully constructed by hand using the most cutting edge technologies and materials available today. The secret to our ultra durable construction lies in the experience gained building the world's best kites for over a decade.

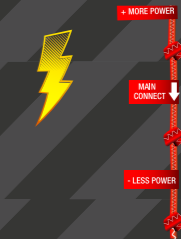

Dynamic Arc

A dynamic arc allows the kite to have two distinct arc shapes. Tighter arc in flight for faster turning. Opens wide on the water for faster relaunch.

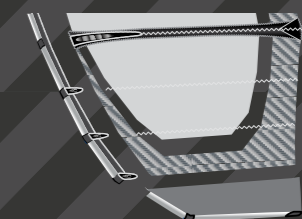

Power Control Pigtails

Quickly adjust the power level of the kite. Each rear line "pig tail" connector has three power positions which you can connect to. The middle position is the factory recommended position. Create more power by connecting the knot closest to the kite or less power by connecting to the knot closest to the rider.

All Cabrinha kites are designed and built on a Skeletal Frame foundation. Skeletal frame technology allows us to make a lighter more durable kite by strategically placing the reinforcement weight materials into a framework that surrounds the lighter weight canopy materials.

SWITCHBLADE

PERFORMANCE FREERIDE / CROSSOVER

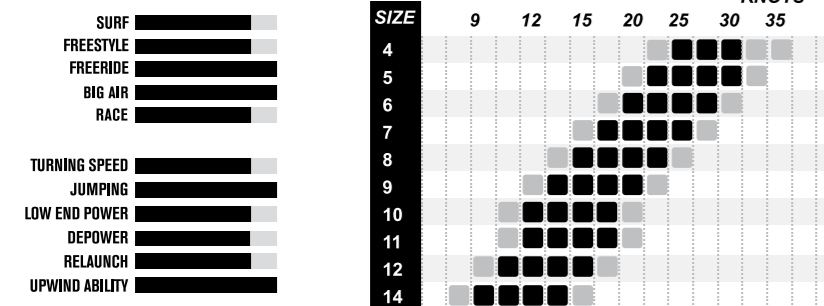

After ten years of refinement, the Switchblade kite from Cabrinha is held as the benchmark for which all crossover/freeride kites must aspire to. Its success lies in its uncommon blend of high performance and ease of use. The Switchblade will easily crossover from freeriding to freestyle to surf on any given day. The common element in each of these riding styles is precise handling; and this is where the Switchblade shines. The Switchblade provides maximum control with a light bar touch. The SB's high performance profiles deliver the power needed in light winds and the ability to dump the power in strong winds. This gives the SB the type of range needed to extend your sessions when the winds are up and down. The five strut design holds the canopy true to its shape regardless of the wind condition or angle of attack.

RIDER PROFILE: The discerning rider who will crossover from freeriding to freestyle to surf on any given day. High performance, versatility, and build quality are at the top of their list.

Why You'll Love It

- Most versatile performance kite
- 5 struts for standout stability and performance
- Enhanced profiles optimize the low end power
- Park and ride stability
- Direct steering
- Light bar pressure
- High hang time
- Easy relaunch
- 10 years of proven performance

KITE TECH

ULTIMATE CROSSOVER

RADAR

VERSATILE FREERIDE / CROSSOVER

The all new Radar kite intelligently combines raw performance with absolute simplicity. The Radar is a performance three strut kite with a park and ride power source. Any input given to the control system translates into an immediate response from the kite. The Radar is a full bodied, swept wing kite, meaning that you will not find an easier kite to relaunch when the kite hits the water. The generously curved leading edge makes the kite roll into the relaunch position with very little input from the rider. The Radar excels as a crossover kite with legit skills in freeriding, freestyle, and surfing.

RIDER PROFILE: Riders who want a simple to use, crossover performance kite with incredible relaunch capabilities..

Why You'll Love It

- Versatile crossover kite
- Scaleable performance
- Designed to maximize progression
- Three strut simplicity
- Swept leading edge for stability
- Best relaunching kite to date
- Park and ride stability

CONTRA

PERFORMANCE LIGHTWIND

The Contra performance light wind kite is specially designed to maximize the kite's power production in light winds. The Contra is designed to be a light wind extension to any kite in our range. The Contra delivers distinctly sharp and precise turning that makes generating power and speed a snap, while maintaining the agility of a smaller kite. It's this type of performance that has widened the scope of what is possible in light winds. Whether you are riding freestyle, wakestyle, surf or just burning around, the Contra has the muscle to get you up and riding when the winds are barely showing signs on the water.

RIDER PROFILE: For riders looking to extend their game into the light wind arena.

Why You'll Love It

Designed to be a lightwind extension to any kite in your quiver

Fun to fly in lightwind conditions

Enhanced profiles optimize the low end power

Direct feel with great response

Fast turning for lightwind performance

Optimized lightwind construction

Light bar pressure

Easy relaunch

KITE TECH

DRIFTER

SURFING

The Drifter surf kite is a kite with a purpose. This kite is dead set on being there for you when you need it and getting out of the way when you don't. You see, kite surfing is an act of taking power from the kite when you need it and dumping the power altogether when you don't. This high depower kite allows the rider to drop in, accelerate, then dump the power completely to snap or carve their turns. It delivers a perfect blend of the best elements of surfing and kitesurfing. The Drifter's special design allows it to drift downwind and stay aloft even when the lines are slackened. This phenomenon, first developed by Cabrinha is known as drift stability.

RIDER PROFILE: Specially designed to be the absolute best kite for surfing and surf freestyle.

Why You'll Love It

Podium proven surf performance

Slack line drift

Crazy fast turning speed

High depower

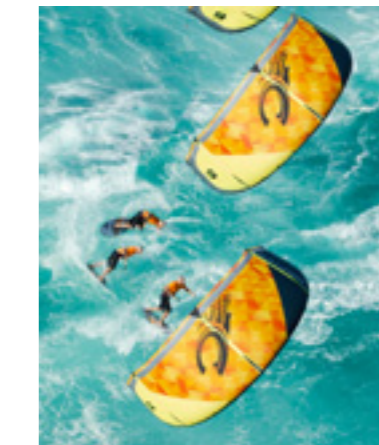

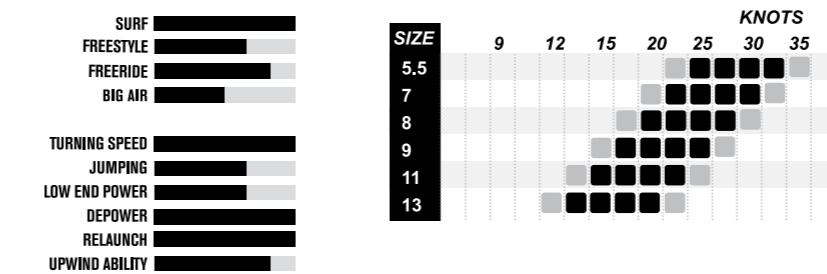

Moderate arc shape

Direct steering

Fast relaunch

Works in a wide range of conditions

KITE TECH

SLACKLINE DRIFT

While surfing its sometimes important to depower the kite to the point where you can surf on your own wave generated power without the pull of the kite. It's here that the Drifter is able to stay aloft and drift downwind with you. When the time calls for it, you can immediately power up the kite and make the next section.

CHAOS

FREESTYLE / WAKESTYLE

The Chaos freestyle kite is a highly technical freestyle / wakestyle kite capable of winning world class freestyle competitions. Everything put into this design is aimed at performing at the highest level of freestyle. This high aspect C shape is exactly what is needed for bursts of speed and the ability for the lines to slacken when unhooked. With the Chaos, you can throw a kite loop with the tightest arc possible, and the kite will hit the zenith with plenty of time to cushion your landing.

Rider Profile: The highest performing technical freestyle kite

Why You'll Love It

Podium proven competition performance

C-Shape arc for excellent freestyle and wakestyle performance

Engineered specifically for unhooked tricks

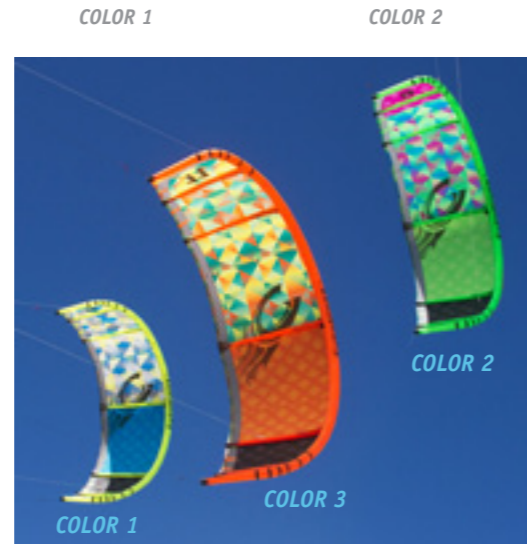

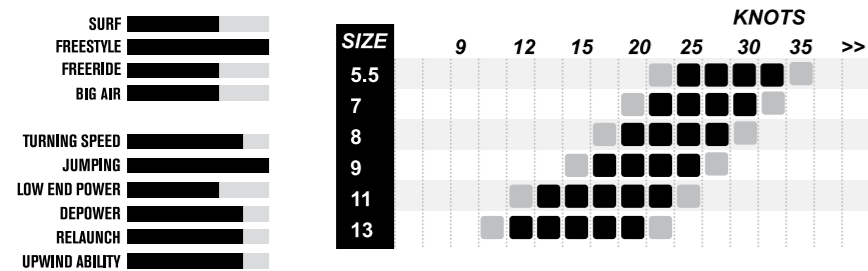

Carries power through turns for massive kiteloops

High aspect forward sitting kite that edges out well

Direct Steering

Tuned profiles to quickly generate board speed

KITE TECH

C-SHAPE

The C-shape allows the lines to pop and slack for handle pass tricks

VELOCITY

FREERIDE / RACE

The Velocity is our most efficient performance freeride/ race kite. The Velocity's ultra high performance comes from a combination of its high aspect outline, flatter arc, and high performance profiles. This delivers the most power per square meter of any kite in our range. It is perfect for boosting huge jumps or racing around a course.

Rider Profile: Designed for riders who want the ultimate power source for racing or high end freeriding.

Why You'll Love It

Podium proven race performance

True bow kite optimized for efficiency

High speed profiles

High aspect ratio for optimum upwind performance

Huge wind range

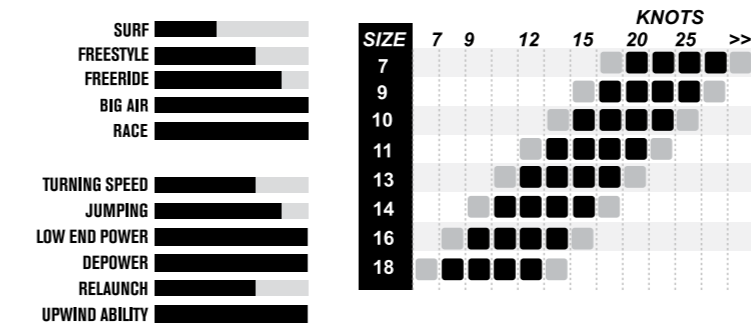

Thin bridling with no pulleys on the front lines

Light weight construction

Rides trim with relatively low rear line tension.

IKA registered.

CONTROL SYSTEM

OVERDRIVE 1X
CONTROL & SECURITY SYSTEM WITH QUICKLOOP

OVERDRIVE 1X

CONTROL & SECURITY SYSTEM WITH QUICKLOOP

49-57CM BAR

The 2015 Overdrive 1X QuickLoop™ control system is a fully adjustable control bar featuring our all new Quick Loop™ opening harness loop. Quick Loop™ is an opening harness loop connection designed to work specifically with our 1X single line flagging security system. Quick Loop's™ defining feature is its ridiculously simple operation of our 1X security system. Upon activation of 1X's single line flagging system the power of a kite is immediately killed and it will rest motionless on the water or land. The incredibly easy reconnection of the QuickLoop™ harness loop is now the new benchmark in the industry for simplicity. The all new Overdrive 1X security system now has a cleaner method to manage the 1X security line. We have removed the external 8meters of security line to create a simplified lower V connection. The 1X line stopper is integrated into the centerline adjustment strap.

Why You'll Love it

Incredibly simple activation and resetting of the QR

Overdrive™ bar ends adjust a full 8cm in length

Recoil Trim Adjustment

Soft EVA ends float entire bar

Low V

Internalized Lines

Depower on Demand

Spinning Leash

SIZE: STANDARD
ADJUSTS (49-57cm)

SIZE: XL ADJUSTS (57-65cm /24M Lines)

NEW 2015

QUICKLINK RACE

55CM BAR W/ 24M LINES

65CM BAR W/ 27M LINES (+3M EXTENSIONS)

Available in 2 sizes. Packed full of features designed specifically for racers and use with the Velocity kite.

Why You'll Love it

Fully spinning SLF safety system

Independent swiveling harness loop and leash attachment

4:1 Clam Cleat trim system with 30cm of adjustment

High quality 6mm yachting trim line, 30cm of CAS trim

Stainless steel trim fittings, no moving parts, low friction, durable

Reduced diameter control lines

Durable control line lower sections for reduced line wear

CODE

KS4CSVLQL

QUICKLOOP

NEW 2015

QUICK & EASY RESET

"FASTEST RELOAD ON THE MARKET!"

QuickLoop's™ defining feature is its ridiculously simple operation of our 1X security system. Upon activation of 1X's single line flagging system the kite's power is immediately killed and it will rest motionless on the water or land. The incredibly easy reconnection of the QuickLoop™ harness loop is now the new benchmark in the industry for simplicity.

To reconnect, simply push the open end of the loop into place and the latch will automatically engage the loop.

Dropping the QR body back down secures the loop back into place.

OVERDRIVE 1X
CONTROL & SECURITY SYSTEM WITH QUICKLOOP

QUICKLOOP

NEW 2015

QUICKLOOP TECH

OPENING LOOP QR

The main QR is a push away release with a catch that holds the QR in the released position until you are ready to reconnect. The main QR meets the AFNOR standards for release loads.

Landing line exits bottom center of system
Ensures no tangled leash after rotations. Swivel on landing line also avoids twists.

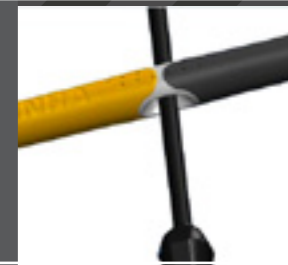

Mainline & Safety Line Internalized
Extremely low wear on lines that go through the bar. Landing line has a seamless channel for safe release and reload activation.

Manual Swivel
Ultimate control allowing you to always unwind front line twists

Spinning handle index's into bar centerpiece
Allows unhooked riders easy reattachment without taking hands off the bar.

Total Safety
QR release functions even when bar is sheeted in

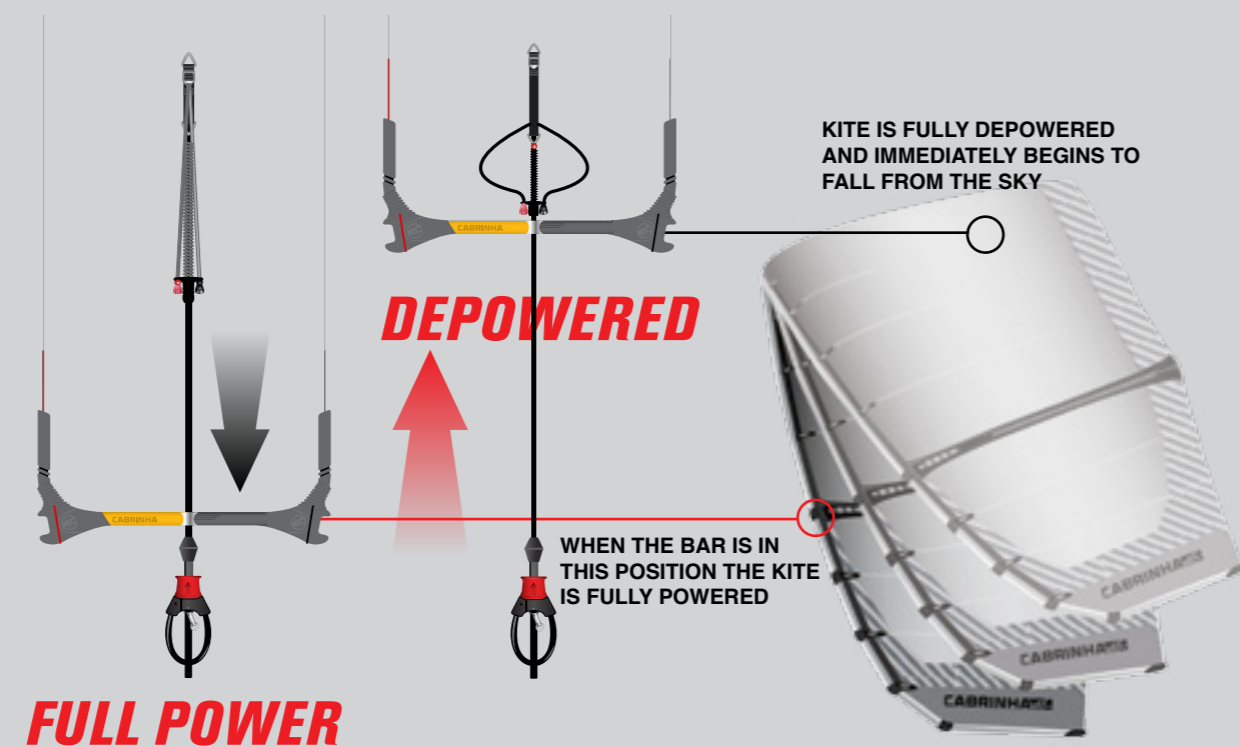

DEPOWER ON DEMAND

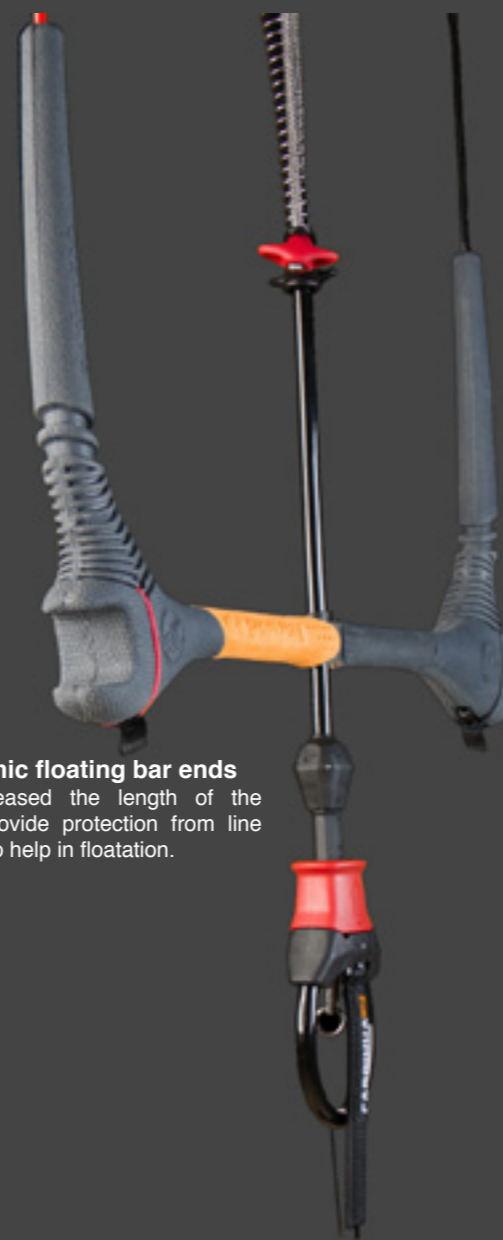

INDUSTRY LEADING DEPOWER

DEPOWER ON DEMAND PROVIDES MORE DEPOWER THAN ANY OTHER KITE ON THE MARKET

Cabrinha kites introduced Depower on Demand in 2005 along with our revolutionary Crossbow kite. Even today, every Cabrinha kite incorporates Depower on Demand as the default method to precisely control the power of a kite.

New ergonomic floating bar ends
We have increased the length of the bar ends to provide protection from line wrapping, and to help in floatation.

OVERDRIVE 1X

BAR TECH

Overdrive

The bar ends can change the length of your bar from its standard mode of 49cm, to the Overdrive mode of 57 cm in seconds. The Overdrive mode will increase the turning speed and performance of any kite large or small.

1X Security System

The 1X is not a depower system, it is a full blown shut down system. The 1X relies on only one line to immediately shut down the power of the kite whether it be on land or water in all wind conditions.

Recoil

Recoil keeps your trim adjusters in the same position every time. Even after you've depowered your kite, Recoil will return the trim adjusters to the exact same position for easy operation. The spring has been extended and is now closer to the rider on all bars.

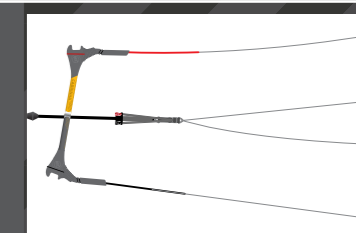

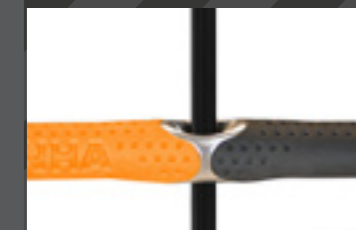

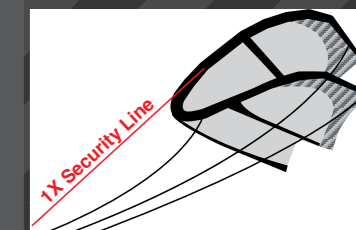

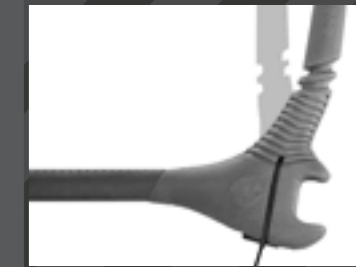

Internalized Lines

The protective PU tube allows us to run the depower mainline and the 1X landing line through the center of the bar without the risk of abrasion or tangling.

Low V

We have lowered the front line connection to the CAS in order to provide a more direct and immediate response from your bar input.

EVAN NETSCH / RADAR / TRONIC

BOARDS

ALBERTO RONDINA / XCALIBER SIGNATURE MODEL / H3

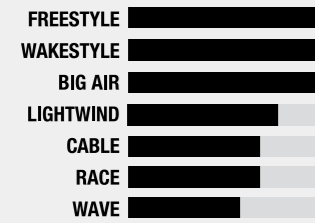

BOARD OVERVIEW

XCALIBER SIGNATURE MODEL

*ALBERTO RONDINA SIGNATURE MODEL
COMPETITION FREESTYLE*

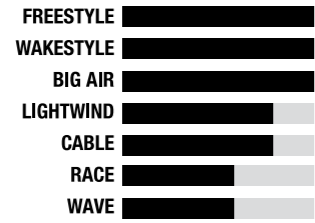

A premium competition freestyle board designed for the high end competitor.

ACE NEW 2015

FREESTYLE / FREERIDE

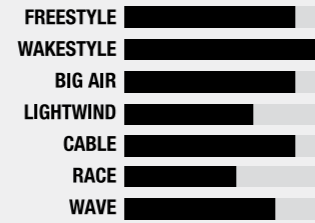

Riders who ride in any type of wind and water condition and experiment with alternate riding categories. Best for: Freestyle

CUSTOM

WAKESTYLE / FREESTYLE

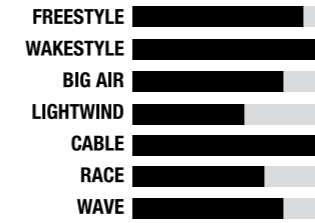

For the riders looking for the ultimate wakestyle ride that also excels in choppy conditions.

CBL

WAKESTYLE / CABLE

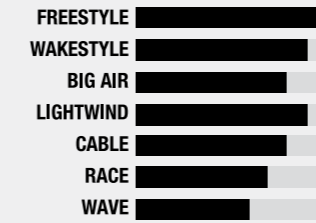

For riders who are dedicated Wakestyle, Cable park riding or both

XO SIGNATURE MODEL

*SUSI MAI SIGNATURE MODEL
WOMENS FREESTYLE / FREERIDE*

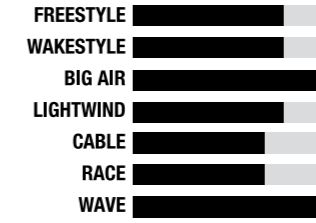

For women who want to progress their freestyle and freeriding

TRONIC

FREESTYLE / FREERIDE / BIG AIR

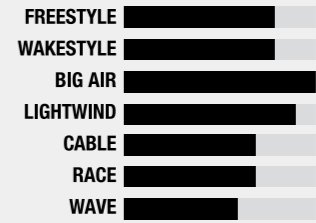

The Tronic is for riders who like to get huge air and carve turns in the surf.

SPECTRUM

FREERIDE

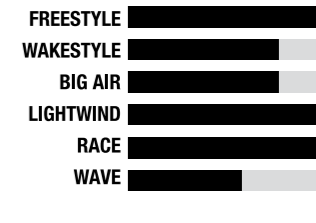

For the rider who wants a versatile performance twin tip.

STYLUS

LIGHTWIND / FREERIDE

The Stylus is specially designed for the rider who wants to ride a twin tip in the lightest wind possible.

BOARD TECH

Paulownia wood is vertically laminated to optimize strength, reduce weight and allow the board to flex more naturally and freely. Found in all 2015 models.

6

Carbon Fiber is a light weight and durable laminate that stiffens the flex pattern for increase response and explosive pop.

A single pour liquid urethane elastomer around the entire board is the ultimate impact resistance material while helping with rebound and vibration reduction.

Compression formed for enhanced slide and durability on obstacles. Found exclusively on the CBL.

M6 x 16mm Industry standard, super strong inserts. The same 16mm screws are used for fins, handle and foot straps.

Provides razor sharp responsiveness and stability for landings. designed to get you up and riding quickly and upwind fast. Found on the **Xcaliber Signature, Ace, XO, Spectrum**

The highest rocker line in our range for the ultimate performance. Found on the **CBL**.

Helps initiate G-force turns when banking off waves or redirecting in the flats and smooths the ride in choppy conditions. Found on the **Custom and Tronic**.

Gets you up on a plane with the least amount of power possible. Found on the **Stylus**.

**SINGLE
CONCAVE**

**DOUBLE
CONCAVE**

**QUAD
CONCAVE**

PARABOLIC RAILS

The Parabolic Rail provides a stiffer center section while delivering a more responsive tip and tail flex. Found on the Ace, Custom and Tronic

NEW BOARD TECH

Our unique Hex Flow fins feature a hexagon dimpled pattern over the surface of the fin. The hex pattern helps to create a boundary layer which assists in the laminar flow over the fin.

**VOLCANIC
BASALT**

Basalt is a natural volcanic fiber which offers vibration resistance and durability while maintaining a high strength to weight ratio. Naturally produced absent of toxic additives. The combination of wood core, with basalt laminate provides a flex characteristic which is unique to Cabrinha.

NEW 2015

XCALIBER

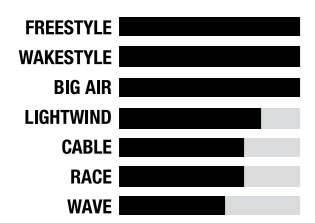

ALBERTO RONDINA SIGNATURE MODEL

FREESTYLE
132/40 135/41 138/42 141/43

The XCaliber is our competition freestyle pro model. Designed together with PKRA star, Alby Rondina, the XCaliber is designed to provide quick bursts of speed, incredible pop, and the upwind ability to keep your performance right in the box. The pop comes from our wood core and full carbon laminate. The extensive use of carbon allows this board to be our lightest, most technical twin tip.

- Why You'll Love It**
- Designed with PKRA star Alby Rondina
 - High reflex double bias carbon construction
 - Explosive pop
 - Excellent upwind drive
 - Stable high speed landings
 - 40mm GFN Hex flow fins

Rider Profile
A premium competition freestyle board designed for the high end competitor.

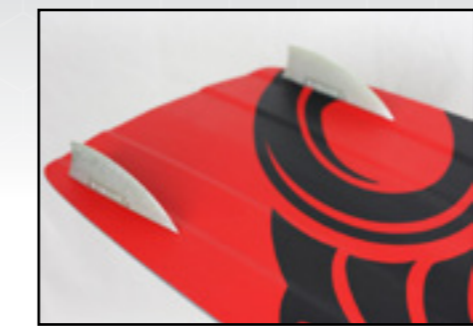

6 CARBON FIBER

FULL CARBON FIBER LAYUP

DOUBLE CONCAVE BOTTOM SHAPE

QUAD CONCAVE BOTTOM SHAPE

PARABOLIC RAIL

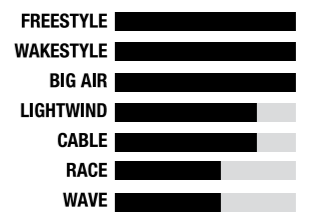

ACE

FREESTYLE / FREERIDE
133/39 135/40 137/41 139/42

The Ace twin tip takes the freestyle game out of the confines of the box. This go-to board performs in a huge range of freestyle conditions. It's forgiving in choppy water offering a smooth ride while retaining a high level of freestyle performance. The Ace is perfect for ocean or lake freestyle riding, thanks to its quad concave to quad V bottom shape. It is fast, smooth, and responsive.

- Why You'll Love It**
- Light weight basalt fiber construction
 - Parabolic rails™
 - Flex patterns tuned for a smooth ride
 - Explosive pop
 - Early planing lift
 - Maximum upwind drive
 - 40mm GFN hex flow fins

Rider Profile:
For freestyle riders who ride in any type of wind and water condition and experiment with alternate riding categories.

CUSTOM

FREESTYLE / WAKESTYLE

133/40 136/41 139/42 142/43

If your brand of riding leans toward throwing wakestyle tricks on the flats, the Custom would do you right. The Custom is a refined ride from many years of development in the wakestyle arena. The result is a board with pure wakestyle performance and surprisingly great upwind ability. All together this produces an incredibly smooth ride even in tight chop. The Custom is built with our winning combo of a Parabolic Rail™ and basalt laminate construction. The Parabolic Rail™ provides a stiffer center section while delivering a more responsive tip and tail flex and keeping the board weight to a minimum.

Why You'll Love It

Turns choppy water into your personal skate park

Excellent power control

Easy landings

Huge pop

Works well with straps or boots

Moderate rocker line

Firm flex

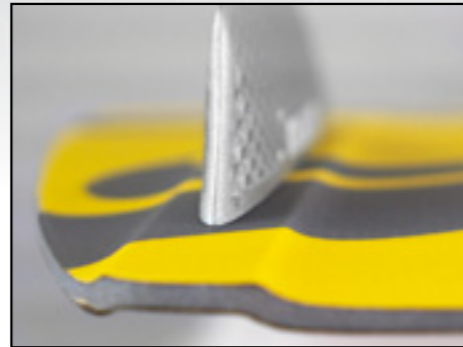

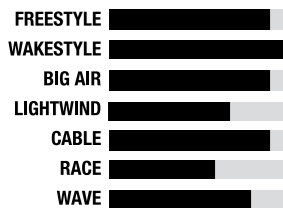

Outline hipped/ pulled in curve for power control

Double concave with center V and raised fin panels

4x 30mm Hex flow GFN Fins

Rider Profile:

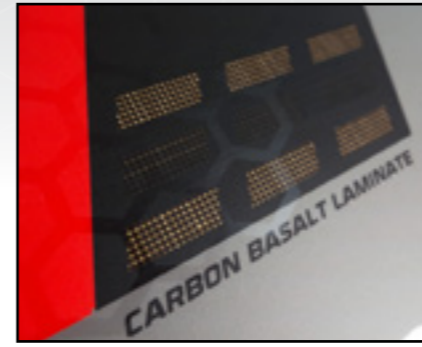

For the riders looking for the ultimate wakestyle ride that also excels in choppy conditions.

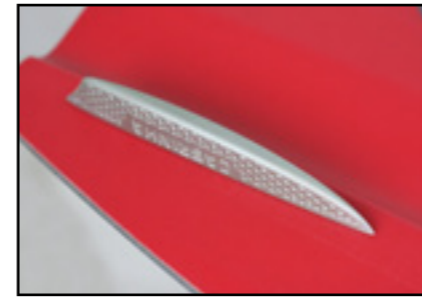

RAIL CHANNEL

PARABOLIC RAIL

BASALT & UNIDIRECTIONAL CARBON

OBSTACLE FRIENDLY FLAT FINS

CBL

WAKESTYLE / CABLE

133/40 136/41 140/42.5 144/43

In the increasing cross pollination of the Kite and Cable world the CBL stands out as the go-to model for both. The CBL can be ridden at the park or under a kite with identical results. The CBL features a deep double concave with a flat center and rail channels. The flat center combined with the P-Tex base is perfect when hitting any type of water feature. The rail channels provide the bite and the flat top 20mm GFN hex flow fins keep things grippy when needed and don't need to be removed at the park for added convenience.

Why You'll Love It

Wakestyle / Cable crossover

Smooth and durable P-Tex base

Smooth ride

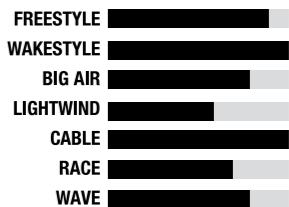

Obstacle friendly

Excellent grip

Slider compatible 20mm GFN hex flow fins

Rider Profile:

For riders who are dedicated to wakestyle, cable park riding or both

XO

SUSI MAI SIGNATURE MODEL

WOMEN'S FREESTYLE / FREERIDE

127/38 130/39 133/40 136/41

The XO Susi Mai signature model is inspired by the one and only Susi Mai. As a leader in performance riding and a role model for many, it was an easy task to create a board suited to her needs and the needs of the growing population of women in kiteboarding. Our approach to developing the XO was to start from scratch and engineer this board from the ground up. The result is a performance freestyle model with a soft, responsive flex. Details like appropriate sizes and widths, narrower stance options, and lighter weights all make this board the ideal choice for women of all levels.

Why You'll Love It

Light weight basalt laminate construction

Women specific flex pattern

Smooth ride in a variety of conditions

Early planing

Great pop

Easy landings

Comfortable stance options

GFN 40mm hex flow fins

Complete with H1 Siren bindings

Rider Profile

For women who want to progress their freestyle and freeriding

ROUNDED RAIL EDGES

TRONIC

FREESTYLE / FREERIDE / BIG AIR / WAVE

135/41 140/42 145/43

The Tronic is back this season as our freeride/freestyle twin that loves to get huge air. This year it gets an upgrade in design and construction, implementing our Parabolic Rail™ shape and a basalt laminate construction. With a softer curved tip and tail and a rounded and tucked rail, the Tronic tames choppy water and can redirect itself on a dime. The bottom contour is a quad concave to deep V to cut through any chop. The Parabolic Rail provides a stiffer center section while delivering a more responsive tip and tail flex.

Why You'll Love It

Light weight basalt fiber construction

Rounded tucked rail shape

Parabolic Rails™

Chop killer

Smooth ride in a variety of conditions

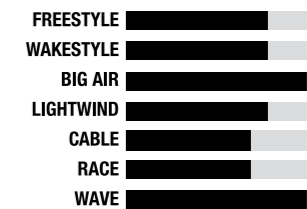

Powerful carves

Max edge control for boosting

50mm GFN hex flow fins

Rider Profile:

The Tronic is for riders who like to get huge air and carve turns in the surf.

SPECTRUM

FREERIDE

135/41 140/42 145/43

The Spectrum is a freestyle freeride model which means that it has a wide range of performance in a wide range of conditions. We use Paulownia wood core for strength and rebound and durable ultra bond PU rails. The Spectrum is a progression model which means that it has the ability to keep up with your riding level as you progress.

Why You'll Love It

Shaped for a solid ride in variable conditions

Design that will keep up with your riding level

Great upwind tracking

Easy landing

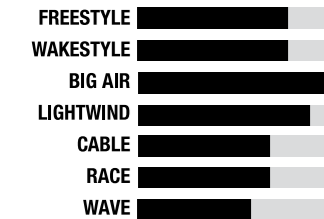

Durable textured top and bottom sheet

High visibility 45mm GFN fins

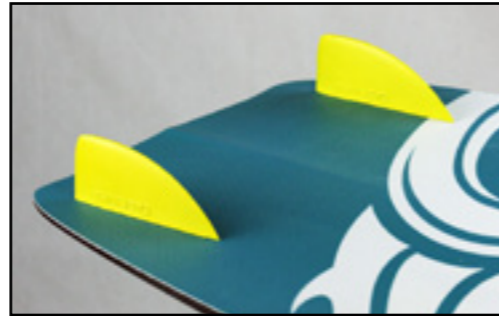

Complete with Hydra foot straps

Rider Profile:

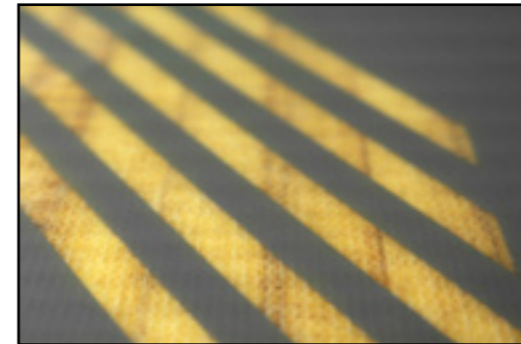

For the rider who wants a versatile performance twin tip.

EMBOSSSED TOPSHEET MATERIAL

HIGHLY VISIBLE FINS

WOOD CORE

STYLUS

LIGHTWIND FREERIDE / RACING

145/45 155/47 165/48

The Stylus is made to perform in the fickle conditions known as threshold winds. Threshold winds are generally thermal breezes with wind speeds just strong enough to fly a kite. The flat rocker line and extra wide outline make the most of these less than ideal wind conditions. In many cases, the Stylus twin tip will be the difference between sitting on the beach or getting a full kiteboarding session.

Why You'll Love It

Excellent performance in light wind

Extra wide outline for early planing

Wide range of use

Excellent upwind ability

30mm GFN Hex flow fin

Rider Profile:

The Stylus is specially designed for the rider who wants to ride a twin tip in the lightest wind possible.

JAMES BOULDING / CBL / H3

BINDINGS

LIAM WHALEY / ACE / H1

H1 HYDRA SERIES

STANDARD 9-14 US / 41-49 EUROPE
SMALL < 9 US / < 41 EUROPE

The H1 is a one strap asymmetrical body shape which provides a positive fit for the trader looking for board control with ease of use. The H1 is supportive yet lightweight and flexible. The H1 can be used for all types of twin tip riding from freestyle to freeriding. The H1 attaches to the board with minimal effort and allows for multiple stance options with duck and heel toe offset option. It sits on a super cushy footpad with arch support, toe grips, and generous heel coverage.

Why You'll Love It

Single adjusting velcro strap

New pad shape for a smooth comfortable ride while providing lots of grip

Triple position duck adjustment for personalized stance

Available in both small and standard sizes

Industry standard 6" Mounting Pattern

H1 FOOT STRAPS

STANDARD / SMALL

KB4HIFSFL / KB4HIFSFS

H2 HYDRA SERIES

STANDARD 9-14 US / 41-49 EUROPE
SMALL < 9 US / < 41 EUROPE

The H2 steps up the connection equation with a two strap, wide body backless binding. The H2's wider base and fuller coverage cradles the foot for more control and precision to create as much edge pressure as you need when busting huge freestyle tricks. The H2's tunable, ultra soft footbed create a perfect landing pad to keep your heels intact when dropping from the sky.

WHY YOU'LL LOVE IT:

New Floating tongue to accommodate a larger range of sizes.

Two quick adjusting velcro straps provide full coverage for a locked in connection with positive edge engagement.

Triple density pad designed for a smooth comfortable ride, while providing grip, and impact resistance.

Customizable heel pad inserts to tune your ride to hard and responsive, or soft and comfortable.

Triple position duck adjustments for a personalized stance.

Industry standard 6" mounting pattern.

M6x16 stainless steel mounting hardware included

Recreational Racing: Best

Surfboards Designed by Pete Cabrinha

This season we offer an all new range of surfboards to cover a much wider range of conditions. The most important changes have been made in the areas of width, volume, and construction. Wider widths and higher volumes have been implemented in the area most needed. Each board in the range is very different from the other which presents a completely different surfing or freestyle experience with each model.

General Rules

Length is the first place to start when choosing a board. A general rule for choosing a kite board is to ride a board which is approximately 2-3 inches smaller than your height.

Width of a board helps determine the volume as well as how much curve the board's outline will have. Wider boards generally have more curve (as well as more volume). Wider boards are lively under your feet, especially in lighter winds or smaller waves.

Volume is an important factor when choosing a board. Volume is made up of a combination of length, width, and the board's thickness. Volume is an important element, especially in lighter winds and smaller waves. However, when the wind is strong and the waves are bigger, too much volume will work against you.

Basalt

Basalt is a natural volcanic fiber which offers vibration resistance and durability while maintaining a high strength to weight ratio. Naturally produced absent of toxic additives. The combination of wood core, with basalt laminate provides a flex characteristic which is unique to Cabrinha.

Bamboo + Cork Construction

All 2015 surfboards are constructed with our ultra durable Basalt + Cork sandwich layup. The basalt sandwich construction features a super light (200gsm?) EPS core and basalt reinforcement layer on both the top and bottom of the board.

Pod Pads

Strategically placed hex shaped pods of EVA cover only the most crucial section of the board to allow easy repositioning of your feet. The hex pads are hollow to reduce weight.

This season we bring you an all new fin design in two options.

Hex Core RTM fins Premium

Made with a hex core and glass, this fin has a stiffer base and a moderately soft tip. The hex core fin provides excellent drive.

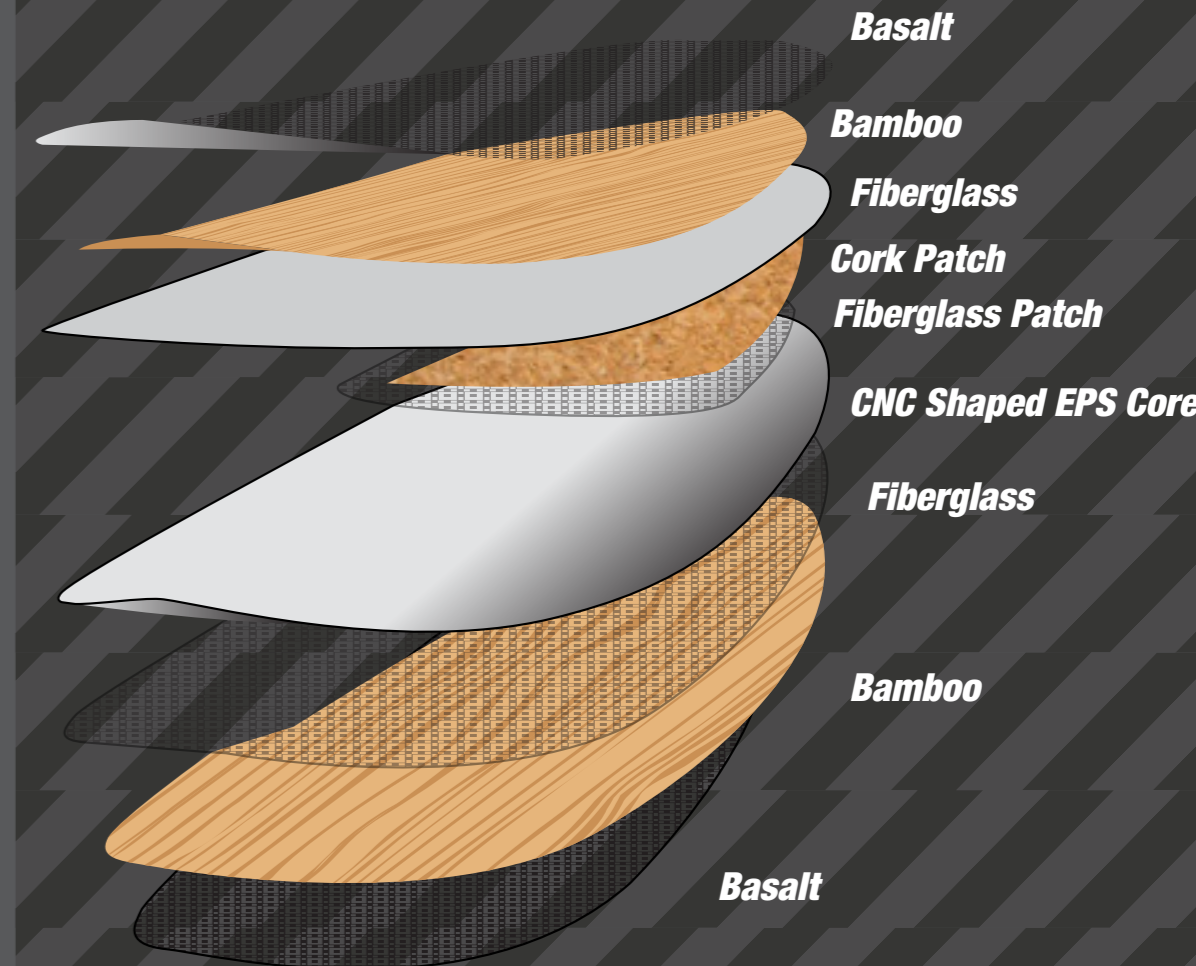

GFN FINS Standard

Our Glass filled nylon (GFN) fins offer a more affordable yet durable fin option. They have a slightly softer flex throughout the entire fin which translates into a dampened ride, especially in choppy waters.

SURFBOARD TECH

Construction

All 2015 surfboards are constructed with our new ultra durable eco-cork bamboo layup. The bamboo sandwich construction features a super light (25kg per cubic meter) EPS core and bamboo and basalt reinforcement layer on both the top and bottom of the board.

PHENOM

KEAHI DE ABOITIZ
SIGNATURE MODEL

The Phenom takes a step towards the performance end of the surf chain while keeping its easy to ride characteristics. The Phenom is our widest board with the highest volume. The combination of width and volume makes this board extremely versatile in the surf as well as the flat water freestyle arena. The Phenom is developed with our two time KSP World Champion, Keahi De Aboitiz. Its 5 fin box configuration allows the rider to choose just about any fin set-up they like. It ships as a thruster, but can easily be converted to a Quad Fin.

Rider Profile: Ideal for riders who are looking for a high performance surfboard with volume and trick riding capability.

Why You'll Love It

Works well in any wave size

Customizable 5 fin box

Perfect amount of volume and width for light wind

More surface area for freestyle tricks

Custom cut hex pod pads

Tech

LENGTH	WIDTH	THICK	LITERS	COMPLETE
5'7"	18 1/2"	2"	21.76	KB4CSQUAD
5'10"	18 13/16"	2"	23.25	
6'2"	18 13/16"	2"	24.58	

NEW 2015

PROTO

REO STEVENS
SIGNATURE MODEL

The Proto Reo Stevens pro model is our advanced surfboard model. The shape lends itself to stronger winds and side shore surf conditions. The Proto is capable of surfing larger waves than the Phenom or Secret Weapon. This 3 fin model is ideal for down the line, side shore surfing. Its narrower outline and straighter rail shape is perfect for pushing turns at higher speeds. Yet, the generous use of rocker makes the board loose and snappy off the top.

Rider Profile: excels in side shore, down the line surf.

Why You'll Love It

Ideal for down the line kitesurfing in chest high to double overhead waves

+ Smooth and drivey bottom turns with just the right amount of release for a variety of top turns

+ Single to double concave bottom

+ Wider nose offers lift under your front foot for freestyle tricks

+ Thruster fin set up

+ Custom cut hex pod pads

6'2"	18 13/16"	2"	24.58	

NEW 2015

SECRET WEAPON

The secret weapon is a modern spin on a retro-surf design. The rounded nose and wide tail make this board extremely friendly to ride in real world conditions. It is fast and lively on waves of any size. The aggressive swallow tail and quad fin configuration gives this board its edge and attitude. The Secret Weapon is excellent at making the most out of sub-par wind and surf conditions. Even when the surf is flat, the Secret Weapon becomes the ideal board to throw down your freestyle game.

Rider Profile: Ideal for riders who surf in various conditions and also need a board for flat water freestyle tricks.

Why You'll Love It

- + Excellent surf / freestyle design
- + Single to double concave bottom
- + Wide bottom surface area for early planing and lively feel in surf
- + Quad fin drive
- + Custom cut hex pod pads

NEW 2015

ALIAS

LIGHTWIND FREERIDE
174 / 59

The Alias is a super efficient light wind board with no limit to its performance or usage. The Alias, when combined with our Contra light wind kite, can have you flying across the water in well under 10 knots. The hybrid design is a combination of a race board and freeride directional; you get the best of both worlds in one board. The Alias, with its three fins will get you upwind in seconds. Once pointed off the wind, the Alias becomes one of the best downwind models for speed and maneuverability. It comes with a swept bi-elliptical tri-fin set.

Why You'll Love It

- Increases the bottom end wind range of any kite quiver
- Excellent light wind performance
- Excellent for distance and downwinders
- Internal grab handle
- Ultralight Adjustable Footstraps
- 3 GFN fins

Rider Profile

A high volume directional board for light wind cruising, downwinders, or all round freeriding.

TWINTIP FINS - CNC PERFORMANCE G10 FINS

Cabrinha twintip fins are precision foiled for high speed and control. Our thin foils have been proven to give you the right amount of bite without excess drag. Fins are constructed from G10 for added durability and a solid grip on the mounting screw threads. Fits all Cabrinha boards. All sizes of fins come in a pack of 4 fins with 8 screws and 4 washers.

SIZE		CODE

SURF / RACE / ALIAS FINS

Cabrinha has developed a set of fins specially for Cabrinha Surfboards, Raceboards and Alias boards. The materials, foils and templates have all been designed around the unique physics and demands of kitesurfing. This year's surf fins are stepping up the tech, our Lantor Hex Core has improved performance and reduced weight. A new flexible tip profile for added feel drive. RTM glass fins, and the ever reliable Future fin system, deliver everything you'll ever need - direct to your board.

DESCRIPTION		CODE

HYDRA STRAPS

The Hydra is a one strap asymmetrical body shape which can quickly adjust to the perfect size with external adjustments. The Hydra is supportive yet lightweight and flexible. The light weight, 3D molded EVA pads are designed with performance and ease of use in mind and cradle your feet to reduce fatigue.

DESCRIPTION		CODE
HYDRA FOOT PAD	x2pcs	KA4HDFPAD
HYDRA MOUNTING TABS	x4pcs, x4 screws	KA4HDMTTB

For Straps see H1

H1 STRAPS

The H1 is a one strap asymmetrical body shape which provides a positive fit for the rider looking for board control with ease of use. The H1 is supportive yet lightweight and flexible. The H1 can be used for all types of twin tip riding from freestyle to freeriding. The H1 attaches to the board with minimal effort and allows for multiple stance options with duck and heel toe offset options. It sits on a super cushy footpad with arch support, toe grips, and generous heel coverage.

DESCRIPTION		CODE

KA4HICFAP

KA4HIMTAB

H2 STRAPS

The H2 steps up the connection equation with a two strap, wide body backless binding. The H2's wider base and fuller coverage cradles the foot for more control and precision to create as much edge pressure as you need when busting huge freestyle tricks. The H2's tunable ultra cush footbed creates a perfect landing pad to keep your heels intact when dropping from the sky.

DESCRIPTION		CODE
H2 UPPER STANDARD	x2pcs, x8pcs screws	KA4H2UPFL
H2 UPPER SMALL	x2pcs, x8pcs screws	KA4H2UPFS
H2 CHASSIS STANDARD WITH PADS	x2pcs, x4pcs EVA inserts, x4pcs 6x16mm screws	KA4H2CHDL
H2 CHASSIS SMALL WITH PADS	x2pcs, x4pcs EVA inserts, x4pcs 6x16mm screws	KA4H2CHDS

ULTRALIGHT STRAPS (for SURF and RACE)

If you are looking for the most comfortable footstrap on the planet look no further than the Cabrinha ultralight strap. The Cabrinha ultralight strap has mirrored the evolution of the surfing and racing trend to meet the needs for the hard core rider. The symmetrical outline is perfect for riding goofy-footed or regular on the same board. Developed on the North Shore of Maui, this strap is also perfect for tow-surfing.

DESCRIPTION		CODE
ULTRALIGHT STRAP	x2pcs straps, x6pcs strap screws, x2pcs metal washers, x4pcs anti-twists, x4pcs plastic washers (suitable for surfboards & raceboards)	KA4ULHTSP

H1S STRAPS (for RACE and ALIAS)

Sharing the same DNA as the H1 the H1S is a supportive, lightweight and flexible symmetrical shaped adjustable strap. The H1S can be used for all types of directional riding from any freerace board to surfboards and raceboards.

DESCRIPTION		CODE
H1S STRAP	x2pcs, x4pcs screws, x4pcs washers, x4pcs anti-twists (suitable for race & Alias board)	KA4ALADFS
