The 2016 Blade range has been refined and improved to offer maximum efficiency, durability at the lightest possible weight.

## BLADE TECHNOLOGY

Flex and strength are tuned into each blade size and shape through the utilization of Biaxial and Uni-Directional cloths.

A blade with good flex allows one to paddle longer and harder without getting tired. Our composite blades have a new light weight PVC core developed from aerospace technology and a super strong ABS rail insert along the entire edge of the blade, even the most exposed upper part of the blade neck. All blades are produced with the exact resin ratio, reducing any excess weight without compromising the strength and flex of the blade.

### CARBON

**CARBON** blade technology offers a custom woven Biaxial 60/60 degree carbon cloth and a new stronger high density PVC Core that is both lighter and stronger. A shortened stringer is used on the Bolt to give more flex and recoil at the very tip of the blade. A glass 45-degree fabric is used to increase the durability and reduce the risk of buckling. The technology retains strength while possessing incredibly good flex characteristics.

The outline edge on all Carbon and Tiki Tech blade necks has been removed to offer a smooth round finish, saving weight and increasing the blade's efficiency and protecting the rail of the board.

Available in all Enduro and Bolt sizes in Blue and Red.

### TIKI TECH

Improved with the new lightweight and extra strong high density PVC Core, full ABS Rail, Hybrid Carbon lay up and special scratchproof surface finish.

A blade with forgiving flex characteristics, strength and light weight at exceptional value.

All size Tiki Tech blades sold separately in Red, Blue, Green, and Pink graphics with matching ABS Edge.

### TUFKIN

The Tufskin blades are strong and extremely durable. Featuring ABS foils based on the EnduroL and EnduroS blades. Their forgiving nature and high quality shape make them the best value offering in the sport.

The Tufskin blades are perfect for whitewater paddling and schools due to their extreme strength and high impact resistance.

## BLADE SHAPES

The angle of the paddle blade through the water and the blade's size dictate the power and efficiency of your stroke. Our blades are angled and foiled to minimize drag and maximize power transfer throughout the stroke. The tracking and catch of the blade is crucial in achieving maximum power.

### ENDURO

**ABS RAIL**

ABS rail from neck to the entire edge of the blade.

The Enduro is a well-balanced blade design with a medium dihedral providing great stability and good power. The relatively low aspect design makes it easy to lift the paddle out of the water with each stroke and it also is great to lean on while wave riding. A brilliant all-round blade design and a preferred choice for Team Riders; Titouan Puyo matched with an oval shaft for racing, and a favorite for Sean Poynter who uses a round shaft combination for the surf.

### BOLT

**ABS RAIL**

ABS rail from neck to the entire edge of the blade.

The Bolt is a natural evolution of the winning High Aspect shape. Its unique narrow and flat profile make the Bolt feels exceptionally direct with its 10° angle. The double concave on the power face creates an effortless and forgiving catch. The blade instinctively aligns itself in the water for maximum tracking, allowing one to transfer all their power in a forward motion. Its slender outline cuts through the water to offer the highest cadence stroke for sprinting, while the power transfer and response is direct. The Bolt is designed to push you to paddle faster with less effort and fatigue. A precise and effective paddle that is perfect for racing and used by advanced wave riders who likes to pivot turn with their paddles. The Bolt is Connor Baxter's (2014 World Race Champion) signature blade.

## HANDLE TECHNOLOGY

All handles have been reshaped to maximize comfort and grip. The Palm Grip of the handle has been reduced, creating more depth to clasp a tighter hold for increased control and alignment and to improve tracking. A small concave area is embedded to allow the middle finger to gain a tighter and balanced hold, designed to assist the power phase of the stroke. Available in Carbon, Lightweight plastic with texture or EVA.

### CARBON

NEW

### LIGHT WEIGHT

### LONG HANDLE

Paddles fitted with Oval, Round or Skinny Premium Carbon shafts will be paired with Starboard's new composite carbon handle. Super lightweight at just 30g / (1.1 oz) and strong due to the carbon layup: Twill carbon finish and matte texture for enhanced grip.

The lightweight, smooth, comfortable, super strong, molded handle at just 40g (1.4 oz), is lighter than many composite handles on the market. It can be paired with our Hybrid Carbon Shafts.

Starboard's one piece, lightweight solution for those wishing to lengthen their paddle. The handle features an extra-long shaft that allows for 30cm (12") of adjustment. The handle can be fixed in place using the hot glue system if adjustments are needed or by epoxy for a permanent fixed length.

## SHAFT TECHNOLOGIES AND SHAPES

### TWO TECHNOLOGIES

All shafts are produced using Pre-impregnated Technology, precisely controlling the resin to fabric ratio, resulting in 100% standardized weight and strength in every shaft. The resin is compressed into the fiber before the lamination process to ensure homogenous bonding properties. The result, the highest quality shafts with no compromises.

**FIXED LENGTH**  
Adult 165 cm 65 inches  
Kids 130 cm 51 inches

**FIXED LENGTH**  
Adult 165 cm 65 inches  
Kids 130 cm 51 inches

**CARBON** All Carbon shafts are 40 grams (15%) lighter than 2015, helping the rider paddle for longer with the least amount of energy consumed. Carbon shafts are built with a lightweight 100% Carbon Fiber Pre-impregnated construction.

**HYBRID CARBON** The New Hybrid Carbon shaft looks like carbon and is 27 grams (10%) lighter and stronger than last year glass using 80% Glass and 20% Carbon.

Paired with Starboards Enduro and Bolt Tiki Tech blades, the Hybrid Carbon provides an economical yet great combination for all paddlers.

## SHAFT SHAPES

We have 3 different shaft shapes available to offer maximum comfort and grip for every riding style.

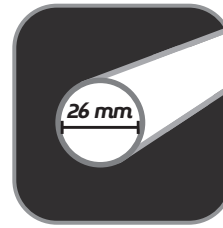

### OVAL

A precise and controlled grip, shaped to naturally fit in hand for the most direct tracking and alignment. Light in the hand it does not have a sharp angle as with many other oval shafts.

### ROUND

The Round shaft is the most versatile shaft, feeling light and lively, it is typically preferred for all-round paddling and waves: Sean Poynter and Zane Schweitzer's choice for waveriding.

### SKINNY

We Reduced the Diameter of the round Shaft [RDS] by 3mm for lighter riders that require a smaller grip. Suited for kids, and women, the Skinny is also a popular choice for racers who want a shaft that feels slight in hand, making it easier to adjust a grip and switch sides quickly with less area to hold.

The length of the shaft remains the same for adults (165cm) and for kids (130cm).

## SHAFT STIFFNESS

Each shaft is fine tuned to control the weight and flex needed for different riders styles and paddling conditions. Intensive testing with our team riders, in particular Connor Baxter, allowed us to tailor shafts to offer the optimum level of flex needed to maximize speed and power. The lower the number the stiffer the shaft, with 38 stiffest and 42 with more flex. It is important for riders to consider that the shorter they cut their shaft the stiffer it becomes.

### 35

The stiffest shaft for elite riders and paddlers that prefer a stiff shaft with minimal flex. The 35 has the closest flex to the 2015 shaft.

### 38

A stiff shaft with the quickest response when applying powerful strokes, as the power travels instantly through the shaft and isn't delayed by flex. Connor Baxter's preferred choice.

### 40

The 40, appeals to a wide range of paddlers who want a balance in performance. The 40 is supplied with all adjustable paddle combinations.

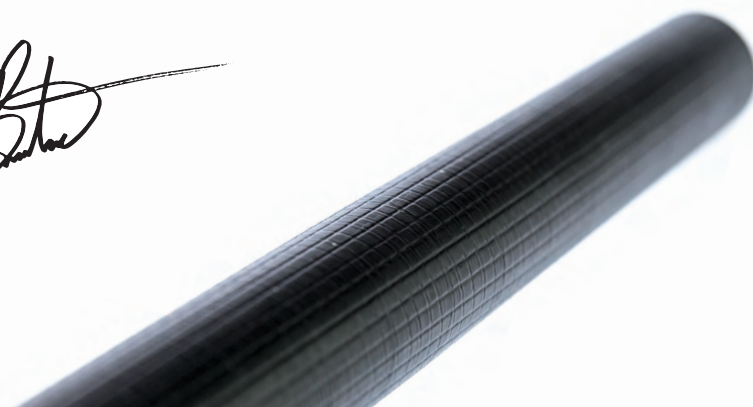

### 42

The 42 offers the most flex is particularly engineered to entry-level riders who require less exertion as well as paddlers who have been prone or suffered from injuries. All kids shaft in 42.

## SHAFT TEXTURE

### CHOKE STROKE

Connor Baxter's new signature Choke Stroke Texture enhances the grip for high cadence strokes and quicker transitions from side to side, without losing power. The middle of the shaft uses a Matt Tape finish for prime control when dry and wet, while the bottom of the shaft includes a Spiral Wrap. All graphics on the shaft are bonded in the fabric for maximum scratch resistance protection. All Fixed shafts in Carbon and Glass feature the new textured finish.

# SHAFT FIXED

# SHAFT ADJUSTABLE

All adjustable shafts are 40% lighter and have been carefully developed to increase usability, efficiency and performance. The new adjustable shafts feature an inner shaft with a register slot to control the position of the shaft at all times, while stopping the shaft from twisting ensuring alignment. This allows the paddler to quickly extend and reduce the shaft to the desired height in one motion without struggling to align the handle and blade. All adjustable shafts use 40 stiffness.

### 2 pc ADJUSTABLE SHAFT\*

Our 2 piece adjustable shafts attach with the compact Tiki Clamp and are great for travellers and paddlers wanting versatility.

\*Available with Bolt Carbon, Bolt Tikitech, Enduro Carbon, Enduro Tikitech and Tufskin

### 3 pc ADJUSTABLE SHAFT\*

Starboard 3 piece paddles connect using a secure spring pin system and come with an additional compression clamp to reduce any play; guaranteeing the same performance as a fixed shaft paddle.

The paddle, when fully detached, measures only 85cm and easily fits inside the Astro inflatable bag.

### CLAMP

The Tiki Clamp has been slightly enlarged, allowing for a quicker and easier release on the water. The bigger surface area increases the strength and provides greater leverage, requiring less pressure to open and close the clamp. At only 28g, the clamp remains lightweight, minimizing swing weight and energy consumption in every stroke.

# POLO

The SUP Polo Blade has been designed in collaboration with Wholly Paddle to offer optimum functional performance, combining a blade that perfectly clasps the SUP Polo ball, while still being able to paddle effectively at speed. The distinct large Concave shape and Steep Sidewalls in the face of the blade allow the paddler to scoop the ball out of the water at ease. This is helped with the unique Polo Pocket, measured exactly to hold the ball securely at all times, allowing the paddler to swing around when aiming without the ball falling out. The Throat of the blade is specifically angled so that the ball rolls into the Polo Pocket, maximizing the swing release.

SUP Polo Blades are available in either blue or red to have separate teams.

# ENDURO FLAT WATER / SURF

A well balanced blade design with a medium dihedral providing great stability and good power.

Available in five sizes tailored to different power needs, the Enduro is designed as a multipurpose paddle for waves, flat water and racing. The Enduro is our most popular blade range due to its versatility and light feel. Sean Poynter, Izzi Gomez and Zane Schweitzer's choice for wave riding.

Carbon enduro features blue graphics and a blue ABS edge while Tiki Tech blades come in blue, red, green, and pink graphic options with matching ABS edge.

## BOLT FLAT WATER / RACE

The Bolt is the natural evolution of the winning High Aspect shape.

With its unique narrow and flat profile, the Bolt feels exceptionally direct with its 10° angle. The double concave on the power face creates an effortless and forgiving catch, inspired from the complex concaves in our race boards that offer unmatched performance. The blade instinctively aligns itself in the water for maximum tracking, allowing one to transfer all their power in a forward motion. Its slender outline cuts through the water to offer the highest cadence stroke for sprinting, while the power transfer and response is direct. The Bolt is designed to push you to paddle faster with less effort and fatigue. A precise and effective paddle that is perfect for racing and used by advanced wave riders who likes to pivot turn with their paddles. The Bolt is Connor Baxter's the 2014 World Race Champions signature blade.

Carbon Bolt features red graphics and a red ABS edge while Tiki Tech blades come in blue, red, green, and pink graphic options with matching ABS edge.

# ENDURO TUFKIN FLAT WATER / SURF

The Tufskin paddle features a nicely-foiled strong ABS blade based on the Enduro L and Enduro S composite blades.

The Tufskin blade comes standard with the Hybrid Carbon shaft making it an exceptionally good value. A kids version with a smaller diameter shorter shaft, smaller handle and a smaller 475 cm<sup>2</sup> (74 in<sup>2</sup>) blade size is also available. The Enduro Tufskin is perfect for white water paddling due to its extreme strength and durability.

The Enduro Tufskin paddle is also available in 2 pc adjustable and 3 pc versions (85cm fully detached), best suited for schools and travelers.

# SHAPE OVERVIEW

## ALL ROUND

Provides enough glide for flat-water cruising, good stability for catching waves and exciting performance once up and riding.

- 12'0" X 36" ATLAS EXTRA
- 12'0" X 33" ATLAS
- 11'2" X 30" BLEND
- 10'5" X 30" DRIVE

## SURF

High performance, yet stable shapes for dedicated wave riding. Sizes 10'0" and above also for cruising.

- BIG BONE
  - 11'2" X 36" AVANTI
  - 10'0" X 34" WHOPPER
  - 9'5" X 33" WHOPPER NEW
  - 9'0" X 33" HERO
- WIDE POINT
  - 11'2" X 32" NEW WIDE POINT
  - 10'5" X 32" WIDE POINT
  - 9'5" X 32" WIDE POINT
  - 8'10" X 32" WIDE POINT
  - 8'8" X 32" AIR BORN WIDEPOINT
  - 8'2" X 32" WIDE POINT
- SURF 30"
  - 9'8" X 30" ELEMENT
  - 9'5" X 30" CONVERSE+
  - 9'0" X 30" CONVERSE
  - 8'5" X 30" POCKET ROCKET

## INNOVATION

Compact performance. Fast, stable, and reactive due to its short length with insane projection and tight turning from the inverted nut "rails".

- 8'6" X 31.5" NEW HYPER NUT
- 8'0" X 31.5" NEW HYPER NUT
- 7'4" X 30" NEW HYPER NUT
- 7'2" X 28" NEW HYPER NUT
- 7'8" X 30" NEW HYPER NUT
- 6'10" X 26.5" NEW HYPER NUT
- 6'9" X 23.5" NEW HYPER NUT
- 11'2" X 30" NUT
- 9'5" X 29" NUT
- 9'0" X 28.5" NUT

## SURF / ALL WATER

The All Star provides amazing glide while maintaining stability in all conditions and control to surf in breaking waves during beach racing.

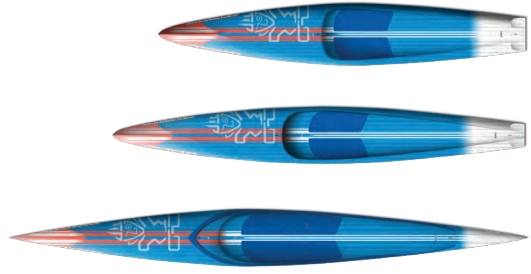

- 14'0" X 27" NEW ALL STAR
- 14'0" X 28" NEW ALL STAR
- 14'0" X 25" NEW ALL STAR

# ALL ROUND

**PROVIDES ENOUGH GLIDE FOR FLAT-WATER CRUISING, GOOD STABILITY FOR CATCHING WAVES AND EXCITING PERFORMANCE ONCE UP AND RIDING.**

- **Target Rider:** First time paddlers up to 130kg
- **Dimensions:** Boards length from 10'5" for fast glide and speed to cruise and cover distance. Width is 30" to 36" providing stability
- **Key Features:** Wide nose and tail for stability. Bungee tie downs on Atlas and Atlas Extra, ¾ Eva Deck pad. AST Electric with extra fin boxes for windsurfing.

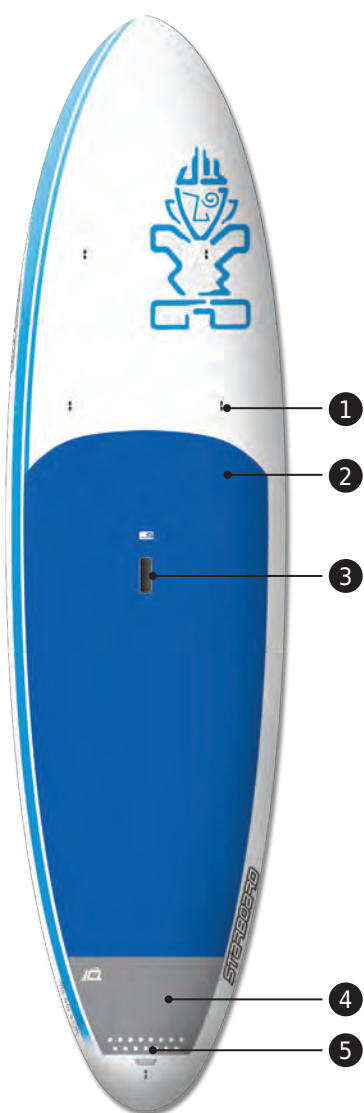

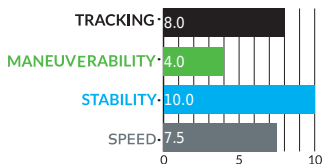

# 12'0" X 36" ATLAS EXTRA

*"An ultra-stable ride with good glide and fun downwind characteristics."*

The Atlas Extra is a wider and more stable version of the popular Atlas, suited for heavier riders and for those that want to paddle at ease without doubting their balance. The shape has a race inspired aft rocker for fast easy paddling and generous nose kick to deal with choppy water or downwinders. It's the simplest and most stable board to enjoy all aspects of entry level paddling.

The Atlas Extra as the name suggests is big enough to take more than one person or pack it with gear using the bungee deck inserts.

*"Mono-concave to flat V"*

**MAX RIDER WEIGHT**

130 kg

**DIMENSIONS**

Length:	Width:	Thickness:
12'0"	36"	4.6"

- 12'0"x33" Atlas
- 11'2" x 36" Avanti

\* Technology Featured: Starshot Blue

*\*Starshot and ASAP are provided with Black injection molded fins*

# 12'0" X 33"

## ATLAS

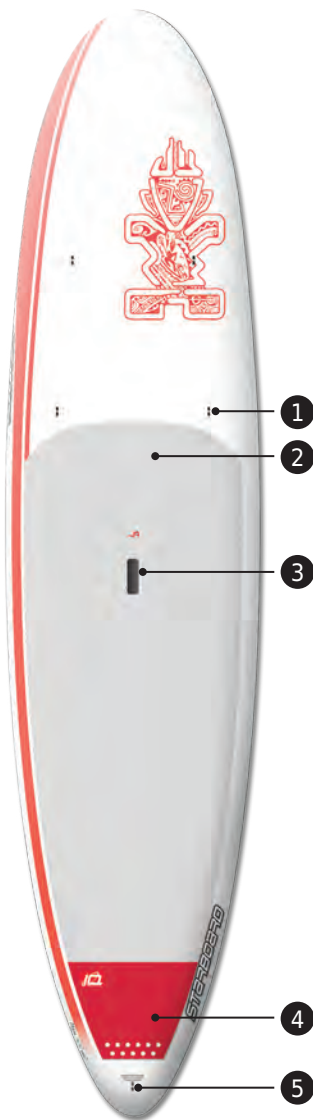

*"The entry level Board for all aspects of the sport providing a stable platform for the heavy rider or multiple riders."*

At 12ft, the length offers good glide for coastal cruising/exploring, and if you come across some waves on your adventures, the Atlas will help get you into them with ease and be surprisingly nimble for such a large board.

33" wide makes for great stability whilst relatively fine rails help for control and sensitivity. It's bottom shape promotes easy rail to rail drive speed and mid point turning, with smooth cutbacks when stepping back onto the tail.

*"Mono to double concave to V in the tail."*

\* Technology Featured: Starshot Red

### MAX RIDER WEIGHT

- 12'0"x33" Astro Atlas
- 11'2" x 30" Blend

\*Starshot and ASAP are provided with Black injection molded fins

# 11'2" X 30" BLEND

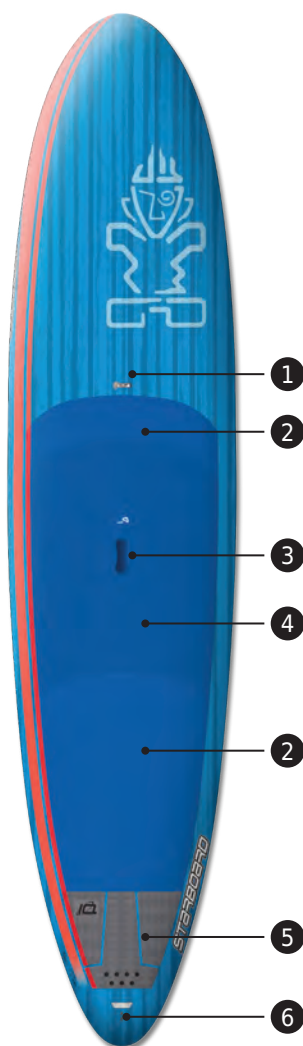

*"The ultimate blend for surfing and flat water cruising"*

The Blend has excellent credentials as the ultimate crossover board. It caters for flat-water oriented paddlers who also desire longboard style performance in the waves.

It's outstanding glide makes coastal cruising enjoyable, whilst getting you into waves easily. Once on the wave, it's heavy mid section V and concave generates speed and is reactive rail to rail from the middle of the board, with responsive cutbacks when stepping back.

*"Mono-concave to double to V in the tail."*

**MAX RIDER WEIGHT**

95 kg

\*Starshot and ASAP are provided with Black injection molded fins

# 10'5" X 30" DRIVE

*"Extremely versatile flat-water paddleboard and ideal entry into the waves"*

A much loved favorite for it's wide range of appeal. From flat-water fitness to exploration with it's good glide and fun in the surf, the Drive does it all.

Mono concave in the nose creates lift and directs water into the mid section double concave V, which accelerates the water producing speed and creating a rail to rail sensation standing in the middle of the board.

Tail V aids in turning off of the tail for exceptional maneuverability and smooth cutbacks.

*"Mono-concave to double to V"*

# SURF

## BIG BONE

EXTRA WIDE TO ACCOMMODATE HEAVIER RIDERS IN THE SURF AND BEGINNERS WANTING EXTRA STABILITY TO VENTURE INTO THE WAVES.

## WIDE POINT

ALL AT 32" WIDE, THE WIDE POINT RANGE COMBINES STABILITY WITH HIGH PERFORMANCE SURF SHAPES FOR MEDIUM TO HEAVIER RIDERS.

## SURF 30"

GOOD GLIDE FOR EASY ENTRY AND SPEED INTO WAVES, WHILE OFFERING A NARROWER WIDTH FOR GREATER MANEUVERABILITY FOR LIGHTER WEIGHT RIDERS.

• <b>Target Rider:</b>	Heavier riders up to 130kg	Riders up to 105kg	Riders up to 95kg
• <b>Dimensions:</b>	33" wide and above for maximum stability. 9'0" to 11'2" for maneuverability and stability.	All 32" wide for good stability. Length from 8'2" to 11'2"	All 30" wide for efficient paddling and greater maneuverability. All boards are under 10ft.
• <b>Key Features:</b>	Wide nose and tail for stability, ¾ Eva Deck pad. All AST Electric boards with extra fin boxes for windsurfing.	Thinner rails and more pointed outline for maximum speed and control. Sharp nose and tail for stability. ¾ Eva Deck pad for optimum grip	Wide nose and tail with thinner rails for stability and speed. ¾ Eva Deck pad

## FIONA WYLDE

# BOARD OVERVIEW: SURF

High performance, yet stable shapes for dedicated wave riding. Sizes 10'0" and above also for cruising.

## BIG BONE 33"-36"

Extra wide to accommodate heavier riders in the surf and beginners wanting extra stability to venture into the waves.

## WIDE POINT 32"

All at 32" wide, the Wide Point range combines stability with high performance surf shapes for medium to heavier riders.

## AVANTI

*"The family board for every "Body""*

The Avanti is the ultimate heavier person's board, providing the generous stability and float to have fun in the waves. The 36" width makes the Avanti one of the most stable boards in the range, yet its performance defies its dimensions, remaining nimble due to elements of its design.

Nose concave feeding into a heavy midsection double concave and V create lift for getting into the wave easily the ability to generate speed with rail to rail transition from the middle of the board.

Step back on the mono concave tail and water is accelerated down the middle for speed with curve on the rail for tighter turning

# 10'0" X 34" WHOPPER

*"The famous board that makes everything easy. Simply fun for the whole family."*

The legendary Whopper set the benchmark by being the first board to go wide at 34". At the time it was shocking, but now is considered the norm. The Whopper leads the way in easy, fun performance. A board that's incredibly stable yet defies its dimensions with effortless trim and dynamic turning abilities.

Using a forward V in the stance area, promoting rail-to-rail reactivity, running to a single concave that accelerates the water through the back of the board, to a V off the tail. Generous nose kick makes pearling close to impossible. The ultimate family all rounder.

# 9'5" X 33" WHOPPER

*"A "slighter" version of the legendary Whopper."*

The Whopper is a board for those that appreciate the much loved attributes of the Whopper (stability, ease of use and surprising performance in the waves) but is more adapt for a smaller person. Particularly for many women, the Whopper JR is that bit easier to carry and maneuver on the water.

A stable platform for all round paddling fun. Its performance in the waves has been improved with a forward V that allows for easier rail-to-rail transitions, further enhanced with the tail concave providing fast and tight cutbacks.

A "Junior Whopper", but still a Whopper nonetheless.

# 9'0" X 33" HERO

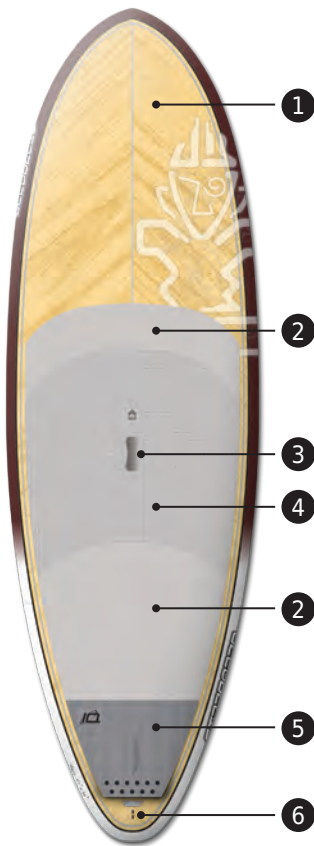

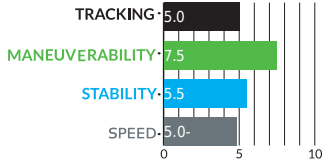

*"Super stable board that turns like you wouldn't believe."*

The Hero is the board for someone that appreciates the width of a board like the Whopper JR but wants to come down in length for the edge in surfing performance.

The Hero reacts instantly when on rail, accelerating out of turns, producing performance levels before unheard of a board of these dimensions

The stable width saves energy for surfing instead of wasting it trying to balance on your board.

# 11'2" X 32" WIDE POINT

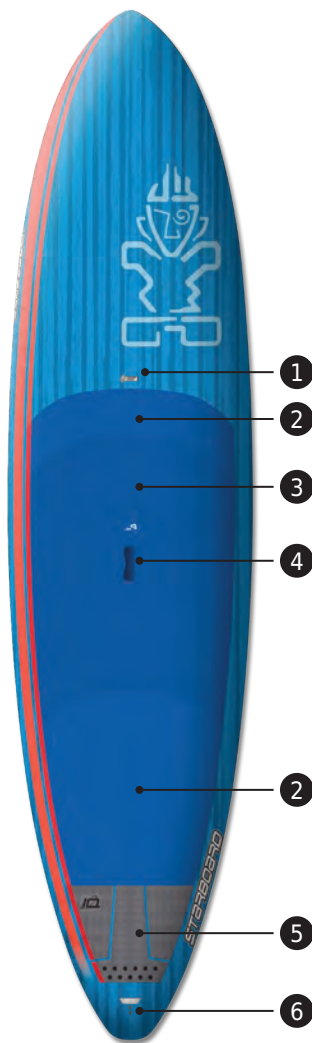

*"With more glide comes more options."*

A dynamic board that will give the larger rider up to 110 kg excellent stability and maneuverability in the surf.

It's added length over the 10'5" gives that extra glide that will get you into the wave earlier and be more versatile as a touring board, as well as being able to take the kids or dog out as well.

Heavy midsection V and double concave makes effortless rail to rail transitions down the line for generating speed, feeding into a tail concave for tight fast cutbacks.

\*Starshot is provided with Black injection molded fins

# 10'5" X 32" WIDE POINT

*"Versatile all rounder for performance in any conditions."*

The combination of extra length and width makes it very easy for the larger rider up to 105 kg to get onto a wave and then rip it to bits. From small to mid size waves, you'll be having a blast due to its bottom shape. Heavy mid section V and double concave generate speed and a rail to rail sensation when standing in the middle of the board. And when you step back to cutback, the tail V rocker and outline help to create smooth tight arcs.

Fine forward rails, mono-concave nose and ample nose kick provide an efficient smooth and safe entry into the wave.

# 8'10" X 32" WIDE POINT

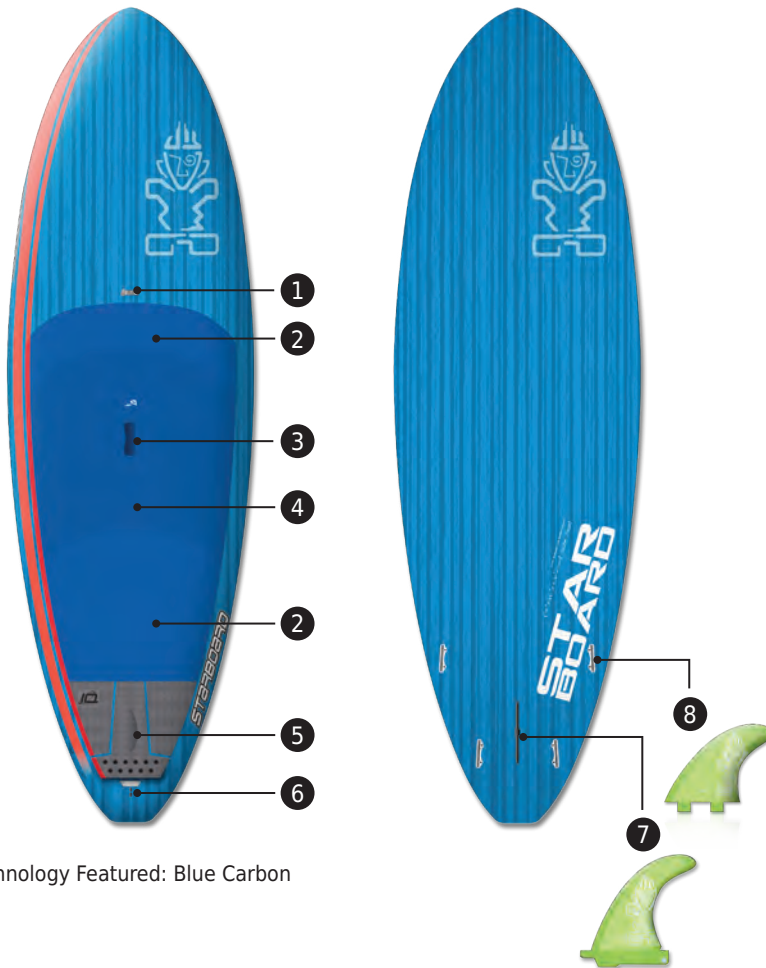

*"Shorter board for the heavier rider."*

A shorter board for the riders up to 95kg, it delivers floatation and stability with exceptional performance in a range of conditions.

Moderate volume rails, shortboard outline and progressive rocker combine for a super smooth ride with the ability for aggressive cutbacks.

It also provides the perfect stable platform for a younger/lighter rider to develop their surf skills, so there could be a battle between Dad and the kids as to who gets to ride it.

## AIR BORN WIDE POINT

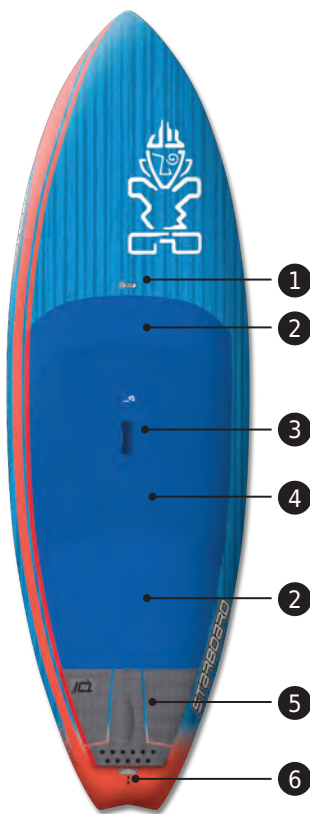

*"Maximum performance in minimum conditions."*

The largest version of the highly regarded Air Born range for heavier riders of up to 95kg that want maximum shredding in smaller surf. Thin rails and profile (thickness) combine with the width for a stable yet sensitive and highly responsive ride.

When the waves are a little gutless, drive and acceleration is provided by the mono concave bottom shape, combined with fish tail and square rails. These elements combine to create the ability to generate speed and project vertically off of the back foot.

Although a fast rocker, it's still able to fit in the pocket for tight curves with release coming from V in the tail for letting the fins go when desired.

# 8'2" X 32" WIDE POINT

*"Small board agility for the not so small bodies."*

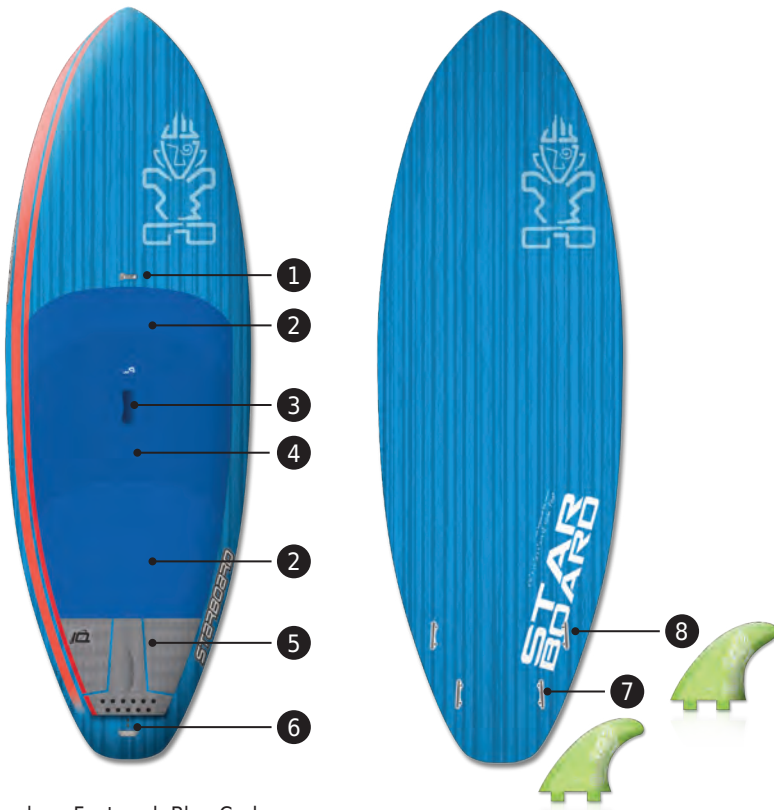

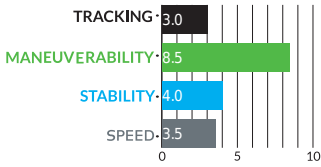

The shortest in the widepoint range, the 8'2" became a much loved favorite for its ability to provide agility for larger bodies.

Fine rails forward provide sensitivity when setting your rail and in cutbacks, while a thicker blockier tail rail produces acceleration and drive in turns.

The mono-concave bottom shape gives lift and a flat rocker in the middle of the board for speed, whilst maintaining rail curve for tight pocket turning.

Stable fast and agile. The ultimate big-man ripper.

# 9'8" X 30" ELEMENT

## "The Ultimate all-rounder"

The Element is a popular cruising board for lightweight riders and is a great option to progress into the surf.

Good glide for coastal and river cruising translates into catching waves easily. A heavy double concave V in the mid section allows for rapid acceleration and trim from the middle of the board, with a relatively heavy V off the tail making it an excellent carving board at this length.

"Mono to double concave to V in the tail"

# 9'5" X 30" CONVERSE+

*"The happy blend between glide and turning ability"*

The "+" equates to a slightly longer length than the Converse, meaning improved glide and easier entry into a wave.

It's full-length concave aids this, giving lift and life to the board. A flatter central rocker adds speed, with rail curve for smooth/rapid turning.

The "+" caters to a huge audience of lighter and heavier paddlers alike, being able to enjoy its dimensions. Lighter females will find it a good all-round board while heavier riders will appreciate its abilities in the waves.

Maximum fun in less than perfect waves.

# 9'0" X 30" CONVERSE

*"A stable short board for the heavier rider to make the most out of the trickiest conditions."*

The ideal transition board for someone heavier wanting to come down in length for more progressive/aggressive riding or a lighter person looking for a good stable allrounder.

Outline, rocker and fin configuration combine for excellent acceleration, drive and reactive turning capabilities. Moderate length and width provide a very stable platform to accelerate your leaning curve in the waves.

# 8'5" X 30"

## POCKET ROCKET

*"The shorter stable option for maximum enjoyment in trickier conditions."*

The Pocket Rocket maintains it's role as the stable short board with excellent performance credentials for riders up to 85 kg.

Fast and agile due to mono-concave bottom shape and stable with moderate rails and fuller outline, it helps the heavier rider achieve maximum shred-ability without using too much energy standing up in choppy conditions.

A popular board to get used to the size and performance before advancing to the Pro Range.

# PRO PERFORMANCE

## PRO

*HIGH PERFORMANCE DEDICATED SURF PRO SHAPES FOR MAXIMUM MANEUVERABILITY, SPEED AND CONTROL FOR HIGHER SKILLED RIDERS.*

- 
- **Target Rider:** Intermediate to high skilled riders up to 95kg.

---

  - **Construction** Available only in Carbon for increased performance

---

  - **Dimensions:** 24" up to 29" Wide offering more maneuverability and speed. All under 9ft.

---

  - **Key Features:** Narrow outline with thinner rails for rail-to-rail transitions and generating more speed. Pointed nose and squared tail. Tail Kicker Pad to push turns.

---

  - **Fins** Supplied with new FCS 2 fin boxes. Quad and thruster set up supplied with Light Core Fins.

---

  - **Conditions** Larger clean conditions yet can handle smaller waves.

---

**SEAN POYNTER**

# 9'0" X 29" PRO

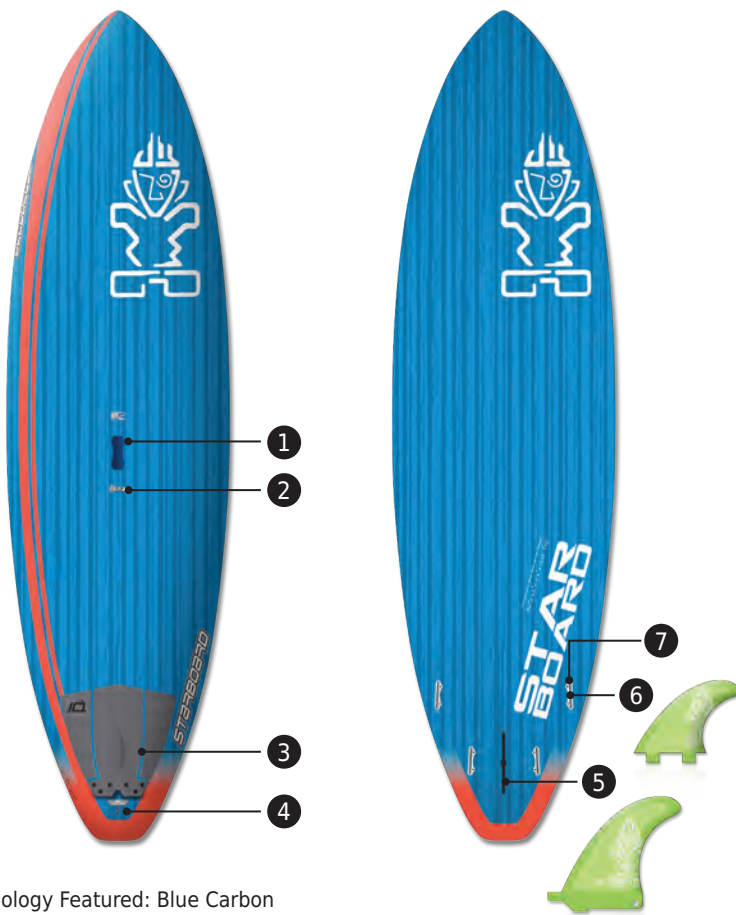

*"For the larger PRO in any conditions"*

The 9'0 Pro is the biggest in the Pro range and thus suited to heavier riders of up to 95 kg. Renowned for speed in small waves, whilst also maintaining speed in waves of consequence.

Rail and deck volume have been reduced to contain even more speed, whilst improving the board's reactivity carving off the bottom and top. It's tight pocket turning, vertical lip attacks and gouges have gotten even easier and more radical.

*"Continuous mono-concave"*

# 8'5" X 29" PRO

*"The broad spectrum Pro for any conditions"*

Still the most popular Pro board in the range for its unquestionable versatility. From double over-head hollow reef breaks, to gutless beachies, it's the one board that does it all, and with a relative amount of stability for riders up to 90kg

Drive and speed matched with tight cutbacks and vertical projection, all achieved with silky smoothness in the lines it draws.

*"Mono-concave to V off of the tail."*

# 8'0" X 29" PRO

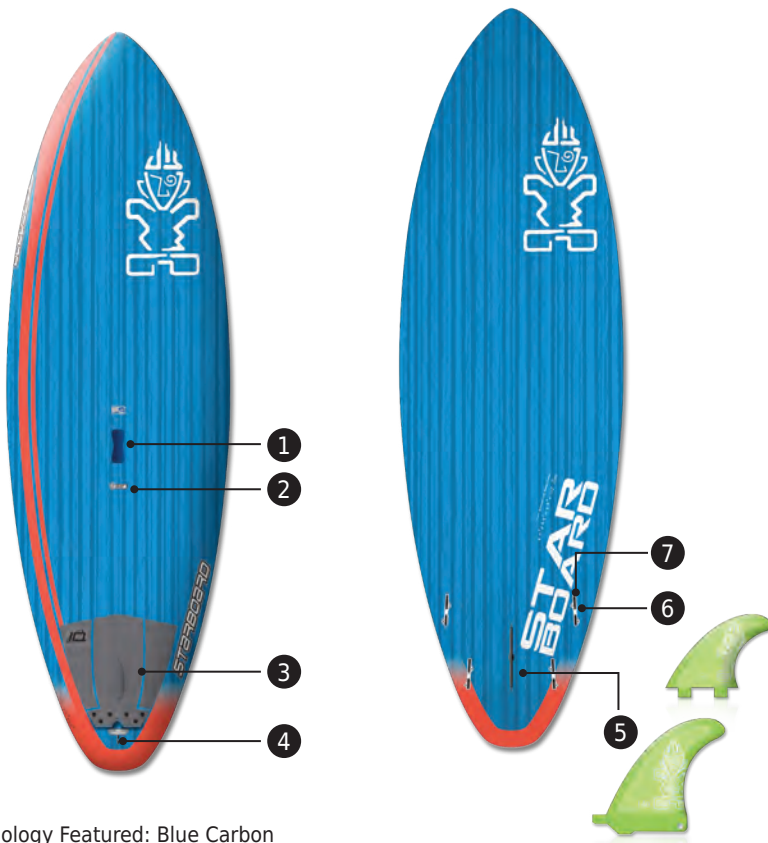

*"Stand with ease on an 8ft board"*

8ft has become the "go to" length for tight pocket turning amongst more experienced riders. The 29" came into the range for riders up to 85 kg that liked the 8'0 length, but found the stability a little overwhelming.

Holding well off the bottom in larger surf, it also generates speed in the smaller waves for tight cutbacks and lip smacks.

*"Continuous mono-concave to V off of the tail."*

# 8'0" X 28" PRO

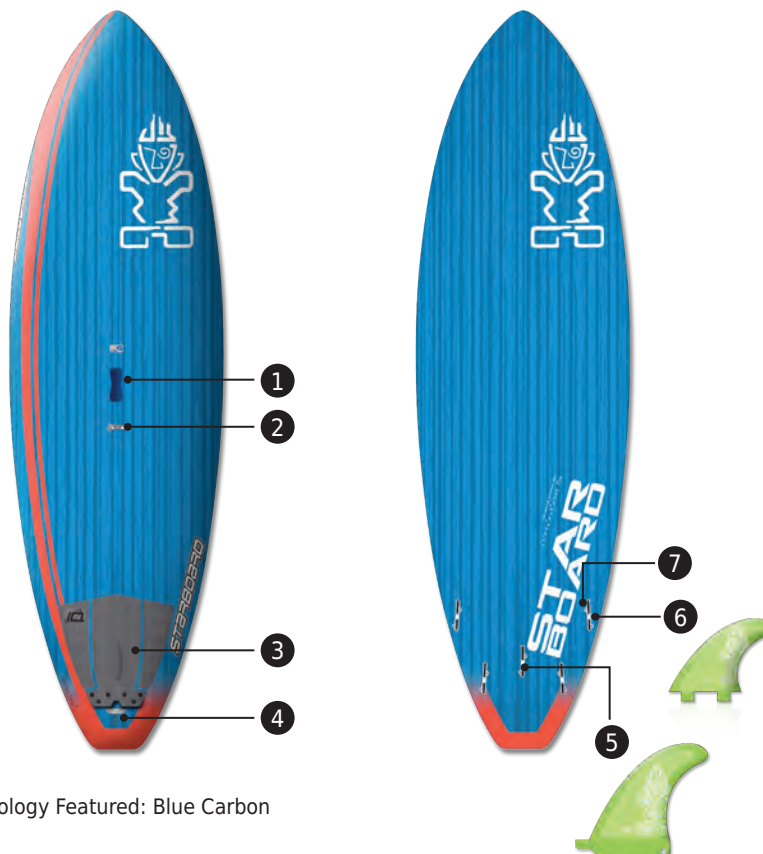

*“Ultimate all round rip stick for 65 to 80 kg riders”*

Super smooth and responsive, the slightest toe pressure will initiate a rail to project you down the line at speed.

A unique forward V to tail concave helps engage the forward rail, whilst accelerating the water through the tail as a result of the flatter rocker in the middle of the board.

The rail curve in the back half of the board makes for searing cutbacks, with the ability to hold or release depending on how the back foot is pressured.

*“Forward V to tail concave.”*

\* Technology Featured: Blue Carbon

# 7'7" X 27" PRO

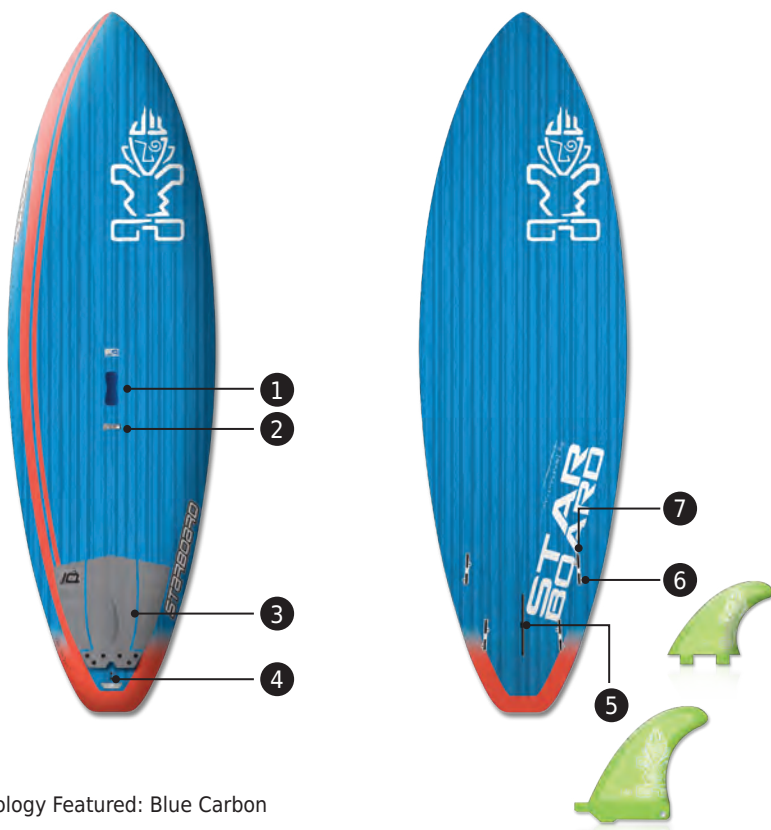

*"For the 65 to 75 kg rider the 7'7 is the perfect blend of float and rip-ability"*

The mono concave hull is fast down the center line and curvy on the rail, providing fast tight gouges and ability to re-direct vertically.

Ultra responsive rails maintain enough volume for a comfortable balance without sacrificing sensitivity. Its outline is finely tuned to match rocker and fin configurations. The latest of drops can be survived, driven into barrels or carved into tight pockets. Small or larger surf you'll find the 7'7 capable of dealing with the situation.

- 6'10" x 26.5" Hypernut

\*Blue Carbon comes standard with Quad and Thruster fin boxes. Thruster Light Core fins are supplied based on team rider performance feedback.

# 7'4" X 25.5" PRO

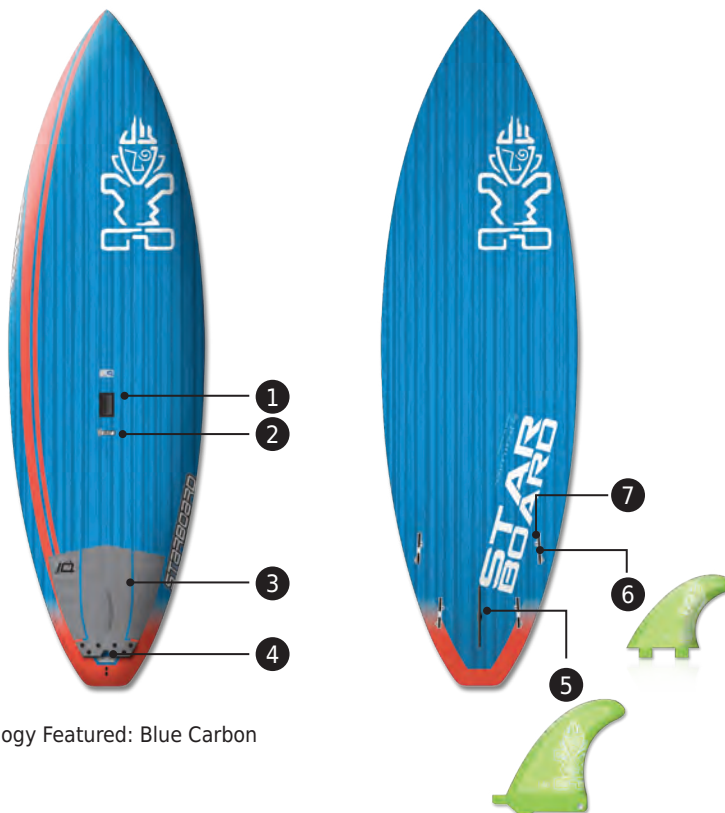

*"A consequential upgrade that will take your surfing to another level"*

The general foil of the board is thinner, optimizing the volume distribution for maximum performance. The single concave has been moved back to the side fins for faster acceleration and speed. The previous V tail has been transformed to a Double Concave V to accelerate the water through the fins. The forward rails are a thin 50/50 profile at the nose, to a 60/40 mid section for smooth rail-to-rail transitions. The tail has been squashed to offer an ultra sensitive turn. Fin positions have been upgraded to enhance response and sensitivity.

*"The 7'4" is the highest performing board I've ever ridden, hands down. It's quick down the line, lightening fast to respond on bottom turns, explodes through top turns and with all that speed, fly's high in the air when you're ready to launch. The redesigns that we put so much time into testing, modifying, and retesting have made a board that has improved performance dramatically from it's 2015 model. Not to be overlooked too, you'll see a massive quality improvement on the tail pad that just further adds to the excitement of this board. I welcome you to try the 7'4".*

# 7'1" X 24" PRO

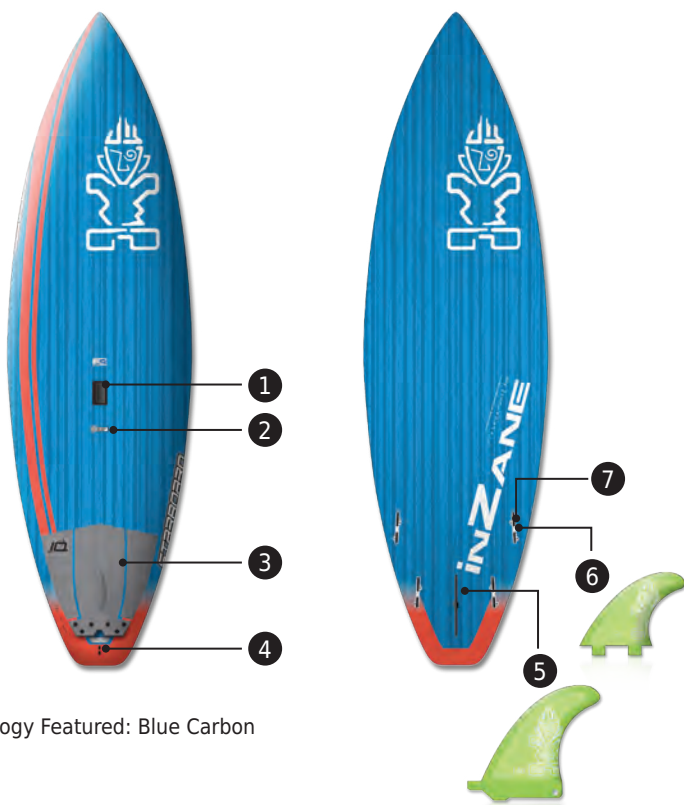

*"The InZane is everything you need to bump up your Stand Up Paddle Surfing game!"*

The new updated 7'1" Pro was directly inspired from the developments of the 7'4" Pro. Thinner rails, narrower squashed tail, Double Concave V and upgraded fin positions all contribute to increasing the performance dramatically.

*The 2016 7'1" has a new and improved shape designed to carry speed, power and flow. With a rocker and rail-line design that allows for consistent speed, powerful driving turns, and controlled high performance maneuvers, this board is exactly what you need to take out the competition or surf InZane when in the water!!*

# INNOVATION

## HYPER NUT

**COMPACT PERFORMANCE. FAST, STABLE, AND REACTIVE DUE TO ITS SHORT LENGTH WITH INSANE PROJECTION AND TIGHT TURNING FROM THE INVERTED NUT "RAILS".**

## NUT

**COMBINING SHORT BOARD CHARACTERISTICS WITH LONGBOARD STYLE OF RIDING.**

• **Target Rider:** Riders up to 110kg.

Riders up to 90kg.

• **Dimensions:** Shorter Length due to wide squared off nose and wide channel tail outline.

Available in 9'5"x29" and 9'0" x28.5"

• **Key Features:** Wide tail area and straight outline produce hyper drive and acceleration. Pulled in Nut outline curve produces faster tighter turning arcs when on rail. The channel bottom creates acceleration. A flatter rocker along the tail rail enhances speed. Tail kick of pro rocker down the center for tight pocket turning.

Pro tail outline for tight cutbacks combined with the stability in the nose from a 9' long board. Pulled in Nut outline curve produces faster tighter turning arcs when on rail. Added glide from length makes it easy catching waves.

• **Fins** Quad fin set up enhancing squirt and acceleration and speed. Rail thickness in line with the Pro range for peak sensitivity and responsiveness.

Thruster fin set up supplied with Light Core fin.

• **Conditions** Smaller mushier conditions yet can handle size.

Smaller mushier conditions yet can handle size.

# 8'6" X 31.5" HYPER NUT

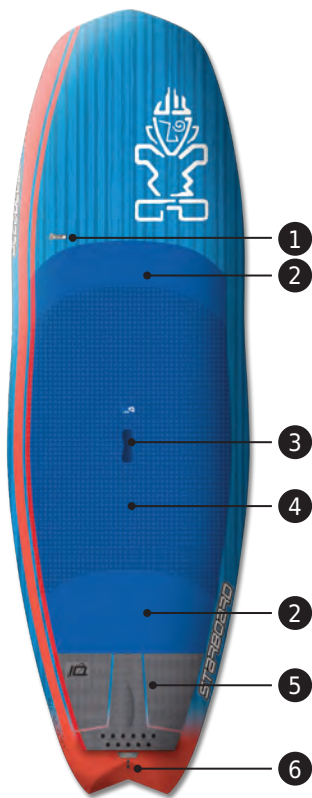

*"It feels strange to call the 8'6 a big board, but it is"*

Incredibly stable, it'll carry a heavy rider of up to 110 kg with ease, creating an experience of reactivity we're confident they won't have felt before in a board of these proportions.

The 8'6" has the best glide to get on the wave easily and quickly, ideal for smaller waves and handling large sets.

Stable, fast and reactive. It ticks all the box's.

*"Continuous flat concave to channel tail"*

\* Technology Featured: Blue Carbon

**MAX RIDER WEIGHT**

110 kg

**DIMENSIONS**

\*Starshot is provided with Black injection molded fins

# 8'0" X 31.5" HYPER NUT

*"All box's ticked for the bigger rider"*

An extremely stable board for it's length of 8'0", it defies it's size to feel a much bigger board suited to riders of up to 100 kg. But the amazing stability still retains rapid acceleration and speed, super tight turning radius for carving, vertical projection and general feeling of life in the board.

*"Continuous flat concave to channel tail"*

# 7'8" X 30" HYPER NUT

*"Ultimate stability and performance with added length"*

The 7'8" is suited to riders of up to 95 kg that want stability and glide with exceptional drive, acceleration and reactivity.

Still a relatively short board, it's exceptional balance to size ratio combined with it's lively performance makes it a highly popular size that can be thrown into most conditions.

*"Continuous flat concave to channel tail"*

# 7'2" X 28" HYPER NUT

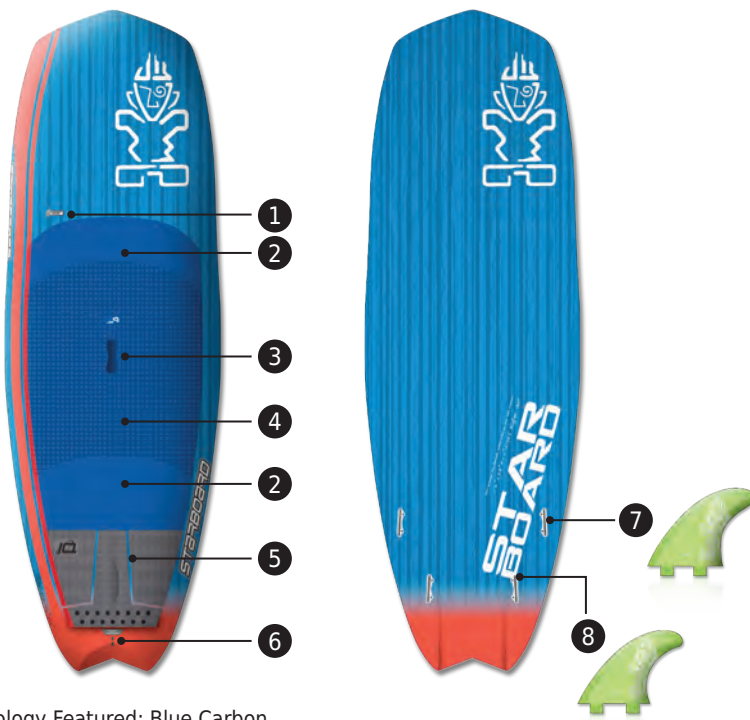

*"About to reset the height of the bar"*

This would have to be the ultimate all round board from knee high to double overhead surf for riders up to 85 kg. Accelerate through fat parts of the wave with seamless rail to rail transition to project up at the lip with speed, controlling speed in powerful surf. This board does it all.

You'll be turning tighter and faster than you ever have before, with a level of unparalleled comfort as it's such an easy board to use.

# 6'10" X 26.5" HYPER NUT

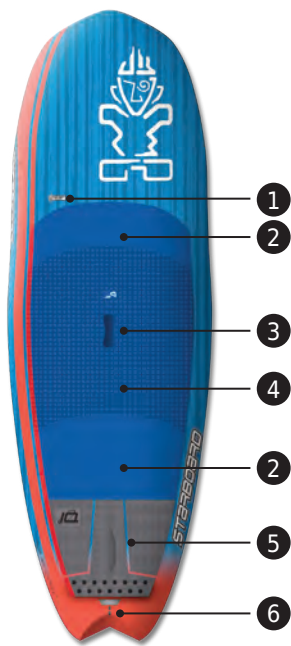

*"Power to the little people"*

Ultra responsive with it's small size, the 6'10" retains stability for skilled riders wanting to maximise maneuverability.

Predominantly for the sub 75kg rider to make the most out of the average days with acceleration through the fat parts of a wave, it also controls speed on bigger waves and fires through the fastest of hollow sections.

Ridiculous control and projection when re directing off the lip.

\*Blue Carbon is provided with Light Core fins

# 6'9" X 23.5" HYPER NUT

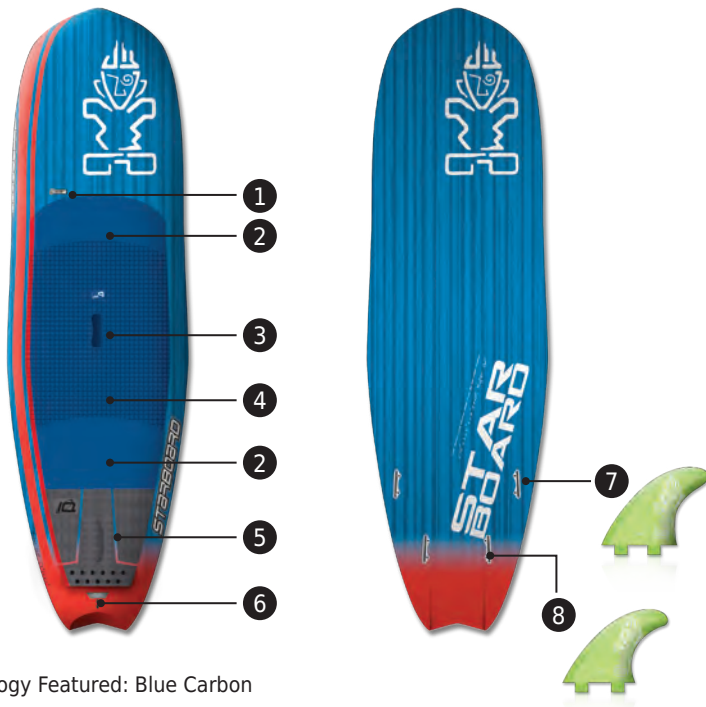

*"Hyper in all aspects"*

For the highest performance and ability to whip around with ridiculous ease, the 6'9" is for lightweight riders that are truly hyper! Stability is controlled through the wide nose and tail, making it comfortable to drop down in dimensions to a drastically narrower board at only 23.5" wide. Designed for lightweight riders of up to 60kg who would typically ride the 7'1" Pro. The 6'9" excels in less than perfect conditions yet handles size.

An ideal option for competitions, the 6'9" is responsive, explosive and hyperactive, giving you the confidence to hit bigger maneuvers and push new limits in every aspect of your surfing.

*"Continuous flat concave to channel tail"*

# 11'2" X 30" NUT

*"For the SUP long-board enthusiast, there's no doubt this is a massive leap forward."*

A variation of the 11'2" x 30" Blend for those willing to look outside the box. Maintaining the excellent glide characteristics of the Blend, the unique outline shape greatly enhances turning performance on a wave by creating a shorter board's curve within the longer board without taking away stability and glide.

*"Single concave to mid section V to tail concave"*

**MAX RIDER WEIGHT**

100 kg

# 9'5" X 29" NUT

*"For the longboarder who wants to rip like never before."*

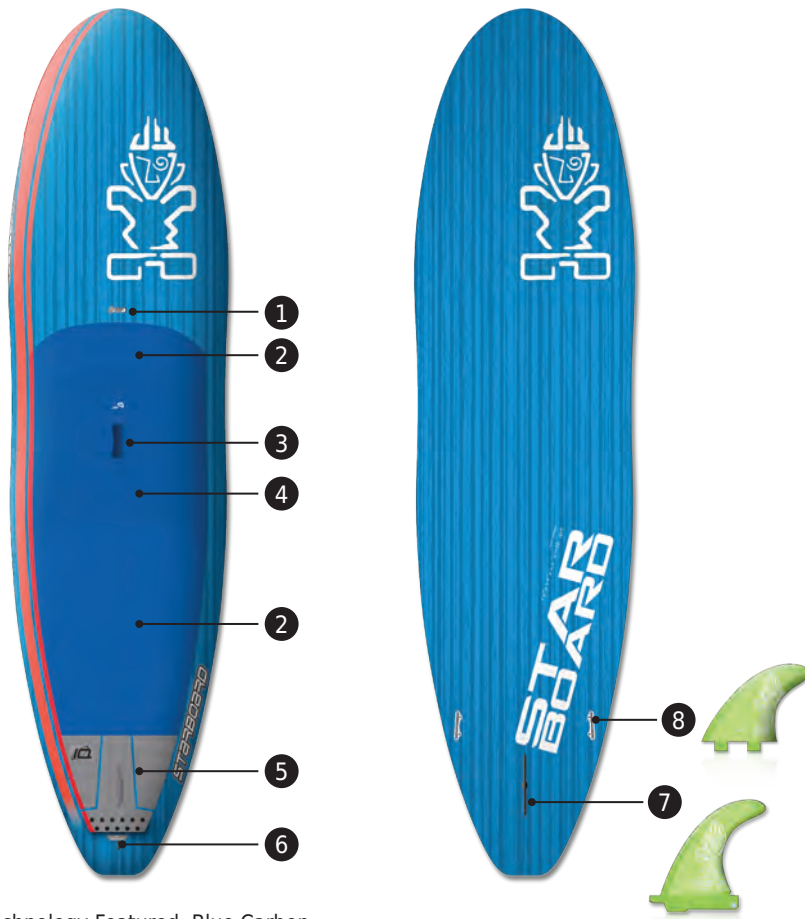

Open your mind to what possibilities the Nut can offer the longboard enthusiast. You get the glide and ability to style it up on the nose, and when you step back, you have the rail curve of a high performance pro board under your feet.

The Nut outline accelerates water as you apply rail pressure, so when you utilize the mid section V, you get incredible sensitivity, drive and speed from the subtlest of movements.

Small and gutless to large powerful waves, it has a massive wave riding range with no hindrance from the nut concept at all.

*"A one-board solution and perfect travel SUP that means you have a 2 board quiver in a single board." ~Pete Cox*

*"Concave to V to mono-concave tail"*

\*Blue Carbon and Wood are provided with Light Core fins

# 9'0" X 28.5" NUT

*“Pro performance with glide and stability.”*

With the outline curve of a 7'4" Pro infused into a board that's 9' long you really get the best of both worlds.

Added glide from the length gets you into the waves easily, while the nut outline offers fast acceleration when you initiate a turn.

Then when you step back on the board to turn, you're standing on a 7'4 Pro, which bites around for tight cutbacks on the short outline curve.

From tiny gutless beachbreaks to larger hollow waves, it's range of use is unparalleled.

# RACE

## ALL STAR

*THE ALL STAR PROVIDES AMAZING GLIDE WHILE MAINTAINING STABILITY IN ALL CONDITIONS AND CONTROL TO SURF IN BREAKING WAVES DURING BEACH RACING.*

• <b>Target Rider:</b>	Suited to all riders of up to 115kg.
• <b>Construction</b>	Lightest Carbon Sandwich Technology and Hybrid Carbon Technology.
• <b>Dimensions:</b>	24" wide for elite paddlers up to 28" for heavier riders and beginners. 12'6" length offering greater maneuverability and 14'0" for longer glide.
• <b>Key Features:</b>	Tri-concave bottom is optimized for ultimate speed and control. Slight tray with recessed deck pad for greater grip and stability. Straight and slender outline for optimum glide, control and stability. Hard chine tail bottom directing water flow and extra control in surf.
• <b>Fins</b>	Race Ultra Light Core center fin supplied.
• <b>Conditions</b>	Flat-water, choppy, downwinders and surf.

**CONNOR BAXTER**

Photographer: John Carter / Location: Maui

**ZANE SCHWEITZER**

## ACE

**THE ACE SETS A NEW STANDARD IN CHOPPY WATER PERFORMANCE.**

Medium to higher skilled riders up to 95kg.

Lightest Carbon Sandwich Technology.

12'6"x24" greater maneuverability up to 14'0"x23.5" for longer glide.

NACA profile outline with narrow tail for efficient release of water. High vertical rails create a deep tray for added stability. Flatter rocker for increased speed and ease connecting and riding bumps.

Race Ultra Light Core center fin supplied.

Open ocean and choppy waters/ upwind and downwind conditions.

## SPRINT

**THE FASTEST FLAT-WATER RACE BOARD FOR MAXIMUM SPEED AND EFFICIENCY, AIMED AT BOTH SPRINTS AND LONG DISTANCE RACES.**

Higher skilled and lighter weight riders up to 90kg.

Lightest Carbon Sandwich Technology.

Dimension: 12'6"x25" for greater maneuverability and 14'0"x 23" for longer glide.

Narrow outline, flat profile and foiled nose for optimum glide and speed. Complex concave bottom combined with flat rocker for linear glide. Dug out inner deck rail offering lower center of gravity for maximum stability. W-shape tail funnels the water for efficient release.

Race 24 Light Core center fin supplied.

Flat water to light chop.

# RACE

## PERFORMANCE COMPARISON CHART

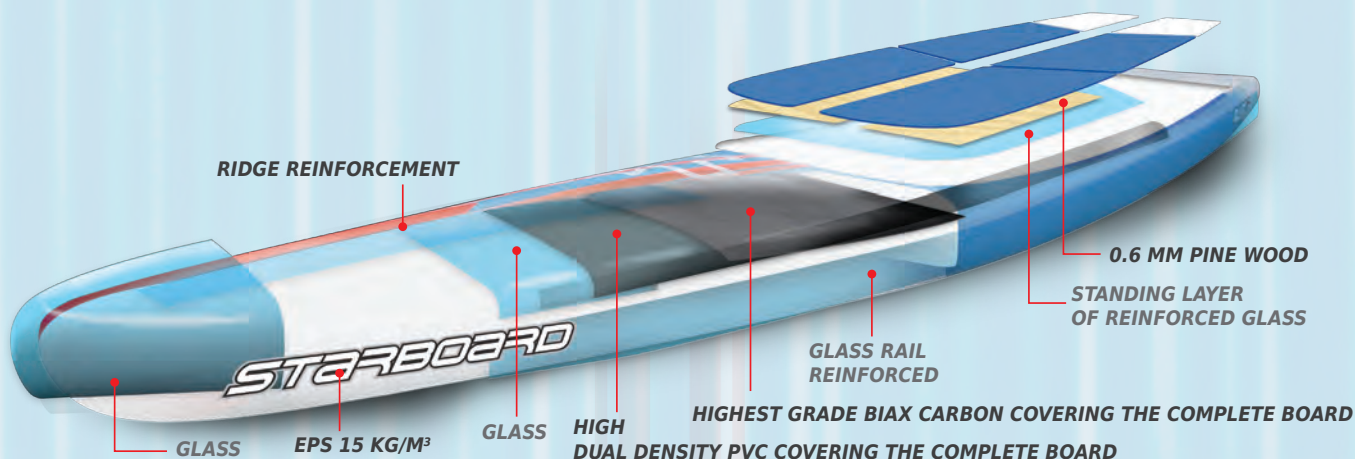

- ALL STAR
- SPRINT
- ACE

	ALL STAR	SPRINT	ACE
Speed	9	10	8
Efficiency	8	10	7
Upwind	9	9	10
Surf	10	6	4
Downwind	10	6	7
Light Downwind	10	8	10

# CARBON SANDWICH

*Lightest weight, efficient flex and extra strength.*

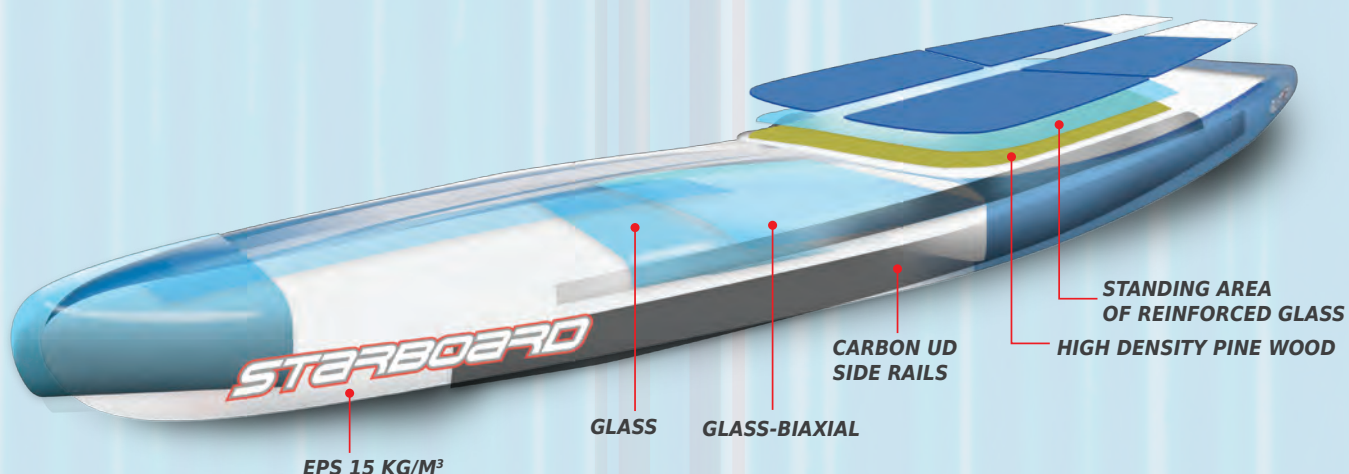

## Features include:

- Super light weight biaxial carbon is laminated over the entire hull for the lightest weight, best strength ratio and most efficient flex. The mid section of the board has stiffer UD Carbon side stringers to maintain the rocker in that critical area, thus optimizing glide.
- Thin high density PVC is used on the entire board minimizing resin uptake and maximizing strength. 0.6mm thick wood reinforcements are localized right below the standing platform to further enhance the longevity of the extra high density PVC sheet on the tray.
- This is the lightest and strongest race board construction we have ever offered.

# HYBRID CARBON

*This light weight hybrid layup, offers a good weight at great Strength*

- The full wrap of biaxial glass fiber covered by military grade plain weave gives great impact resistance for its weight and also provide a good Flex Pattern.
- The unidirectional carbon rail bands enhance this construction by making it longitudinally stronger and providing faster recoil.
- The standing area is reinforced with 2 wide strips of 0.6mm thick Australian pine to prevent heel marks over time.
- The Hybrid Carbon technology combines performance and great value.

# BOARD OVERVIEW: SURF / ALL WATER

The All Star provides amazing glide while maintaining stability and control to surf in breaking waves during beach racing.

# 14'0" AND 12'6" ALL STAR

*"The Racing Revolution".*

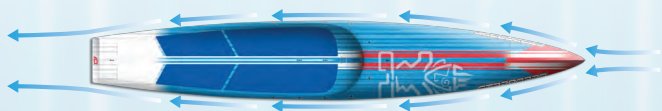

For 2016, the challenge was simply to design one board that could outperform competitors in every category. The design morphed the concept of the much-loved AllStar, in particular its rail stability, combined with the speed from the bottom shape of the Race.

The direct feedback from testing with our winning International Team Riders helped bring this board to life, allowing us to fine tune and push limits to produce a revolutionary design superior to anything seen before. Mat Rauzier and Svein Rasmussen led the development with support from Connor Baxter, Titouan Puyo, Bart De Zwart, Zane Schweitzer and Beau O'Brian.

## STRAIGHT AND SLENDER OUTLINE

*For optimum glide, control and stability.*

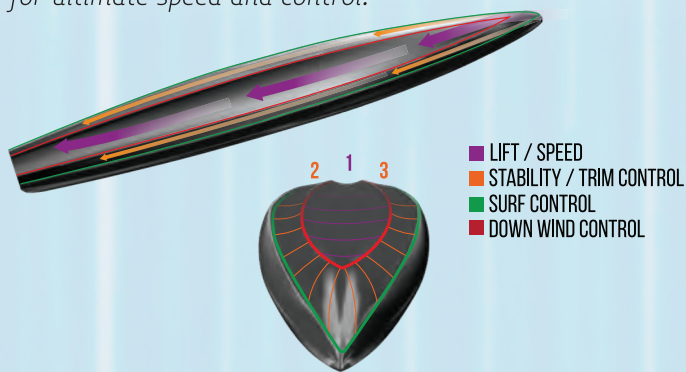

## DOWNWIND ORIENTED PROFILE

*Increased sensitivity for catching bumps.*

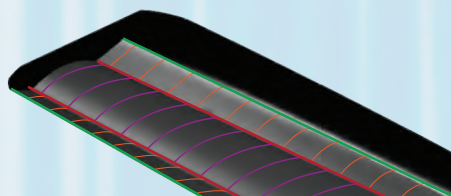

## TRIPLE CONCAVE BOTTOM

*The Tri-concave bottom is optimized for ultimate speed and control.*

## HARD CHINE TAIL BOTTOM

*Double release edge to direct the water flow and extra control in surf.*

## FLAT PROFILE

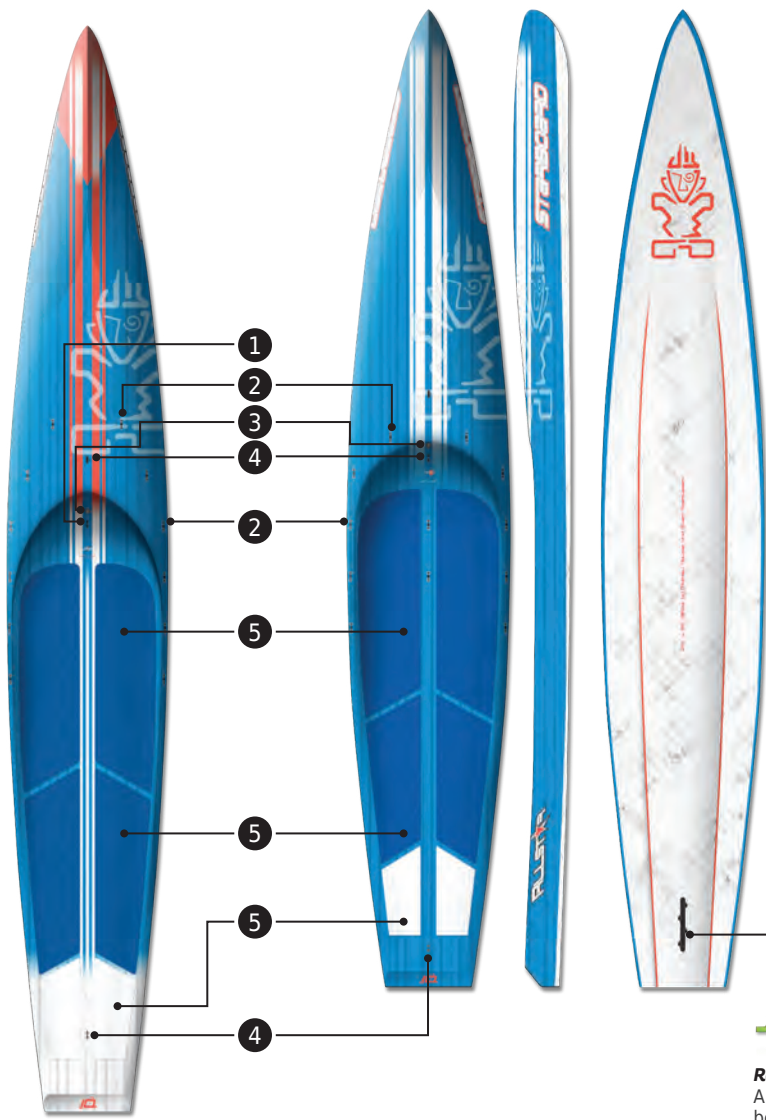

- Rail Tuck = Control On Wave
- Center Channel Out Line Creating Hard Chine = Trim Control In Down Wind
- Outer Concave = Control Stability
- Center Stringer = Concave Bottom Speed & Lift

## SLIGHT TRAY

*For more stability in wave.*

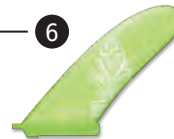

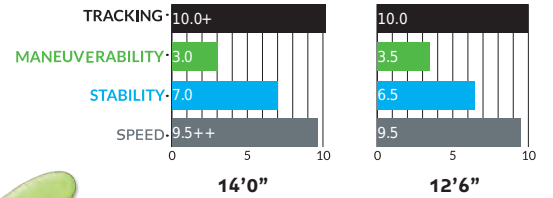

**FEATURES**

- 1 FCS insert
- 2 Handle insert
- 3 Vent plug
- 4 Leash insert
- 5 2mm EVA Crocodile skin
- 6 Race Ultra Light Core

# 14'0" AND 12'6" ACE

*"The Ultimate choppy water champion."*

For 016 the ACE has further evolved in its design and performance:

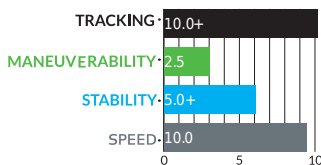

Lowered rocker line improves the acceleration and entry onto bumps, connection between waves and speed on flats. Having a board that can perform and excel in these conditions is critical for downwind races and open-ocean conditions.

The rails have been raised in height to restrict water entering the tray, decreasing excess weight and drag, while providing secondary stability and pop in and out of chop. The cockpit standing area has been extended for added sensitivity to trim up and down the board to stay forever-catching bumps. The high and vertical sidewalls lower the center of gravity for the rider to exert maximum power with every stroke without becoming unstable.

Widening the tail inside the tray offers more room for placing your feet back for improved stability and buoyancy when buoy turning. Added volume in the tail forces the tail to pop up immediately once submerged, minimizing drag.

The NACA profile outline with its narrow tail provides an incredibly efficient release of water.

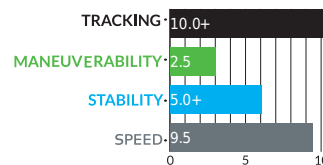

For extra stability in chop and effective support for buoy turning, exclusive foam wingers that fix onto the tail are available aftermarket.

# 14'0" AND 12'6" SPRINT

*"Fastest board on the water".*

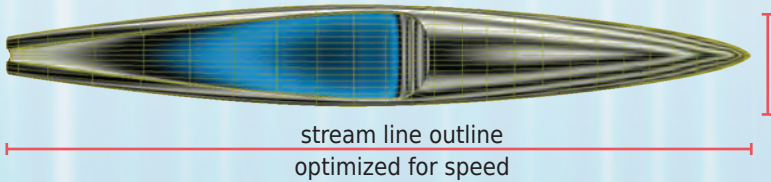

Since its 2015 release, the Sprint has been widely acclaimed as the fastest flat-water race board with some of the highest winning results.

The key to the Sprint's success is the intricate bottom shape that offers versatility in both flat-water and ocean chop, with cross rockers providing plenty of curves giving control, while the flat profile maximizes speed. The Sprint's flat bottom shape delivers an even glide, distributing the weight throughout the entire board, reducing any bouncing or pitching effect. The glide gives a hovering sensation on the water instead of plowing through it.

The complex concave and rail shape has been designed using the Bernoulli principle to direct and precisely control the flow of water from the nose through to the tail, maximizing acceleration and minimizing drag. The distinct "W" shape tail funnels the water through the center channel for the quietest and smoothest release.

Stability is controlled through the dug out inner deck rail shape, which allows the rider to hold a wider stance with a lower center of gravity, increasing reactivity to the smallest chop.

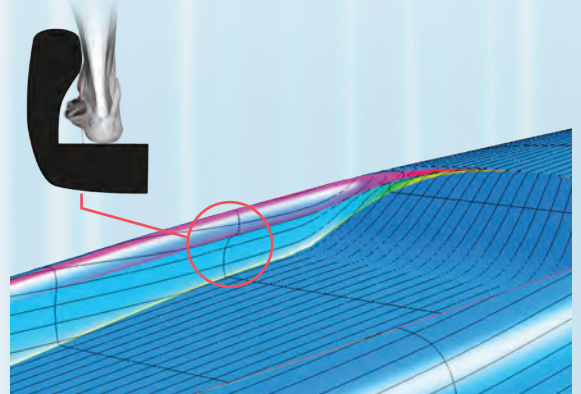

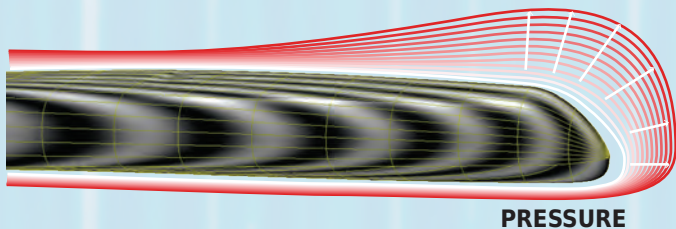

## SPEED OUTLINE

## FOILED NOSE PROFILE

Foiled nose creates a dynamic lift when nose is submergent on a wave.

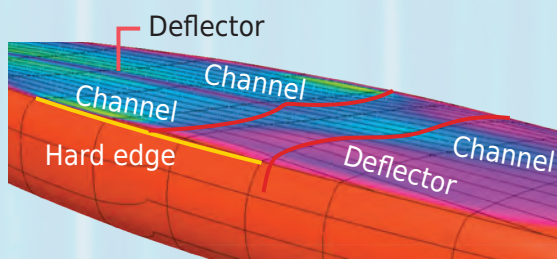

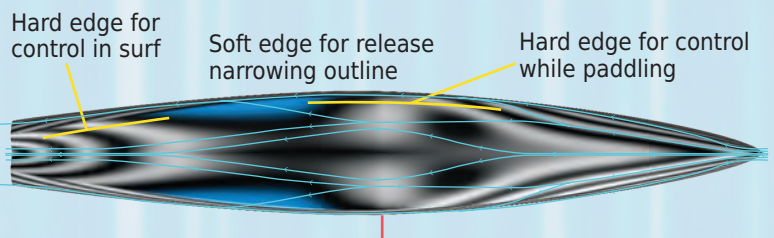

**LIFT**  
Due to depressure

## ERGONOMIC TRAY

Deep tray for low center of gravity and stability. Ergonomic dug out inner rails for increased foot space and comfort

## HYDRO-DYNAMICALLY OPTIMIZED BOTTOM

# 17'4" X 28" ACE GT (UNLIMITED)

*"If you like catching bumps then the Ace GT is the answer."*

The Ace GT 17'4" x 27" catches bumps like nothing else and connects one wave to another like a dream. The board is stable, enjoyable and effortless to paddle. With its long length, it has a very fast groundspeed designed to make it an exciting ride for intense downwinders and longer distance races. The iconic Ace design with distributed volume in the nose and a slender tail stops the nose from diving both upwind and downwind. A favorite for open ocean conditions, the GT is the board of choice for International Rider Gaetan Sene for long distance downwind runs.

If you are tired of kayakers passing you with their long slender hulls, the ACE GT is the game changer. This board is also cool for unlimited downwind races.

# 17'6" X 23" SPRINT (UNLIMITED)

*"Speed unlimited, the World's fastest paddle board."*

This board design was achieved by pushing all physical and scientific limitations, keeping only one thing in Mind: unreal speed !!

Optimum beam / length ratio and prismatic coefficients make this beast the ultimate speed machine.

Designed as a flat water board with a Race 24 fin, this board does extremely well in light chop when equipped with an Ocean Fin Race 45 which has been specially designed to drastically enhance the stability of the board by moving its center of effort deep under the board, creating high momentum and transversal stability.

The Sprint Unlimited is available in a sole, state of the art triaxial carbon technology, exclusively used on the Unlimited, allowing a board of its size to weight 11kg to stay stiff in flat water for best energy transfer, yet allowing a high recoil flex in ocean conditions.

**DIMENSIONS**

# EXPLORING

**EXPLORE WITH FAST AND STABLE BOARDS. THE TOURING LINE IS A NEW DIMENSION FOR PADDLERS WANTING THE MOST OUT OF THEIR JOURNEY.**

- **Target rider:** Stable for all paddlers of up to 120kg with added volume to carry gear.
- **Construction:** Available in most technologies; Carbon, Wood, Electric and Starshot.
- **Dimensions:** From smallest 9'6" x 29.5" Pocket Touring up to 14'0" x 30" Elite Touring, as well as the larger 33" Fishing models.
- **Key Features:** Racing shape design for speed, stability and great tracking. Slender nose and narrow outline for fast and smooth glide. Bungee tie downs to carry gear and FCS inserts for lights and other accessories. Wide W-shape tail funnels the water for an efficient release.
- **Fins:** Dol-fin22" center fin on most models, Director fin for the smaller Pocket Touring.

# BOARD OVERVIEW: EXPLORING

Explore with fast and stable boards. The Touring line is a new dimension for paddlers wanting the most out of their journey.

# 14'0" X 30" EXPEDITION

*"The board for one or multiple day adventures and expeditions."*

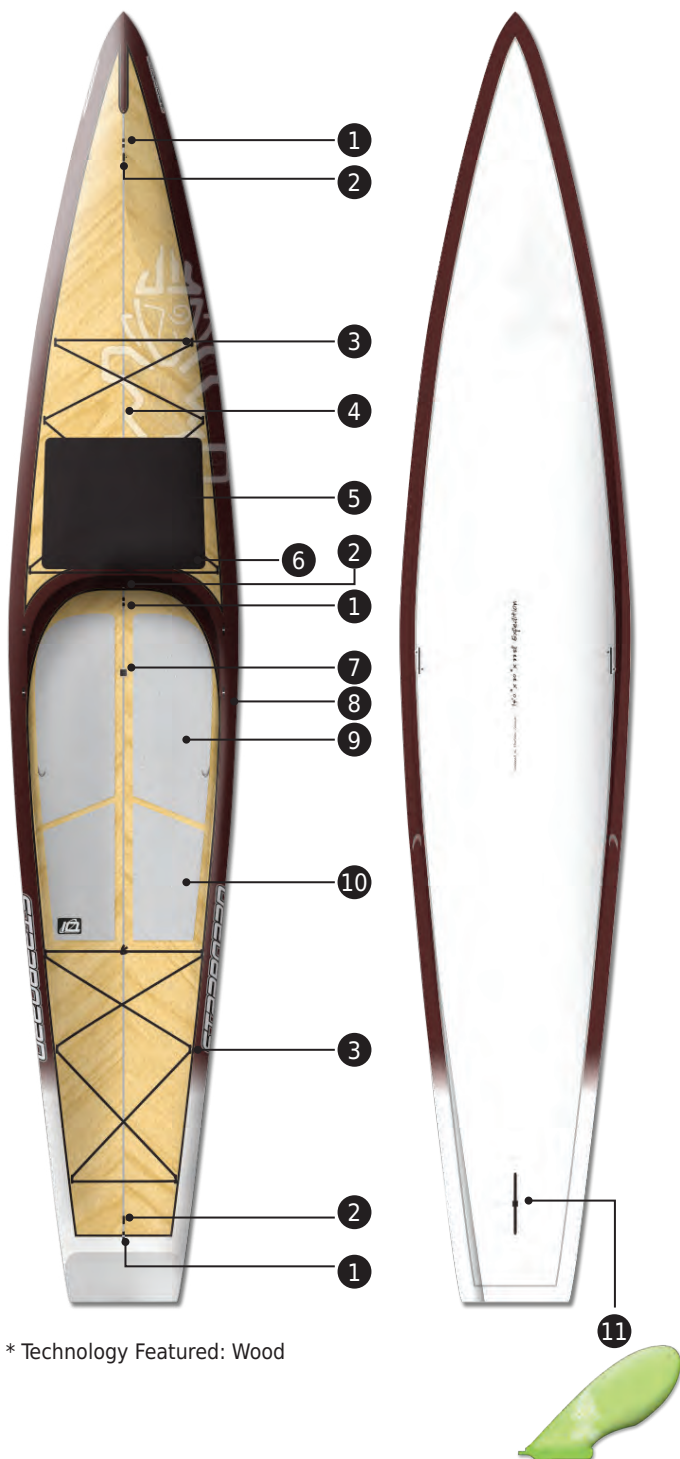

After all the crossings and expeditions all over the world, Bart de Zwart had a clear idea of the perfect expedition board. It had to be fast yet stable with enough volume to carry gear and supplies if needed. It also had to be multi-functional: ready for a day trip with family or a 7-day solo adventure. The Expedition is all that and more. With the input from Bart, the Expedition was created with two inside compartments to stow gear, water or food and many options to tie down even more on deck. The extra side fin options and a front rudder will let you stay on course even in windy conditions. There are many small details which make this board complete: plugs for towing, leashes, GPS, compass and even a deck track for windsurfing.

Bart will use this board for a 4-day open ocean crossing, a SUP adventure in Africa and also for an exploring day along the coast with his family.

With the race bottom shape and slightly higher nose, this board is designed to go anywhere from flat water, to rivers to open ocean.

Go Adventure!

# 14'0" X 30" ELITE TOURING

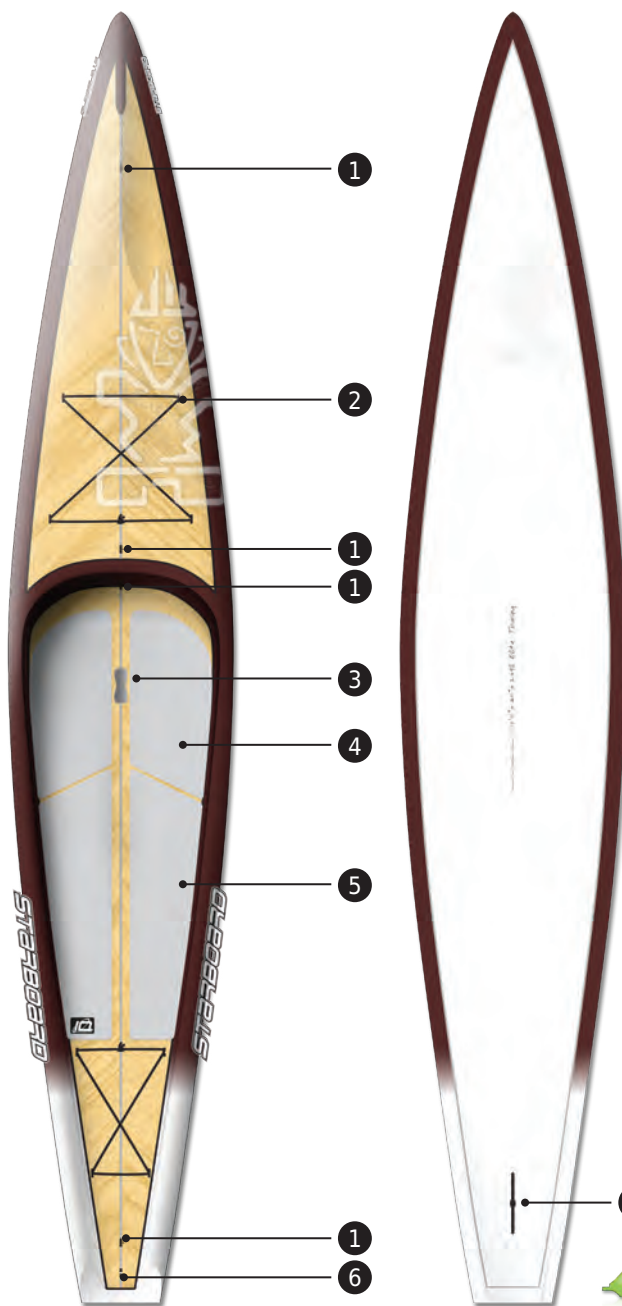

*“Longer is always faster and this 14’0” x 30” Elite Touring maximizes every inch.”*

The Elite Touring 14’0” x 30” is for the paddler who wants the fastest possible speed out of an easy-to-ride board.

Within a couple of strokes, you feel that the board just wants to keep gliding forwards, allowing you to cover distance quickly with minimal effort. The lean outline shape is narrower in the nose and tail, while keeping a wide standing area for increased stability and comfort to conserve energy.

The added volume in the nose and tail allows you to comfortably access extra baggage secured in the two bungee tie downs, without sinking or becoming unstable. Equipped with FCS Inserts for the option to install lights, GPS or cameras for exploring new adventures.

ELITE TOURING

*"From racing to gearing up for the next adventure, the 12'6" Touring does it all."*

Multifunctional, super fast yet incredibly stable. This design will open new endless possibilities to discover the adventurer within.

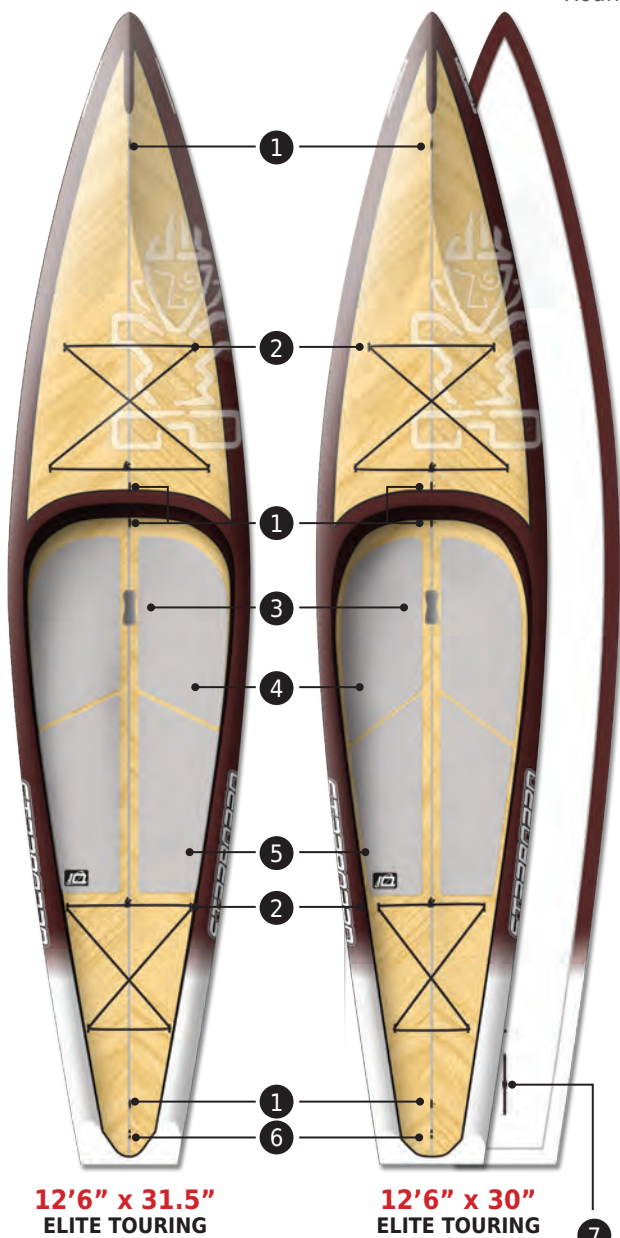

*"The perfect companion for flat-water expeditions. Explore your coastline, your waterways or even embark on some more challenging downwinders. This design will never let you down. Also a great alternative for a more stable race board and for the family activities." ~Franz Orsi*

Equipped with two bungee tie downs to carry extra gear and four FCS inserts for installing lights or GPS.

The wider **12'6" x 31.5"** Elite Touring is quite a bit more stable than the 12'6" x 30" Touring and as it has more volume, it can carry more weight for baggage and heavier riders.

The slimmer **12'6" x 30"** Elite Touring is fast and easy to paddle, great for the riders who want efficiency, ease and control.

## ELITE TOURING

*"Extended glide with greater maneuverability to explore tighter waterways."*

The Elite Touring 11'6" x 29.5" led the direction for shorter Touring boards while maintaining speed, tracking and stability. The slender nose pierces through small chop while volume distribution in the rails and concave bottom shape provides the buoyancy for fast glide and stability.

With less length, the 11'6" is lighter and more manageable to transport. The aft fin box supports great tracking, reducing the amount of times you have to switch sides when paddling.

Equipped with two bungee tie downs to carry extra gear and four FCS inserts for installing lights or GPS.

# 10'6" X 29.5" 9'6" X 29.5" POCKET TOURING

*"Flat-water expeditions get even easier with this hyper-compact yet incredibly fast design."*

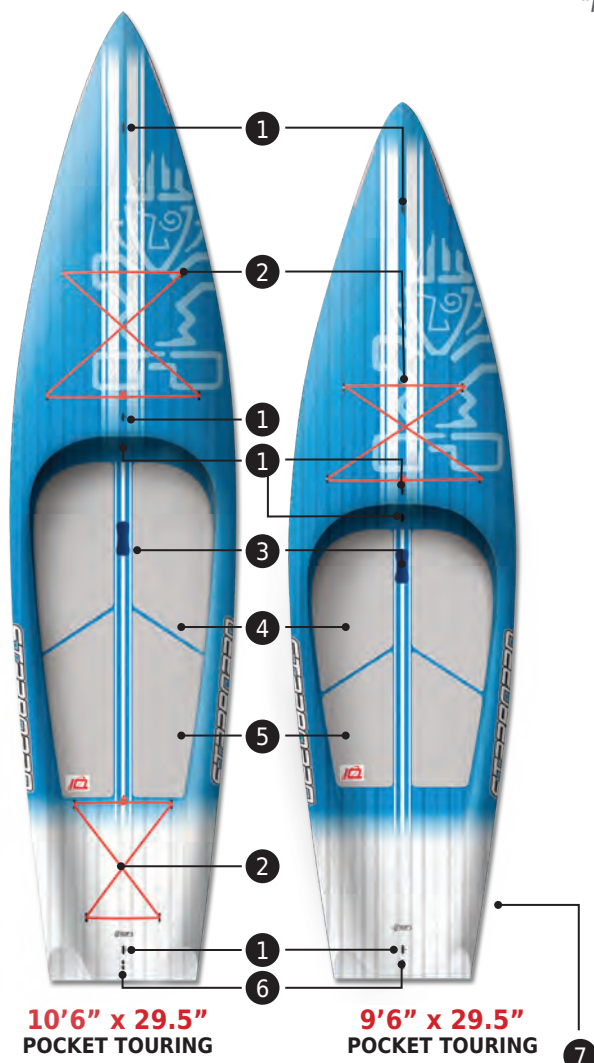

*"The Pocket Touring is my go-to board for everyone of my SUP mini-adventures. I like to load it with a few waterproof bags, an inflatable tent, some camping food and leave the noise of the city for a couple days alone in the wilderness. This is where I find myself free."  
~ Franz Orsi*

The unique oversized Director Fin and Fin Box are fitted close to the edge of the tail, providing exceptional tracking from a board of its size.

The **10'6"** Pocket Touring delivers a faster top speed from its longer length and with the increase in volume to 227 liters, it is most suited for slightly heavier riders of up to 85kg. The 10'6" is perfect for those that don't want a big board but still want to go fast and feel stable.

The **9'6"** Pocket Touring being the most compact shape accelerates well with its low weight and has an agile feel. It easily keeps good ground speed and is faster than a 12'0" all-round design. The shorter length is a good option for lighter paddlers of up to 80kg who want a board that is easy to carry in and out of the water, simple to transport and saves space when storing.

# 12'2" X 30" FREERIDE

*"Ultimate glide and speed on an all-round board."*

The Freeride is a hybrid concept, taking some of our race board development and applying it to an allrounder shape. It is designed to fit in the all-round (surf class) race category. Initially it appears like an all-round cruising board, but as soon as you start paddling, you unleash the racing DNA. The board is extremely versatile and user friendly, a thrill on a downwind run or friendly race, but also ideal for cruising your favorite area with minimum effort. The wide nose section makes it extra stable. The nose rocker has been traded for a chamfered double concave nose, offering amazing water deflection. Now the icing on the cake: the Electric Blue version has become an amazing windsurfer, offering an unmatched experience.

*"Double-concave V at nose, merging to single concave mid- to-tail sections"*

**MAX RIDER WEIGHT**

# 11'6" X 29.5"

## PADDLE FOR HOPE

*"The Starboard Paddle For Hope 11'6" x 29.5" Touring, inspired by Karin Horen"*

*"The Paddle For Hope is a celebration of life. Our goal is to give back some strength and confidence to women who have been diagnosed with breast cancer, and give them the chance to start healing through paddleboarding."*  
*- Karin Horen, Paddle For Hope Ambassador.*

After removing from breast cancer at the age of 26, SUP fitness instructor and mother-of-three, Karin Horen made a promise to help others on the same journey, and in 2011, together with volunteers and Starboard NZ, Karin initiated the annual Starboard Paddle For Hope charity event; a fun SUP festival to raise money awareness for breast cancer rehabilitation.

In 2014 Karin had breast cancer for the second. She underwent a double mastectomy, chemo and radiotherapy, and reconstructive surgery, all while using paddle-boarding to help her recover.

Karin is now working with Lou James of Pinc and Steel Cancer Rehabilitation Trust to develop PaddleOn, a SUP rehabilitation program for men and women living with cancer or its effects. Starboard is donating all profit from sales of this board to Pinc and Steel.

The board features artwork from The Painted Warrior, by NZ artist Nikki Sorich. In the original painting she sits gracefully in a small paper boat on which is written by her child -"love, hope, courage, faith and family"- words chosen to represent a woman's journey with breast cancer.

# 12'6" X 33" STEALTH FISHERMAN

*“Silent, smooth and stable”*

Inspired by Jim Drakes legacy K-15 shape, the Stealth Fisherman adopts a racing style hull for the smoothest glide. The distinct Round V Nose slices through the water, creating a silent glide without disturbing the fish. Whether preparing tackle or reeling in the catch, the 33” wide hull offers a super stable platform to comfortably move around on the board. The slight tray increases stability, while the raised rails limit the catch from jumping over the edge.

Paddle freely while your rod is held securely in the Scotty Mount Inserts, or sit back and enjoy lunch and wait for the bite. The Fish Ruler is positioned on the deck to measure the size of each fish and store extra gear with bungees attached on the nose and tail.

Aftermarket accessories include the Cooler Box, a clean storage solution and also the perfect seat while waiting for a bite. Use the Gear Rack to store and easily access extra tackle, keeping it high off the deck and dry.

Inspired by nature, and almost silent, the Stealth allows you to blend into the environment and completely immerse yourself into the action, without scaring off the next big catch.

# 14'0" X 28" 12'6" X 28" ASTRO RACER 28"

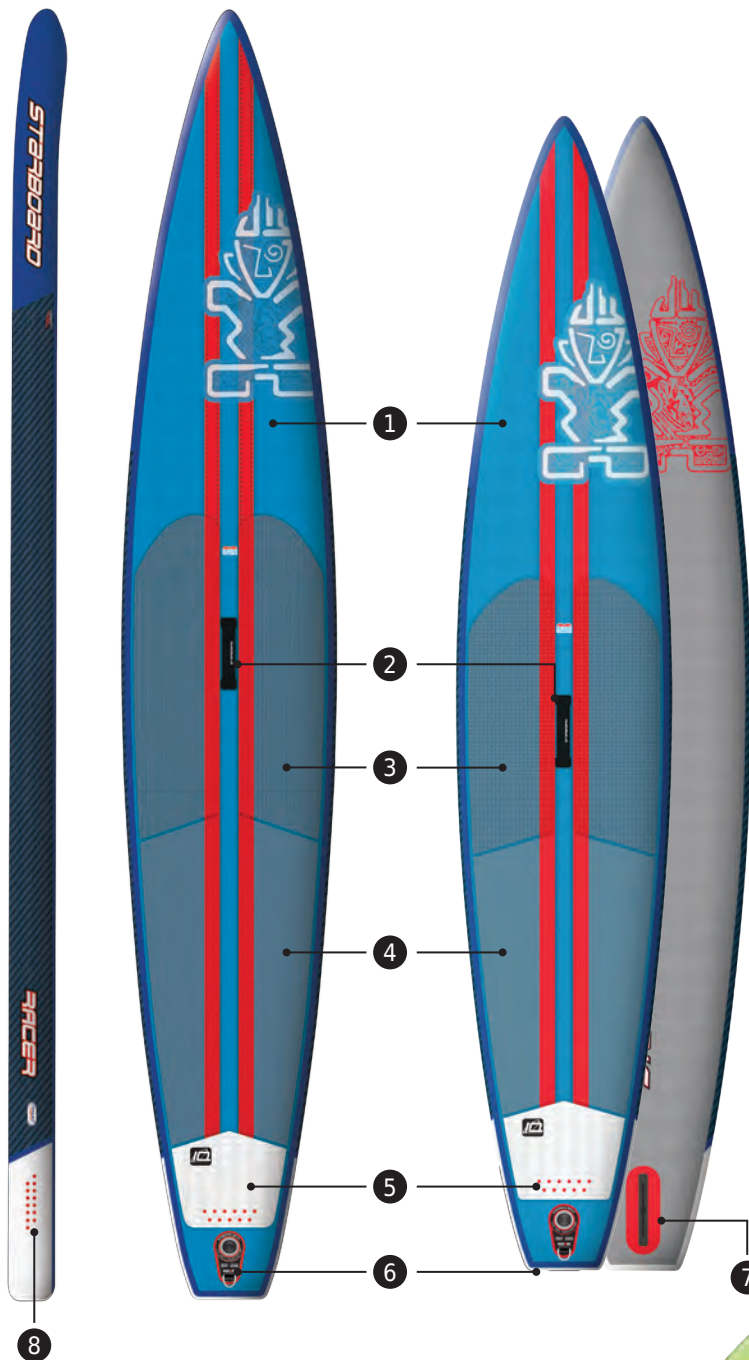

*"Added width for additional comfort when conditions get choppy."*

This new Astro Racer 28" is a great addition to our range. Featuring great racing performance for racers over 80 kg or those who want a board with added stability for more comfort in choppy conditions and downwind races. The added width at 28" bridges the gap between the speed and performance from the 26" Racer, as well as combining the extra stability offered from the current Astro Touring 31".

Starlight technology maximizes stiffness at the lightest possible weight that is truly groundbreaking in performance.

Don't be fooled by the inflatable connotation, this is a true race machine aimed at the most demanding racers.

A perfect combination for creating a well balanced behavior in ocean swell and flatwater, with enough rake to go through seaweed.

# 12'6" X 26" ASTRO RACER

*"A true racing machine that fits into a backpack."*

The Astro Racer is the fastest inflatable board on the market, designed to optimize speed, stiffness and tracking at the lightest possible weight. The weight of your board can be critical to winning a race. Therefore the development of the 2016 Racer focused on stepping up the level of performance using the new Starlight Technology weighing in the 7kg range, making it the lightest race board we have ever offered.

The shape has been redesigned to offer a straight outline for improved tracking and speed. The nose has been perfectly foiled and has a flatter rocker for enhanced hydrodynamics and increased glide.

The new Starlight Technology includes Twin Dual Stringers on the deck and high strength Carbon Kevlar Stiffeners on the rails, creating an ultra stiff board that will make you forget your paddling an inflatable.

**NEW**

# 14'0" X 31" ASTRO TOURING

*"Pack all your gear and begin a new adventure"*

The Astro Touring is the board for a family day trip, a weekend exploring trip or even those far away expeditions you have been dreaming about. The new shape has a great outline for good glide and speed for any short or long journey. Accompanied with the new Astro Magic Bag with its rolling wheels, making it the ideal travel partner for any trip with a train, car, boat or on the plane. Just bring it along, pump it up and start exploring.

What makes this board different is the option to bring gear and still have a very stable and fast board. The Touring is the only board to have an extra bungee fitted on the tail, so no matter how long you travel, you have multiple options to carry your gear. Use the special FCS inserts to attach your GPS, camera or drinking bottle. The Scotty inserts provide even more options to attach fishing gear or an outrigger.

Let the adventure begin!

**MAX RIDER WEIGHT**

- 14'0" x 30" Elite Touring

# 12'6" X 31" ASTRO 11'6" X 30" TOURING

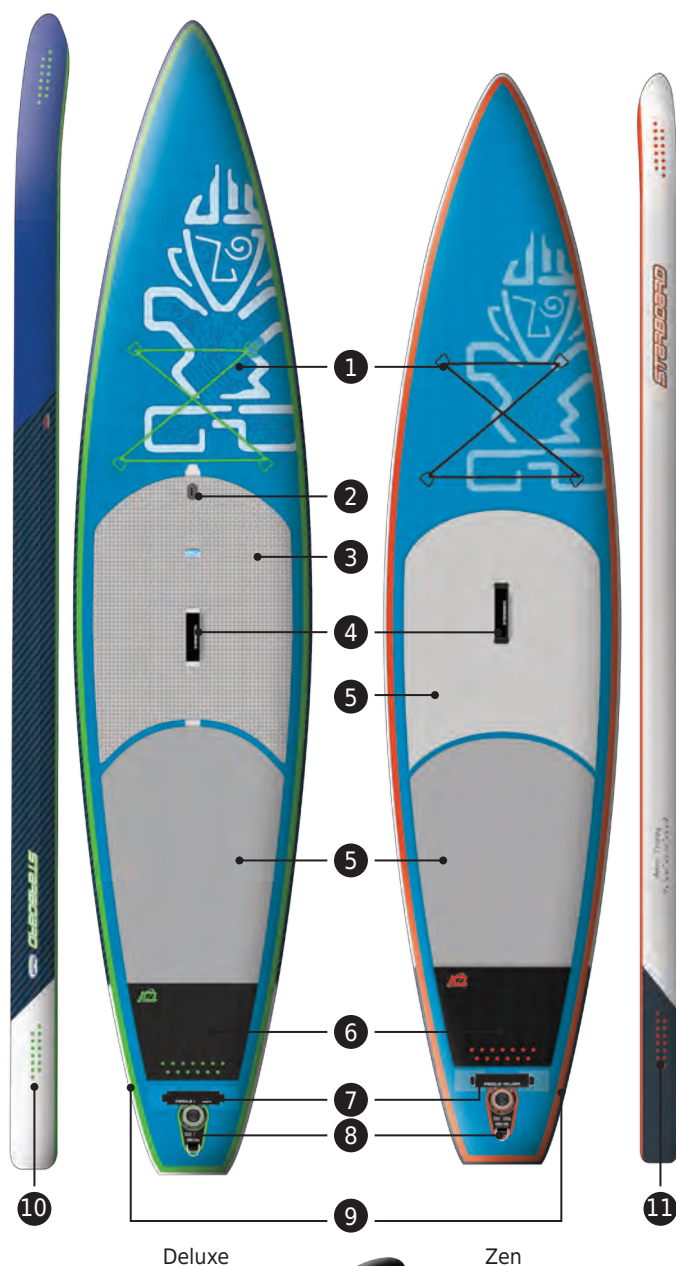

*"An improved shape for our most popular boards"*

Our Astro Touring boards have cruised lakes, rivers, bays and oceans all over the globe. We have seen them on podiums of many local races. The rails are reduced, creating a lower waterline for added stability, the narrow nose pierces through the water and the rocker is lowered to maximize glide and speed.

Featuring 3/4 EVA deckpad, paddle holder and bungee tie downs for storage.

The **12'6"x31"** with the added length and width offers a faster glide at a comfortable stability. Ideal for heavier riders and for those wanting a stable race option.

The **11'6"x30"** with its shorter length is more adapt to lighter riders who want a board that is easier to maneuver on the water.

# 11'2" X 32" ASTRO BLEND

*"Ultimate travel companion"*

The ultimate transportable flatwater-to-wave crossover. The 2016 Blend has a wide tail for increased stability, a straight outline for a smooth and efficient glide and a pulled in nose that pierces through the water. The 32" width offers a stable and forgiving ride, while maintaining a fast top speed. This new shape combined with the new stiffer technology has given a significant improvement for this best selling model.

Featuring 3/4 EVA deckpad, paddle holder and bungee tie down for storage.

# 10'5" X 30" ASTRO DRIVE

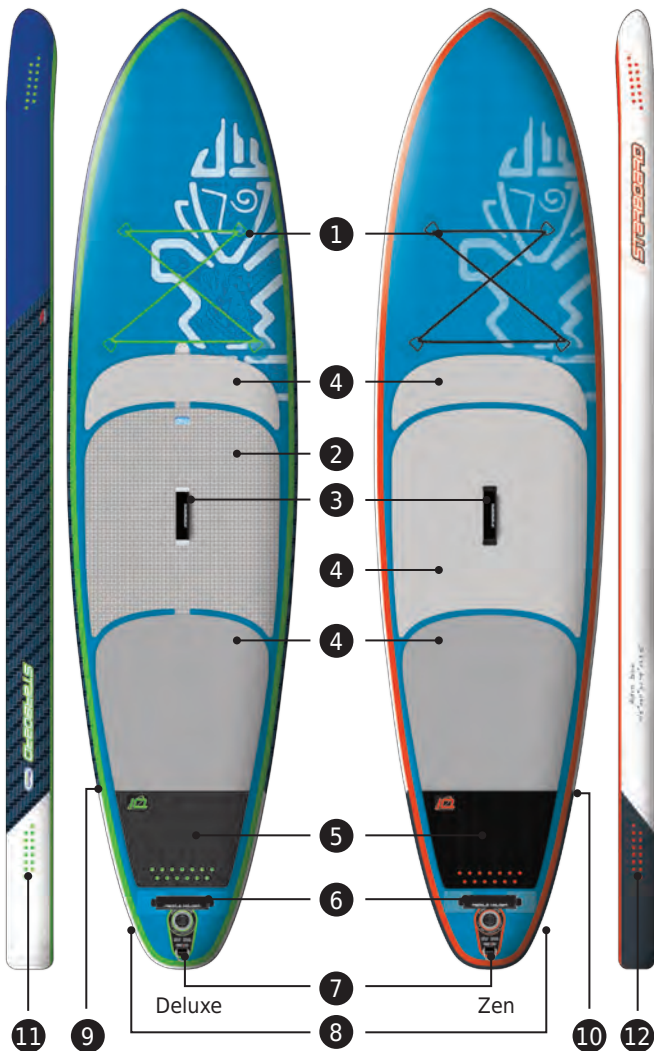

*"New shape for the perfect flatwater-to-wave crossover."*

The Drive is one of the most popular all-round boards for flat water cruising. Its narrow width allows for not only faster speed on flat water, but improved tracking, as the rider can hold the paddle at a straighter angle closer to the board. Its small length increases the maneuverability to explore narrower waterways, as well as having more control in the surf.

This shape has been updated with a new tail and nose shape to better work with Astro rail shapes.

Featuring 3/4 EVA deckpad, paddle holder and bungee tie down for storage.

**MAX RIDER WEIGHT**

## ASTRO WIDE POINT

*"Good glide, maneuverability and stability make it an easy option to get on the water."*

For years, the 10'5" Widepoint has proven to be an extremely popular shape. The same length as an all-round board, the Widepoint oozes great glide and cruising ability, while benefiting from extra width against the Blend and Drive models.

Suited for many uses, ages and abilities, the Widepoint is one of the most versatile boards in the range. If unsure on what board should be your first SUP, the Widepoint is the perfect one-board quiver that will let you and your friends enjoy time on the water.

## ASTRO SUP POLO

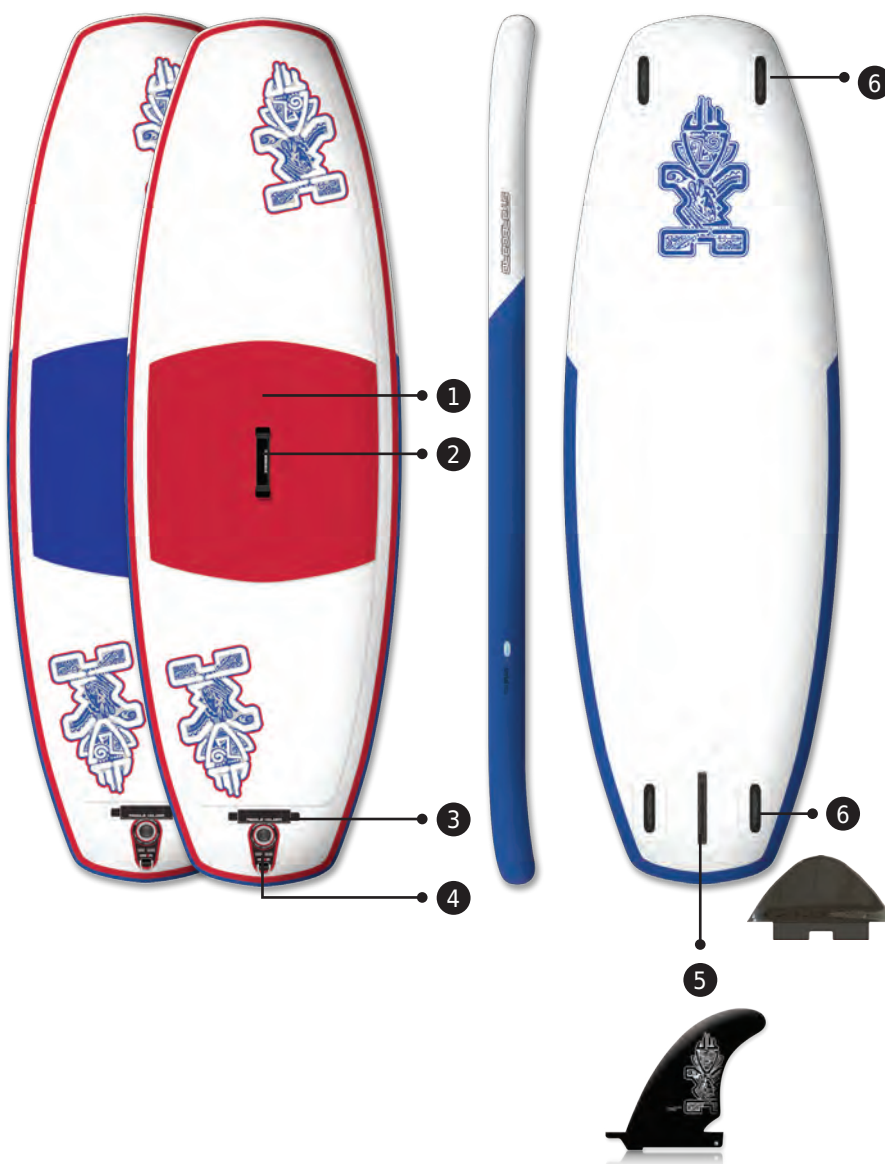

*"Combining the fun of team sports with SUP"*

SUP Polo is the new sport offered by Starboard in collaboration with "Wholypaddle", linking a watersport with a team game.

The SUP Polo 9'5" is short enough to have great control in the pool, but long enough to accelerate quickly.

The 36" width will give you plenty of stability to focus on the game without thinking too much on your balance. With SUP Polo, the situation can change very quickly, thus the board is designed with Twin Tip to be able to reverse in an instant without making risky snap turns.

A set of 2 white water fins are added to the nose and tail to give enough tracking in both directions, whilst still maintaining great control of the board. In addition, a 6<sup>3/4</sup>" Center fin has been added to provide additional tracking, making it a more versatile board for when you're not playing SUP Polo.

**MAX RIDER WEIGHT**

## ASTRO PADDLE FOR HOPE

*"The Astro Starboard Paddle For Hope 11'6" x 30" Touring, inspired by Karin Horen"*

*"The Paddle For Hope is a celebration of life. Our goal is to give back some strength and confidence to women who have been diagnosed with breast cancer, and give them the chance to start healing through paddleboarding."*

*- Karin Horen, Paddle For Hope Ambassador.*

Starboard International is donating all profit from sales of this board to Pinc and Steel to develop PaddleOn, a SUP rehabilitation program for men and women living with cancer.

The Astro Paddle For Hope follows the same outline as the composite version. The shape has been designed to match superior glide with stability.

Featuring 3/4 EVA deckpad, paddle holder and bungee tie downs for storage.

# 12'0" X 34" ASTRO SPORTSMAN

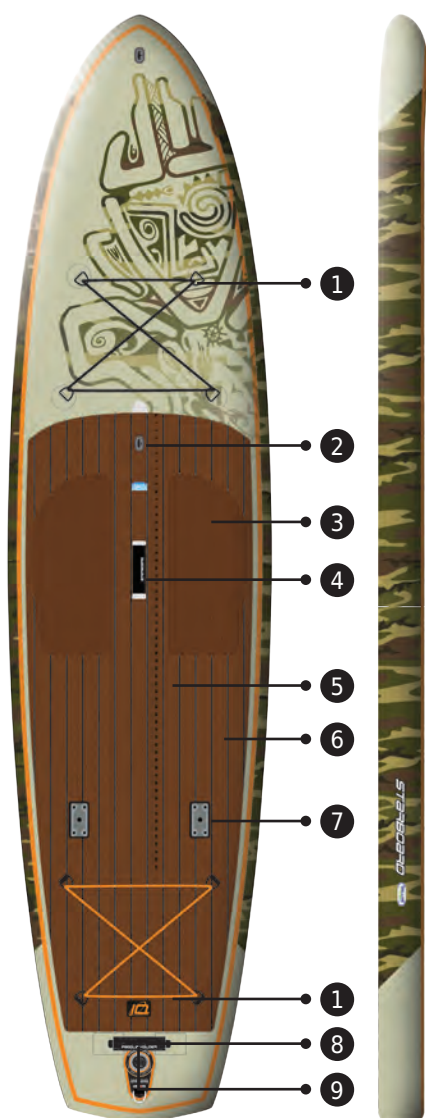

*"The world's ultimate mobile fishing craft."*

Whether it's shallow streams, narrow creeks or the open ocean, with the Astro Sportsman, all boundaries are broken opening up a world of fishing possibilities.

Ditch the expensive fuel and the noisy engine, instead increase your fitness and maximize portability to get on top of the catch.

At 12'0", the Sportsman enables you to cover distance with ease and speed. The 34" width provides the perfect platform to move around with confidence, while allowing efficient paddling and turning.

Equipped with bungee tie downs on the nose and tail, securely store all your gear and supplies in position. A 150cm Fish Tape is printed on the deck pad for quick access to measure the catch. The Deluxe technology with the dual stringer technology provides a stiff platform to reel in the big fish whilst keeping confidence in stability.

## ASTRO YOGA DASHAMA

*“The perfect size for stability, wide enough for all levels and easy to transport.” ~Dashama*

Dashama’s new inflatable sup yoga board is designed for the best possible user experience, offering the perfect platform for the rapidly expanding global sup yoga trend.

Every detail has been considered, from the full grip yoga mat deck pad, comfortable custom design bungee carrying strap, perfectly positioned Velcro paddle attachment, and fitness rings to further enhance the usage potential beyond yoga to Pilates and fitness markets!

Long enough to provide enough space to perform all yoga poses comfortably, while still having enough maneuverability to turn the board when paddling.

Dashama’s Be the Change Sup Yoga tour continues in 2016, including more countries hosting sup yoga retreats, classes and events, a rapidly expanding ambassador team, new videos and media content to share on and off line.

# INFLATABLE

Inspired by the success off the original 9'6" Astro Stream, the series has been extended for 2016 with 3 brand new models. Starboard has joined forces with whitewater pioneer Dan Gavere to create two new river running models: 8'6" and 11'0" to accompany the 9'6".

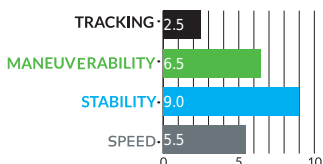

Packed with all the great Stream features, from reinforced carry handles on all corners, full EVA grip, D-Ring on hull side of nose for portability, the new range makes it even easier to have fun on the river. Our deluxe 2 plus 1 rail torsion band tech and biaxial stringer reinforces the rails, combining to make a stiff, twist free ride. The forward mounted half-moon whitewater quad fins are optimized for tracking and turning, all with minimal drag when navigating waves, holes, boils, eddy lines and everything else the river throws at you.

"The different sizes allow riders of any shape or size to experience how fun and easy whitewater sup can be" - Gavere on the new lineup.

# DAN GAVERE

## 11'0" X 34" ASTRO STREAM CROSSOVER

"Dedicated river racing performance"

At 11', the Crossover is designed inline with the Payette River Games board specifications, maximizing performance in river paddling. The Crossover is the best option for heavier riders wanting extra comfort from the added volume and longer length for a faster ground speed

# 12'0" X 28" OCEAN RESCUE

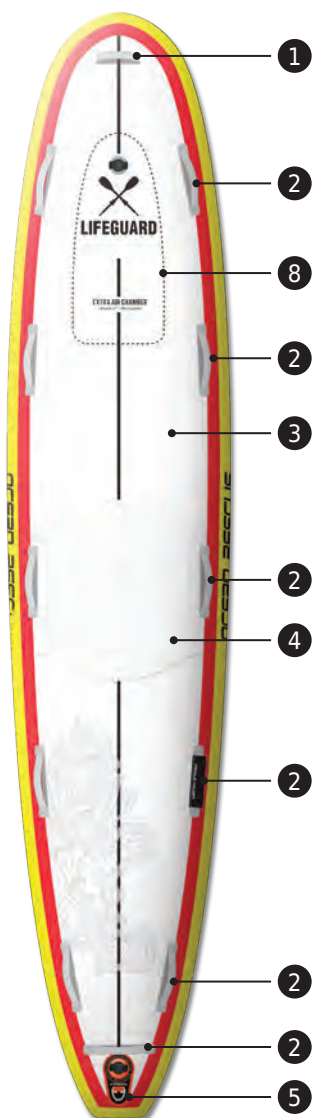

*"The safest and most innovative Ocean Rescue board in its class."*

To increase safety and to stay ahead of future regulations, we have created an extra chamber providing 300 Newton buoyancy (150 per person). Even if one chamber punctures, the craft will not sink. It has 12 handles to allow the distressed person to hold onto. The handles are made self-standing to ease the usage in any condition. Lifeguards can easily carry the rescued person on top of the board from water to vehicle. The double rail band technology makes the board even more robust with its .5+.7 mm rail thickness.

The 28" hull is narrow enough for prone paddling and knee paddling. The 6" linear dropstitch construction provides ample stability for stand-up paddling and patrolling. The 12'0" length offers great flat water speed and catches waves well. With its 315 liters it provides massive buoyancy for all types of rescue missions.

The board is robust, durable, light, strong, portable and speedy, all at the same time.

**MAX RIDER WEIGHT**

## ASTRO STARSHIP CLUB

*"The Starship is the ultimate 6 to 8 person team boards."*

With plenty of volume to accommodate up to 8 people, and a perfect slender nose outline and a low entry rocker, the Starship is designed for maximum stability and cruising efficiency. The Starship is a great option for families and friends to have one board that everyone can use and enjoy together, whether it's surfing, exploring or just having fun on the water. It's also a perfect tool for team building, as a Starship race requires coordination and communication to win. A thrilling experience that **MUST** be tried.

# 12'0" X 33" ASTRO ATLAS CLUB

*"Atlas just got stronger!"*

The Atlas is now available in the most robust and durable Astro Club Technology. At the heaviest in the range, the Club is built for maximum strength and resistance, a perfect option for schools, clubs and paddlers that want the strongest boards available.

The Club Technology is a great offering for families with kids that often drag or scratch the board over long periods of time.

The Atlas offers superior glide for an All-Round shape yet has a comfortable 33" width for the extra stability.

**MAX RIDER WEIGHT**

95 kg

**DIMENSIONS CLUB4.75"**

Length:	Width:	Thickness:	Tail Width:	Volume:
12'0"	33"	4.75"	17.5"	288 L
365.8 cm	83.8 cm	12.1 cm	44.5 cm	

**FEATURES**

- 1 Bungee straps
- 2 2mm EVA Crocodile skin
- 3 PVC handle
- 4 4mm EVA diamond groove
- 5 Neoprene Handle
- 6 Astro air valve
- 7 Center fin: 8" Black US Box
- 8 Side fins: Permanent fixed soft fins

## ASTRO WHOPPER CLUB

*"Whopper performance with the strongest technology."*

The highly popular Whopper is now available in the most robust and durable Astro Club Technology. At the heaviest in the range, the Club is built for maximum strength and resistance, a perfect option for schools, clubs and paddlers that want the strongest boards available.

The Club is a great offering for families with kids that often drag or scratch the board over long periods of time.

The Whopper is a favorite for its short length offering great maneuverability for efficient turning, while maintaining good glide for flat-water paddling. The 35" width makes it an extremely stable board for all to enjoy.

**MAX RIDER WEIGHT**

95 kg

**DIMENSIONS CLUB4.75"**

# ASTRO STARLIGHT

## STIFFEST

- Twin Dual Stringers on the deck for maximum stiffness.
- Carbon Rails and Rail stiffeners fitted for added rail stiffness.
- 6" (152 mm) Dropstitch with high density woven yarns cross-stitched to create the stiffest core.

## LIGHTEST

- No PVC Skin needed reducing the weight significantly.

## RAIL TECHNOLOGY

The Starlight has a Triple Rail Band with Carbon and rail stiffener.

**Compression Rail Band**  
0.5mm

**Airtight Inner Rail Band**  
0.5mm

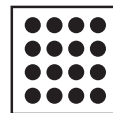

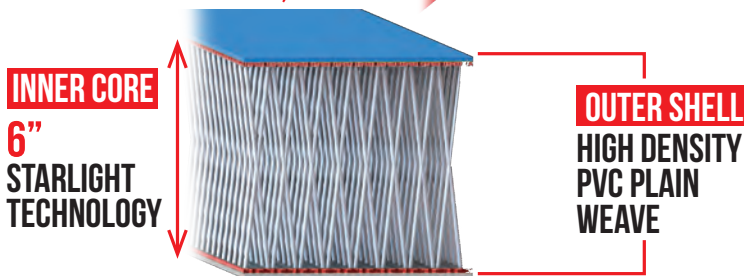

**PVC Outer Rail Band**  
0.7mm

**Carbon Outer Rail** for further stiffness and strength

**RAIL STIFFENER**

**Exclusive Rail Stiffener** for optimum stiffness

## HD DROPSTITCH

24,000 6" (152 mm) vertical yarns per squared meter, using a cross structure stitching for improved stiffness, connect the high density Dual Plain-Woven fabric. This offers a surface that is completely **flat and smooth**, unlike any other inflatable option on the market.

The Starlight technology uses superior woven **2500 denier fibers** laminated in a lighter, durable and more ecofriendly elastomer compound.

Starlight technology maximizes stiffness at the lightest possible weight that is truly groundbreaking in performance.

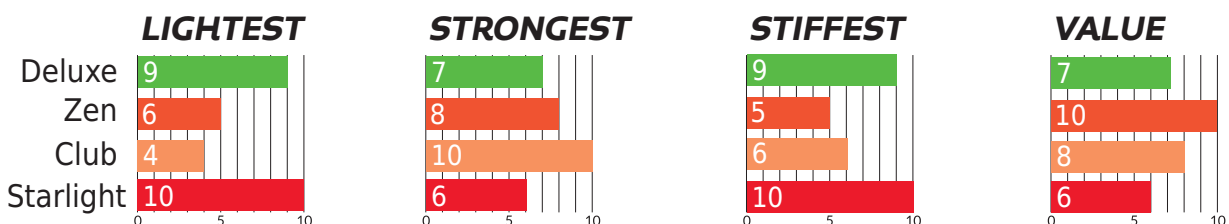

## ADDED FEATURES:

- We have stripped the Starlight of added features to save weight for increased performance and speed when racing.
- A 4mm EVA Diamond Groove Tail pad is fitted to aid buoy turns.

## FIN BOX:

New Universal US Center Fin Box to fit all sizes of fins. Short for easy board roll up. Supplied with Light Core fins.

## Available Models:

- 14'0" x 28" RACER
- 12'6" x 28" RACER
- 12'6" x 26" RACER

### V8 DOUBLE ACTION PUMP PRODUCT CODE 2000000001663

- Inflate your board faster and easier with continuous pumping cycles in both down and upward action.
- With a switch, the double action valve pump can convert to single action for easy inflation up to 18psi.
- The ergonomically designed foot base creates a stable, comfortable platform for sustained effort in getting your board up to 18psi, in the shortest amount of time.

### THE V8 EASY FLOW VALVE SYSTEM

- Allows effortless action due to the increased diameter of the intake and exhaust valve.

### NEW HIGH DENSITY PUMP HOSE

that is 20% faster and more efficient in inflation time.

V8 FLOW VALVE SYSTEM

### ELECTRIC PUMP PRODUCT CODE TBA

- The air flow is approx. 140 - 150 l/min
- Takes approx 3 minutes to inflate 18 PSI

### FCS BOX / DELUXE

Starboard Side fins fin box is streamlined to follow the foil of the fin and will accommodate any FCS Side fins fins.

### UNIVERSAL US CENTER FIN NEW

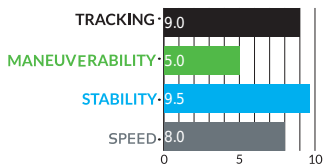

US Center fin fin box fits all universal Center fin fins. It is fitted on all Astro Boards and is short for easy roll up.

### GLUE ON / ZEN

High rake, low profile Side fins fins provide good tracking and folds easily with the board. Made of soft material and designed with round edges for maximum safety.

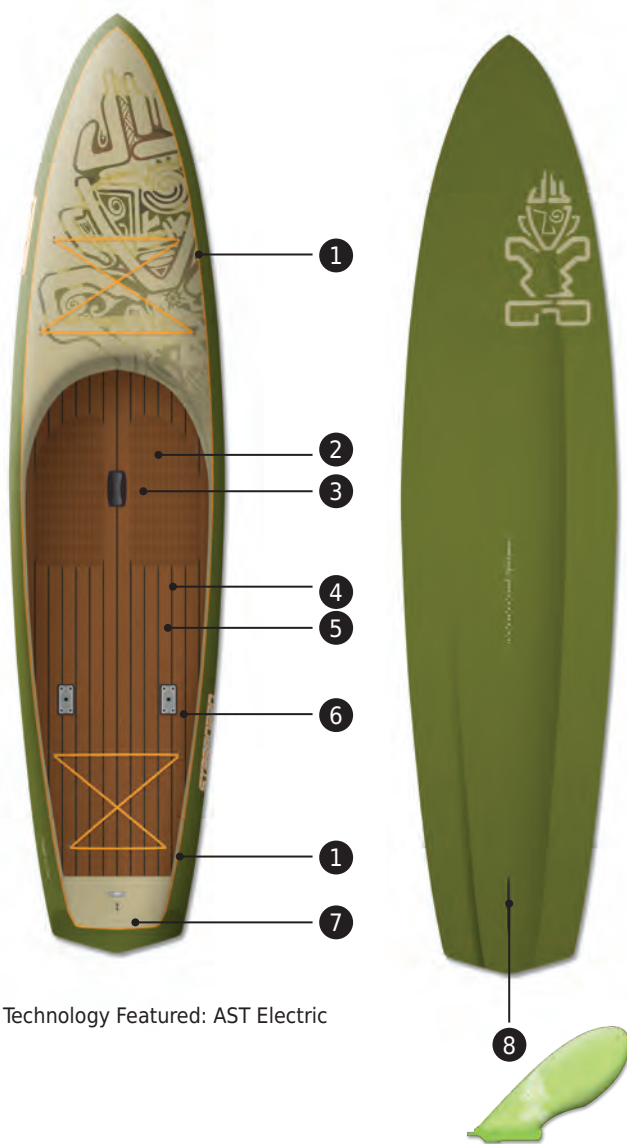

# 12'0" X 33" SPORTSMAN

*"The perfect match for that big catch"*

The Sportsman is all about reeling in the biggest catch of the day. Designed to cover distance and maintain a good ground speed, the 12'0' length is perfect in open ocean conditions. Inspired by the latest race designs, the new bottom shape is all about stability and speed. An ultra wide tail increases overall stability, whilst maximizing ability of movement and rotation when reeling in the big fish. A flat hull increases stability and reduces rail sinking, as well as allowing movement up and down the board. Additionally, the volume in the nose stops the board diving in chop and keeps it stable enough to power through rough conditions.

The Sportsman is the ultimate trawling fishing board. Stable enough to paddle while your rod is held in the Scotty Mount. Bungee tie downs help carry gear as well as multiple FCS inserts for different accessories.

# 10'6" X 24" ALL STAR JR.

*"A perfect board for future racers."*

We see younger athletes at every race, many of them using a board that is proportionally too big for them. The All Star Junior is aimed for kids up to 40kg who don't yet have the power to paddle a 12'6" board up to hull speed. It is perfectly dimensioned to get the best speed for kids' strength and to ride in all conditions without being overwhelmed by the power of wind and ocean.

**Race Ultra Light Core fin**

A perfect combination for creating a well balanced behavior in ocean swell and flatwater, with enough rake to go through seaweed.

ASAP	2001160401001
------	---------------

# BLUE CARBON

LIGHTEST WEIGHT, QUICKEST RESPONSE STRONGEST BUILD.

- Starboard Blue Carbon technology uses 15 kg/m<sup>3</sup> fused, precision molded Cellcore for light weight and water resistance. A full deck, bottom and rail wrap of high density PVC foam makes the board stronger for impact and hugely increases overall hull strength.
- The ultra light biaxial and unidirectional carbon fibers with optimized angles wrap the entire board, introducing flex and reflex patterns in paddle boarding.
- A well suited flex pattern with great reflex is essential for getting the most out of your wave riding. The sensational light weight increases carving ability and acceleration.
- The weight saving further allows you to paddle longer with less energy consumption.

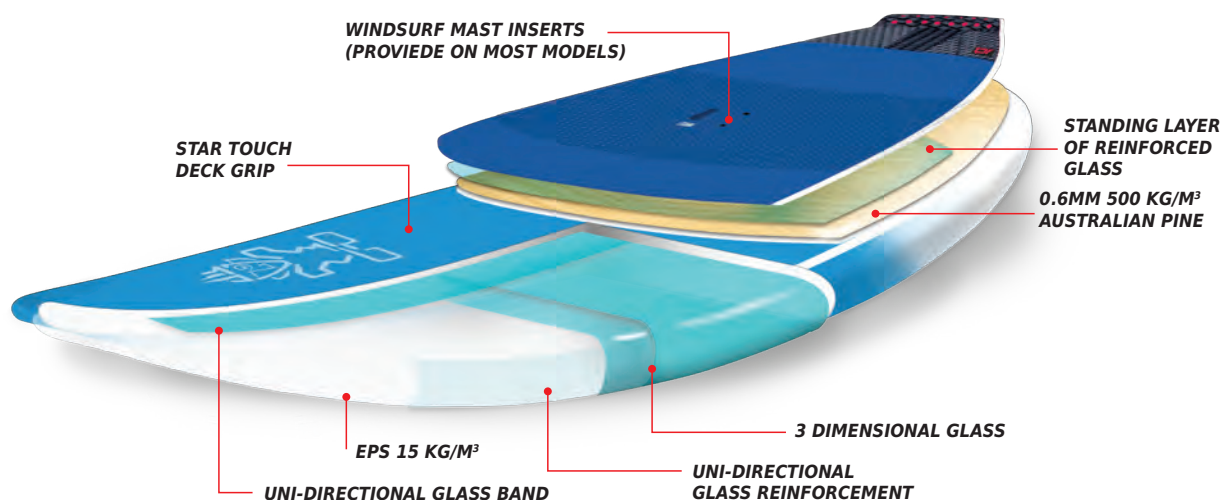

## IQ HANDLE

The solid, comfortable ABS inside handle is not part of board construction and does not affect the board construction.

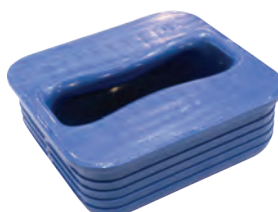

The large size, inside grip, allows for generous hand sizes and the board can be carried with great comfort.

# AST ELECTRIC

**DURABLE, TOUGH AND LIGHT. MOST MODELS ARE WINDSURFABLE.**

- The Advanced Sandwich Technology has a 15 kg/m<sup>3</sup> fused cell core for light weight and increased water resistance.
- A three-dimensional glass laminate is wetted out with high grade expanding epoxy resin, creating a thicker impact resistant outer skin with increased overall hull strength.
- A 500 kg/m<sup>3</sup> veneer of 0.6mm uni-directional Australian Pine forms an outer layer on the deck resulting in extra impact resistance, rigidity and further improved overall hull integrity.
- 300 grams uni-directional glass stringers are laminated flat on the deck and wrapped on fore rails in front of the standing area to support integrity while in surf conditions.
- Extra reinforcements are placed around all inserts, resulting in zero insert damage reports so far.

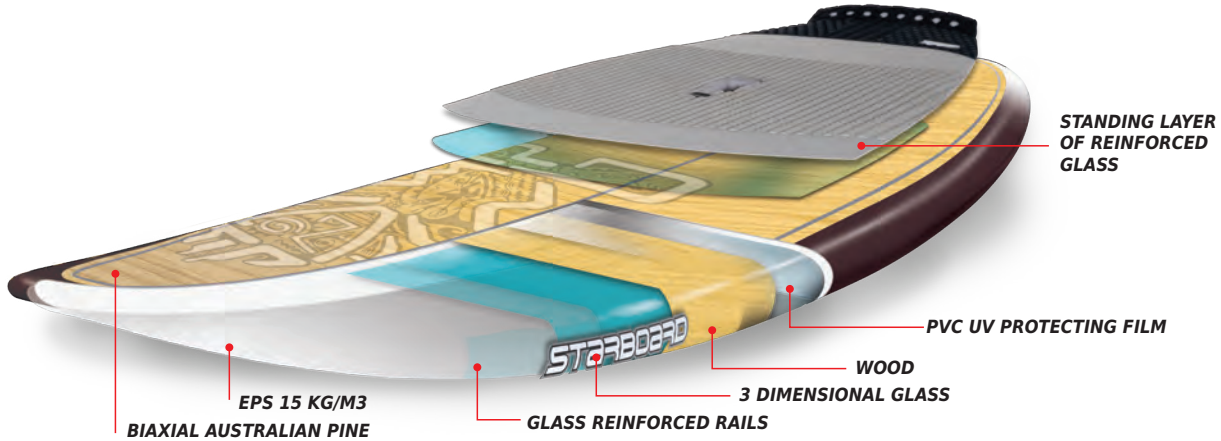

## IQ HANDLE

The solid, comfortable ABS inside handle is not part of board construction and does not affect the board construction.

The large size, inside grip, allows for generous hand sizes and the board can be carried with great comfort.

# WOOD

**STRONG, LIGHT AND EXCLUSIVE. THE ORIGINAL WOOD TECHNOLOGY SINCE 1994.**

- 15 kg/m<sup>3</sup> fused cell core for light weight and increased water resistance.
- A 500 kg/m<sup>3</sup> veneer of 0.6mm biaxial Australian Pine forms an outer layer on the deck resulting in extra impact resistance, rigidity and further improved overall hull integrity.
- A three-dimensional glass laminate is wetted out with high grade expanding epoxy resin. This creates a thicker impact resistant outer skin with increased overall hull strength.
- Glass rail reinforcements for extra stiffness against snapping when nose diving.
- Extra reinforcements are placed around all inserts, resulting in zero insert damage reports so far.
- Starboard pioneered moulded wood technology in 1994 and first introduced it to their Surf and Windsurfer board lines.

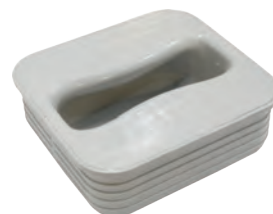

**ProTECT - UV** protective film protects Wood Technology boards from UV damage. More durable and a longer lasting wood finish.

**Without ProTECT film:** after several years of sunlight exposure.

**With ProTECT film:** more durability and a longer lasting wood finish.

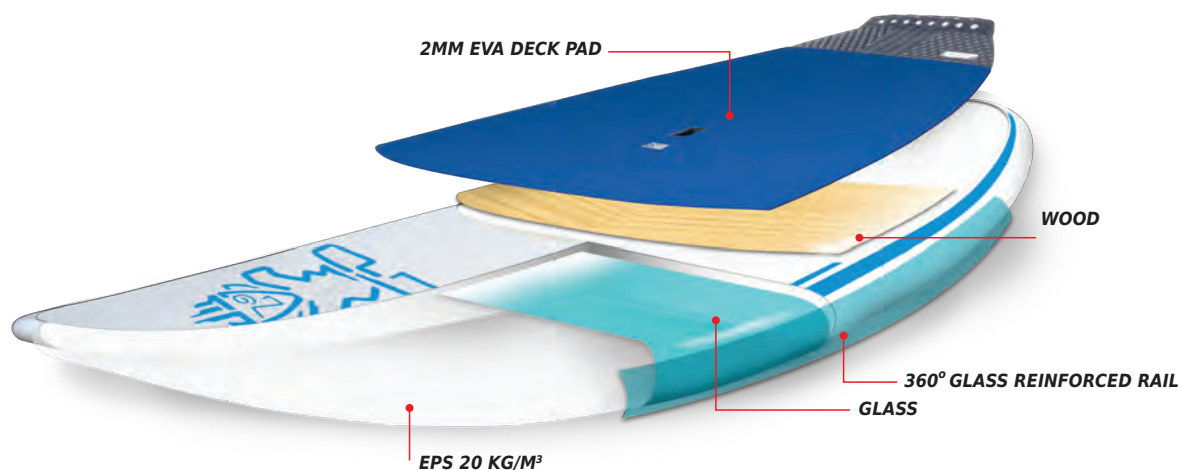

## IQ HANDLE

The solid, comfortable ABS inside handle is not part of board construction and does not affect the board construction.

The large size, inside grip, allows for generous hand sizes and the board can be carried with great comfort.

# STARSHOT

STARBOARD QUALITY AT AN ATTRACTIVE PRICE.

- 20 kg/m<sup>3</sup> fused, precision molded Cellcore for extra strength and water resistance.
- Multiple layers of high grade fiberglass is wetted out in epoxy resin, while a standing area of a 0.6mm uni-directional, Australian Pine wood layer is added for extra deck impact resistance and rigidity. All inserts have added reinforcements.
- 3600 glass reinforced rails.
- 3/4 deck pads with crocodile skin texture.
- Full gloss rails.
- Our boards are all precision molded and the compression during molding ensures an extra hard, strong and precise outer surface.

# INFLATABLE

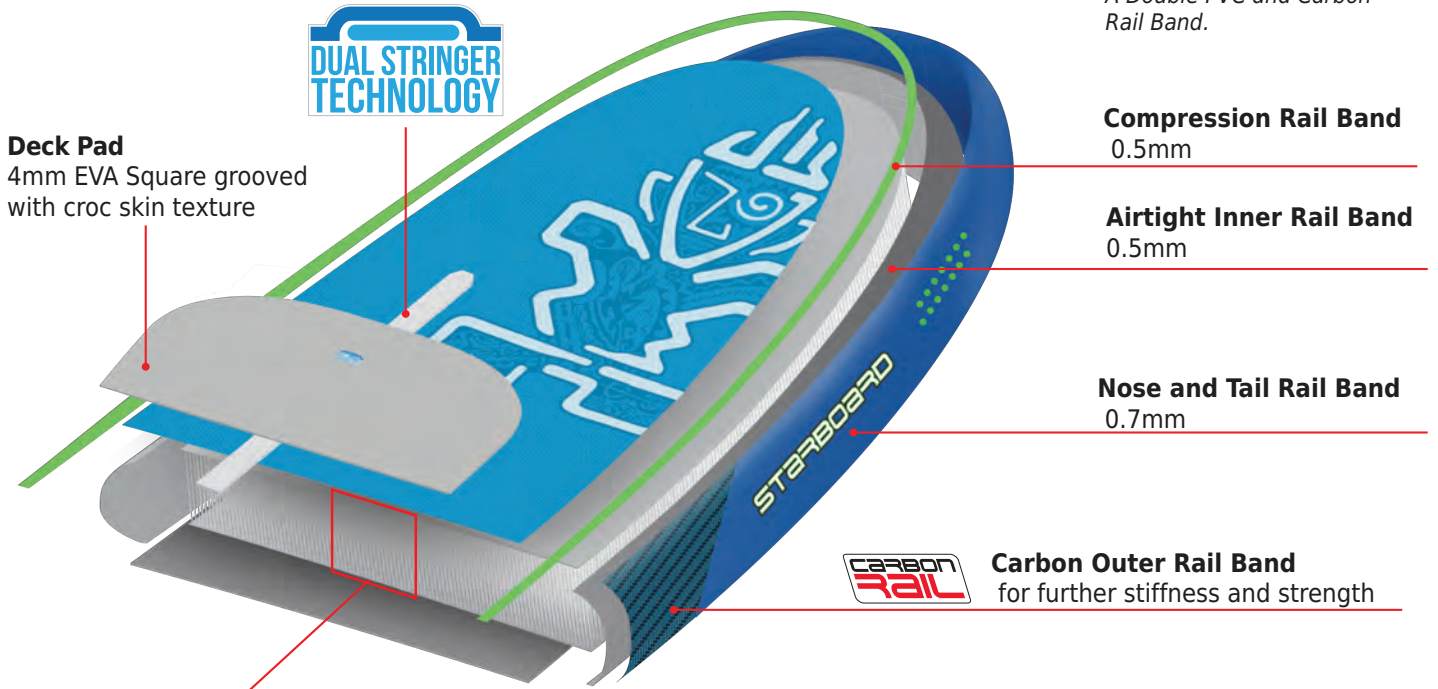

# ASTRO DELUXE

## MAGIC BAG

The Astro Magic Bag is truly functional, accessible and comfortable to take on every adventure, anywhere in the world.

### EXCLUSIVE HARD PLASTIC SHELL WITH ROLLER WHEELS:

Built using a strong high-density plastic core, the new Astro Compact Shell securely holds the board in a freestanding upright position, making it easy and quick to pack and comfortable to transport as the board is locked into position.

### STRAP FREE SYSTEM

The new Strap Free System allows you to carefully hide and store any excess straps when not carrying the board, perfect for storing the board and checking in baggage at the airport without fear of straps getting caught and damaged.

### HIKING STRAP DESIGN

Ergonomic shaped shoulder straps and waist belt make this bag comfortable to carry on any adventure, evenly distributing the weight of the board to reserve energy.

### MULTIPLE HANDLE MOUNTS

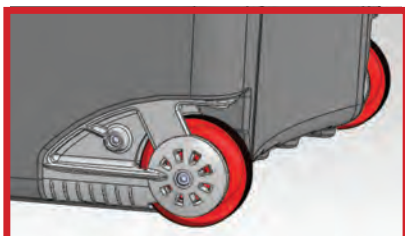

Multiple handles are fitted on the board to make it easy and quick to carry the board.

### EXTRA FEATURES

- Outside compression belt to keep bag compact
- Inside strap to hold the board in position
- Breathing Net to prevent build up of odors.
- Inside fin pocket storage
- Top Cover with Pocket (Only on Deluxe)
- Name Card Holder
- Full Plastic Non-Corrosive Zippers
- Durable 600x1000D Fabric
- Multiple handle mounts
- Full Side Zipper for easy loading.

Small: Board sizes up to 32" wide, all lengths. Total Bag height from floor 36" or 91cm

Large: From 33" up to 40" wide, all lengths. Total Bag height from floor 44" or 112cm

**TRAVEL PADDLE BAG** NEW

Roller wheels and two large separate compartments on the outside. Plenty of room for 15 paddles or use the extra room for clothing. The inside of the bag has been redesigned to offer extra storage compartments to fully use the capacity. A new PVC breathable air vent is fitted to ensure good airflow in the bag, to prevent a build up of odors.

### BEACH FLAG 80 x 440 cm **NEW**

New for 2016, the beach flag comes with either a cross-stand for indoor display, or with the standard metal stake for outdoor use.

It is also available as a complete set, delivered with both the cross-stand and metal stake for more versatility.

Further strength improvements have been made, including a stronger pole with better finish and a round-ball at the tip to prevent tearing the luff tube.

Reinforcement stitches have also been added to the tip of the flag to make sure the new 2016 Beach Flag stands tall over time.

# LIGHT CORE

Light Core composite fins are designed to maintain the flex characteristics of a fiberglass fin, whilst reducing the weight, but also maintaining strength. Available on Wood and Brushed Carbon as a center fin and side fins. On AST Electric and Astro Racer, center fin only.

## CENTER FINS

## SIDE FINS

# INJECTION MOLDED

Nylon with 30% fiber content, defined edges, and extra stiffness for performance. Available on AST Electric as side fins. Used for all fins in Starshot, ASAP and Astro models.

## CENTER FINS

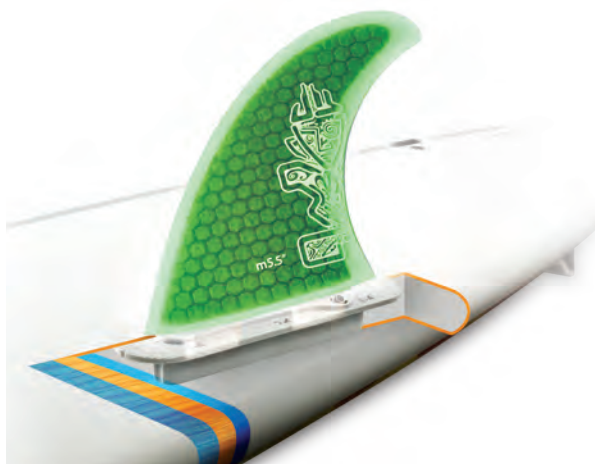

## SIDE FINS

# FIN DEVELOPMENT

Surfinz boxes allows for a degree of forward/aft movement to experiment with fin positioning. They are FCS compatible. They are available as side fin boxes in all our boards other than the Pro models.

**Critical factors are:**

- Base width providing drive for acceleration.
- Depth giving grip and hold.
- Sweep supporting pivoting.
- Foil creates speed and drive.

These culminate to provide the ultimate blend of a fin's characteristics suited to each particular board. Different boards require different fin configurations, whether it be quad or tri (sometimes both) as well as with various sizes (lengths and widths). The best combination has been tested for each of the boards throughout the range.

The Light Core composite fins are designed to maintain the flex characteristics of a fiberglass fin, whilst reducing the weight, also maintaining strength. It has been found that an optimum response/flex for SUP's of shorter length and larger waves are the stiffer Light Core fins for instant response.

The injection-molded (PA+GF 30%) fins provide the added flex found suitable for larger boards and smaller surf for a smoother sensation through the arc of a cutback.

## FCS II BOX

**LATEST IN DETACHABLE FIN SYSTEM TECHNOLOGY AND PERFORMANCE.**

\* Only available in PRO models as side fin boxes. Delivered with Starboard Light Core fins sporting standard FCS base.

- 1. Keyless** Efficient keyless system for quick fin installation and release.
- 2. Flush Leading Edge** Recessed leading edge with flush base connection improves water flow.
- 3. Backward Compatible** The FCS II System is backwards compatible with all your favourite FCS dual tab Fins.
- 4. The Mechanism** Constructed using a corrosion resistant titanium tension rod, and a rotating, wear-resistant polymer barrel.
- 5. Honeycomb Construction** Lightweight Composite Frame encapsulated by high density foam reduces weight and maintains flex.

## FIN SET UP

Most boards available with 1-5 Fin slots

**SINGLE**

Single fin provide the holding power to keep the tail of the board from sliding around.

**THRUSTER**

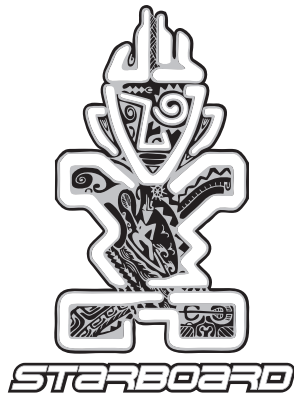

Offers riders a combination of stability and drive. Thrusters blend the maneuverability of twin fins with the hold of single fins to create a new type of performance.

**QUAD**

Increased speed, strong hold in hollow waves and high maneuverability.
